INTRODUCTION

A total of 1175 requests were received in 2007. This report summarizes the activity of the Insect Identification Laboratory at Virginia Tech for 2007. The laboratory is located in 205A Price Hall. It is managed by Eric Day, Lab Manager, and Doug Pfeiffer, Extension Entomologist, Department of Entomology.

Of the samples received in 2007, 90% of the samples, 1055 out of 1175, requested control recommendations.

Also from the samples received in 2007, 20% of the samples, 236 out of 1175, were forwarded from the

Plant Disease Clinic, managed by Mary Ann Hansen and Elizabeth Bush. The remaining 80% were sent directly.

Specimens are identified and recorded in the lab, then if necessary sent for control recommendations and additional comments from Extension Entomologists who handle particular commodity groups. All specimen data are entered into the Insect I.D. Lab computer data base on the Virginia Tech mainframe computer. The data base greatly facilitates sorting and storage of the information. Some of the records were sent via microcomputer to the Cooperative National Plant Pest Survey and Detection Program (USDA, APHIS, PPQ). We at Virginia Tech acknowledge support provided by this program.

Whenever possible insects are identified to the species level. Common names are used where possible because of their wide recognition. To facilitate mailing insects and insect damaged plant specimens to the lab, local offices of Virginia Cooperative Extension are provided with Insect Identification and Diagnosis Request forms (form 444-113), alcohol vials, and mailing tubes. Specimens also may be brought directly to the lab or mailed to:

Persons providing identifications and/or control recommendations:

Identifications and control recommendations covering most commodities performed by:

Mr. Eric R. Day

Manager, Insect Identification Laboratory

Timely and valuable identifications and/or control recommendations were also provided by:

Dr. Tom Kuhar	Assistant Professor of Entomology	Vegetable Pests
Dr. Richard D. Fell	Professor of Entomology	Apiculture and Stinging Insects
Dr. Dini Miller	Assistant Professor of Entomology	Structural and Household Insects
Dr. Ames Herbert	Associate Professor of Entomology	Soybeans, Small grains, Peanuts, and cotton
Mr. Steve Hiner	Technical Support Staff	Aquatic Insects and Invertebrates
Dr. Michael Kosztarab	Emeriti Professor of Entomology	Scale Insects
Dr. Theresia Dellinger	Post-Doctoral Staff	Entomology
Dr. Douglas G. Pfeiffer	Professor of Entomology	Fruit and Nuts
Dr. Scott Salom	Associate Professor of Entomology	Forest and Conifer
Dr. Peter Schultz	Station Director, Hampton Roads	Ornamentals
Dr. Paul J. Semtner	Professor of Entomology	Tobacco

Dr. J. Reese Voshell	Professor of Entomology	Aquatic Insects
Dr. Roger Youngman	Associate Professor of Entomology	Corn, Small grains, and Livestock

SURVEY PROGRAM

2007 TRAPPING SURVEY FOR EXOTIC BUPRESTID BEETLES IN VIRGINIA CURRENT STATUS: Trapping is complete and no exotic Buprestid beetles were found. Project Coordinators: Eric R. Day, VPI&SU. Bernetta Barco, USDA/APHIS/PPQ. Debra Martin, VDACS. Objective: Survey of select oak forests near ports of entry for exotic Buprestid beetles with particular emphasis on *Agrilus biguttatus*. Benefits/Justification: *Agrilus biguttatus* or the Oak Splendor beetle is not known to occur in North America but its introduction could have a huge impact on hardwood production and the nursery and landscape business similar to effect of the Emerald Ash Borer. Materials and Methods: Buprestid beetles were trapped with a tree silhouette trap developed by Jason et al. (2004 ESA Poster). This silhouette trap consists of a strip of pink duct tape coated with a sticky material. This tape was fastened to an upright metal pole. This additional trunk trap was placed in the same general area as the silhouette traps but did not yield significant numbers of buprestid beetles. Traps were checked monthly and were covered with a clear plastic covering and returned to the lab so the beetles could be removed with a non-destructive solvent. Initially specimens will be stored in alcohol but were later transferred to pins. Sites selected were an oak planting or natural setting with 3 or more oak trees (*Quercus sp.*) near a foreign source of wooden shipping material. Survey sites were near warehouses that receive wood crating, pallets, and dunnage from foreign sources, and businesses that receive material in wooden crates. See list below:

