

Figure S9. Photomosaic and log of the east (a) and west (b) walls of T4b. (a) is similar to Figure 5, but includes an additional portion of the northern end of the trench wall and the locations of radiocarbon samples. The view of the southern wall of the trench has been rotated 90 degrees to align with the plane of the main wall (N/S, E/W illustrate the approximate orientation of each trench wall section). This perspective highlights the progressive southeastward dip of the lower subunits of unit 50.
