

## Acknowledgments

Firstly, I need to thank my parents, Gary and Karen Pryputniewicz, without whom I would not be here. I am extremely appreciative of my family's continuing encouragement and support in my endeavors.

Thanks to my advisors, Prakash Nagarkatti and Mitzi Nagarkatti, who allowed me to do research in their laboratories and who generously supported my research. Thanks also to Marion Ehrich and David Bevan, who provided much-needed perspective during our meetings and who helped me immeasurably with the writing of this work. Appreciation also goes to past and present graduate students in the Nagarkatti labs: Mona Hassuneh, Michael Bradley, Asimah Rafi, Arati Kamath, and Ahmet Zeytun.

I am much obliged to Amy Wood, a.k.a. "Mouse Wrangler," who kept my mice healthy until their time, Joan Kalnitsky, who patiently ran my many flow cytometry samples, and the secretaries in the Biology Department, who kept the paperwork flowing smoothly.

I could not have carried out my research without support; this work was supported, in part, through grants from the American Cancer Society, the National Institutes of Health, Sigma Xi, and the Graduate Research Development Project, generously matched by Dr. Joe Cowles, Head of the Biology Department.

Many thanks to Suzanne Braunschweig, Greg Wagner, Caroline Uhlik, Dave Bray, Muriel Lederman, Pat Bevan, Zeke Erskine, and all of my former students for helping me to be the best teacher I could be. Deep gratitude and friendship goes out to the many other people who helped to make my stay at VPI & SU a memorable one, including, but not limited to: Lucy Gray, Mary Schaeffer, Kent Carlson, David Mullins, Barbara Bennett, Rachel Kennedy, Hoon No, Hong Vu, Jennie Bandas, and all the biology graduate students at Virginia Tech.

Lest one be led to believe that no outsiders played a role in my graduate studies, I thank Jonathan Cohen, for always being available to commiserate about our respective graduate school experiences. I am also deeply appreciative of the moral support provided by Mark Bitensky, Tatsuro Yoshida, Debbie Gordon, Julia Mark, Madhavi Vedula, and Veronica Ludyanskaya during the multiple revisions of the manuscript. Lastly, but far from being least, much heartfelt appreciation to my best friends (and e-pals), Jonathan Skroch and Ken Marin, who provided me with an outsider's perspective, supported me in my toughest decisions, and are everything anyone could ever want in a best friend.