Virginia Inland Port	Port of Entry
Alban Bus Depot	Near EAN site
Sully Plantation	Near EAN site & Dulles Int. Airport
Atlantic Landfill	EAN site
Port of Richmond	Port of Entry
Fort Eustis	Port of Entry, near EAN site
Newport News Mar. Term.	Port of Entry
Norfolk Int. Terminal	Port of Entry
Hampton Roads AREC	Experiment Station, near EAN site

Both types of traps were set up in February and removed in November. Traps were checked and replaced every 4 weeks. Traps were serviced and processed by VPI&SU. Results: All collected buprestids will be screened and no *Agrilus biguttatus* were found. An unusual number of *Chrysobothris chryseola* were found and these were sent to the Smithsonian for confirmation. Several other buprestid beetles not represented in the Va Tech Insect Collection will also be shipped to an appropriate specialist for determination. All survey data from the survey will be entered into the NAPIS database. First record for the State and/or County will be entered within 48 hours of confirmation of identification by a qualified identifier. All other required records, both positive and negative, will be entered within two weeks of confirmation. All records were entered into the NAPIS database.

2007 CAPS SURVEY FOR EXOTIC LEPIDOPTERA IN FIELD CROPS. Current Status: TRAPPING IS COMPLETE AND NONE OF THE TRAGET EXOTIC SPECIES WERE FOUND. Project Coordinators: Eric R. Day, VPI&SU (Virginia Tech) OBJECTIVES: Survey using pheromone traps and visual inspection for Silver Y Moth (*Autographa gamma*), Egyptian Cottonworm (*Spodoptera littoralis*), Cotton Leafworm (*Spodoptera litura*), Old World Bollworm (*Helicoverpa armigera*), and soybean pod borer (*Maruca vitrata*). These pests have the potential to establish and become pests in Virginia and early detection would aid eradication and pest management programs. Materials and Methods: Supplies: Trapping supplies for field surveys: Pheromones and wing type

pheromone traps, vial, plastic bags. There were a total 12 counties with one soybean field site each. Counties/Cities (Traps and Sites): Surry, Suffolk, Southampton, Essex, Richmond (County of), Westmoreland, King and Queen, King William, and Caroline. Each site had 4 traps for a total of 48 traps. Each site had one 1-C wing trap for each pest species listed above and serviced about every two weeks. Visual survey of 50 random plants in soybean fields will be done each visit, after pod set, to check for soybean pod borer at each site. Sites were set-up between June 27 and August 15. All traps were removed from the field by early October. Screening of the trap samples was done by staff at the Insect Identification Laboratory and no suspect moths were found. Survey protocol is similar to the 2005 survey in Maryland for the same target pests. All survey data from the survey was entered into the NAPIS database.

FUNNEL TRAP SURVEY FOR EXOTIC LONGHORNED BEETLES AND BARK BEETLES IN VIRGINIA

CURRENT STATUS: THE TRAPPING IS COMPLETE AND THE TRAPS HAVE BEEN REMOVED. NO SUSPECT CERAMBYCIDS WERE COLLECTED, IN ADDITION NO *IPS TYPOGRAPHUS* WERE FOUND.

Project Coordinators: Eric R. Day, VPI&SU. Bernetta Barco, USDA/APHIS/PPQ. Debra Martin, VDACS. **Objective:** Survey of warehouses and port facilities for exotic wood borers with particular emphasis on non-domestic longhorned beetles. In addition to survey **Hot Zone** sites identified by Emergency Action Notification (EAN) for exotic wood boring beetles and Siricids. **Benefits/Justification:** Current surveys in Virginia, conducted by APHIS and VDACS are looking for *Callidiellum rufipenne*, the Cedar longhorned beetle (CLHB) and the Asian longhorned beetle (ALB). CLHB is currently found in North Carolina and Connecticut and a survey is being conducted using cedar logs. ALB is found in both New York and Illinois and a survey using baited funnel traps at selected warehouses is being conducted by VDACS. *Monochamus alternatus* was considered by the Virginia State Survey Committee to be the most dangerous of the listed exotic cerambycids because of Virginia's pine based forestry industry coupled with international cargo ports of entry. Traps will be checked for all exotic beetles that have a potential of establishing in Virginia. This list includes *Anoplophora glabripennis* (the Asian longhorned beetle), *Anoplophora malasiaca*, *Callidiellum rufipenne*, *Hesperophanes campestris*, *Monochamus alternatus*, and *Ips typographus*, although traps will be baited specifically for *Monochamus alternatus*. **Materials and Methods:** Port sites, warehouses, and storage areas with a foreign source of wooden shipping material were selected for this survey. Survey sites included warehouses that receive wood crating, pallets, and dunnage from foreign sources. Lindgren funnel traps were placed at each site and baited with a commercial lure for bark beetles and longhorned beetles. Each trap was set up with dry collection baskets and a killing agent (Vapona). See below for trap location and dates.

Traps were placed in the following locations:

Atlantic Landfill 3 traps on the border of the facility, EAN site, 2/14/07 setup.

Fort Eustis 3 traps in wooded area with dead oaks and pines. 2/15/07 setup, Near EAN site, Port of Entry.

Hampton Roads AREC 2/15/07 setup, Experiment Station, near EAN site

Norfolk International Terminal – 6 traps in 2 buildings, 2/15/07 setup

Newport News Marine Terminal – 6 traps in 2 buildings, 2/15/07 setup

Richmond Deepwater Port – 1 trap in 1 building, 2/16/07 setup

Virginia Inland Port – 3 traps on the perimeter of the site, 2/22/07 setup

Sully Plantation – 3 traps on the border of the park near 2 EAN sites, 2/22/07

Alban Bus Garage – 3 traps on the border of the facility near 2 EAN sites, 2/22/07 setup

Screening of samples was done at VPI&SU and no suspect beetles were submitted to E. Richard Hoebeke for further identification, but a suspect Siricidae wasp was submitted and it was determined to be a native insect. All data regarding the target insects of this survey has been uploaded to the NAPIS. Additional non-target insects may be uploaded later. Work Plan: Monitoring agencies: Virginia Polytechnic Institute and State University (VPI&SU), Virginia Dept. of Agriculture and Consumer Services (VDACS). Supplies: 12-unit Lindgren funnel traps, lure, alcohol, vials, and other survey equipment.

II. UNFUNDED SURVEYS

SIREX SURVEY: Setup late June, takedown late fall

Virginia Inland Port	Port of Entry
Alban Bus Depot	Near EAN site
Sully Plantation	Near EAN site & Dulles Int. Airport
Atlantic Landfill	EAN site
Port of Richmond	Port of Entry
Fort Eustis	Port of Entry, near EAN site
Newport News Mar. Term.	Port of Entry
Norfolk Int. Terminal	Port of Entry
Hampton Roads AREC	Experiment Station, near EAN site

No exotic Sirex were found but 4 different native species were collected from several different sites. They were: *Sirex edwardsii*, *Sirex nigricornis*, *Urocerus cressoni*, and *Tremex columba*

BROWN MARMORATED STINK BUG SURVEY FOR VIRGINIA 2007 CURRENT STATUS: FOUR ADDITIONAL RECORDS WERE UPLOADED FROM SAMPLES SUBMITTED BY EXTENSION AGENTS. Those were for the counties of Craig, Albemarle, Amherst, and Campbell. Materials and Methods: Currently no formal survey is planned but positive data will be uploaded onto the NAPIS database as new records are received at the Insect ID Lab that.

STATE RECORDS FOR 2007.
