Dr. Mildred T. Tate for their encourage	ement and guidance, to
Vision and a real way that was a way	The Control of the Control
	for their help in locating the
subjects in this study, to	for preparing this manu-
script, and to the homemakers and their	r husbands who were the subjects
Acknowledgement of indebtedness	is due to all of those who made
this investigation possible.	

CHAPTER I

INTRODUCTION

Since the middle of the nineteenth century, certain subjectmatter and experiences, now known as home economics, have been a part of the public school curriculum, first in elementary grades and later in high school.

The earlier work was vocationally slanted. Girls were allowed to spend some time cooking, sewing, laundering, and in other household tasks. As the high school movement developed in the United States, home economics became a part of the school curriculum and gradually moved from a tool subject to an integrated homemaking curriculum. Although the emphasis in home economics in high school classes has shifted from training in the skills to preparation for homemaking, learning to cook, to sew, and to perform household tasks are still of major interest to the girls and their parents for them in homemaking classes.

In a homemaking curriculum centered on preparing high school girls to meet the needs of today's families, all aspects of family living are taught in a well-balanced program. The program is supposed to deal with all types of family problems, and to recognize the changing technological, social, and economic conditions which affect every area of family living.

The question frequently is raised as to the comparative homemaking abilities of young women with and without home economics in high school. In other words are homemakers with home economics training in high school performing at a higher level of success than those without this training?

Since homemaking is a fairly expensive program, its justification centers in helping young people do a better job of establishing and running a home and family.

REVIEW OF LITERATURE

There are very few studies in the published literature which throw any light on this question.

Beverage¹, who made a study entitled, "A Comparative Study of Home Economics and Non-Home Economics Girls", found little difference in wardrobe content, attitude toward clothing, and clothing practices of home economics and non-home economics girls in the high schools studies. The home economics girls, however, rated significantly better on personal appearance than did the non-home economics girls. Also the home economics girls scored slightly better on total adjustment than non-home economics girls.

Beverage, Lucinda Hiner, A Comparative Study of Home Economics and Non-Home Economics Girls, M. S. Thesis, Virginia Polytechnic Institute, Blacksburg, Virginia, 1951.

Reid's² study of the clothing practices of urban high school senior girls found few differences existing between the home economics and non-home economics majors. More of the home economics majors liked to sew and did sew than was true of non-majors. The adequacy of the clothing care practices was in favor of the home economics majors, but there was not enough difference to be significant.

Hulst's³ study of wives of students at Virginia Polytechnic Institute found that there were only slight differences in the homemaking practices of those with home economics training as compared to those without. Her group was highly selective and represented only 45 in number.

Livesay's study of the activities and adjustment of 4-H Club and non-4-H Club members indicated that 4-H Club girls of the sophomore and junior high school age belonged to and participated in organized youth groups and household activities to a greater extent than did the non-club girls.

²Reid, Doris Jean, <u>A Study of Clothing Practice of Urban High</u>
<u>Senior Girls</u>, M. S. Thesis, Virginia Polytechnic Institute, Blacksburg,
Virginia, 1951.

Hulst, Dorothy Clark, A Study of the Problems of Homemaking Practices of Wives of Students at Virginia Polytechnic Institute, Blacksburg, Virginia, M. S. Thesis, Virginia Polytechnic Institute, Blacksburg, Virginia, 1957.

⁴Livesay, Lillian Roberts, The Activities and Adjustments of 4-H Club and Non-4-H Club Young Women of Amherst County, M. S. Thesis, Virginia Polytechnic Institute, Blacksburg, Virginia, 1949.

The club girls were significantly better adjusted and had a wider variety of interest than the non-club girls.

Although 4-H Club work is not a part of the homemaking program in high school it has many similarities to the high school program.

In view of the almost complete dearth of studies on the effect of homemaking education on homemaking and the extensiveness of the program, a study of the comparative homemaking abilities of home economics and non-home economics trained high school girls is apropo at this time.

PURPOSE OF THE STUDY

The purpose of this investigation was to study the adjustment and home management practices of two groups of homemakers, namely those with and those without homemaking education in high school. The two groups of homemakers were compared in the following activities:

- 1. Home Management Practices.
 - a) Use of Money.
 - b) Use of Time.
 - c) Division of Labor.
 - d) Responsibility for Decision Making.
 - e) Responsibility for Family Activities.
- 2. The adjustment of the homemaker and her husband.
- 3. Homemakers adequacy as reflected in
 - a) Feeding the family.
 - b) Housing the family.
 - c) Level of living.

CHAPTER II

PROCEDURE

SUBJECTS

The subjects used in this study were 31 young married homemakers living in Richmond, Virginia, all of whom graduated from John Marshall or Thomas Jefferson High School in the year 1949-50, none of whom attended college. Group I consists of the 18 homemakers who studied home economics in high school. Group II is made up of the 13 homemakers who did not have home economics training in high school.

Out of a possible sample of 100, 31 subjects completed all parts of the questionnaire, and therefore data for only 31 subjects were used in this study. Some possible reasons why more subjects did not complete the schedules are:

- The length of time required for filling out the questionnaire for the data was from five to six hours.
- 2. Several subjects moved and changed addresses.
- 3. After completion, the data were mailed to the author, and five of the subjects' data were lost in the mail.
- 4. The author was living in Blacksburg, Virginia and the subjects in Richmond, Virginia.
- An accident encountered by the author hospitalized her at the time the data were being collected.

COLLECTION OF DATA

The data were gathered during the summer of 1958 through the interview method and are composed of the following:

- 1. Activities, problems, and interests of homemakers.
- 2. Personality inventories of homemaker and her husband.
- 3. Husband's opinion of wife as a homemaker.

The data on the interests, problems, and activities of the homemakers, and the husband's opinion of his wife as a homemaker were recorded on schedules especially developed for this purpose. A copy of these schedules is included in the appendix.

The data on personality adequacy of husbands and wives were secured by the Johnson Temperament Analysis Inventory⁵.

ANALYSIS OF DATA

After the schedules were collected, the information was tabulated and summarized. Wherever advisable, the summarized data were analyzed statistically for significance by use of the chi square for goodness of fit⁶. The Johnson Temperament Analysis Inventory was analyzed by the

CHAPTER III

RESULTS

SUBJECTS

The subjects used in this study were 31 young married homemakers living in Richmond, Virginia, all of whom graduated from John Marshall or Thomas Jefferson High School in the year 1949-50, none of whom attended college. Group I consists of the 18 homemakers who studied home economics in high school, Group II is made up of the 13 homemakers who did not have home economics training in high school.

PERSONAL DATA

Personal data concerning the two groups of subjects has been summarized in Table 1.

been married are as follows: Group I, with home economics training in high school, was six years; Group II, without home economics training in high school, was five years. The average length of time the homemakers in this study knew their husbands before marriage was: Group I, three years; Group II, four years. The average age of the wife in Group I was 26 years and the average age of the husband was 28.

Group II: the average age of the wife was 25 years; the average age of the husband was 27. All of the subjects and their husbands in both groups were born in a city except one; she listed her birth as occur-

Ninety-four percent of the women surveyed in Group I and 84 percent in Group II were full-time homemakers after marriage. Other information concerning income, housing, charge accounts, insurance and investment is given in Table 1.

HOUSEHOLD ACTIVITIES

Table 2 is a summary of the household activities of the two groups.

A larger percent of those subjects who had home economics training in high school planned their housework by the week or by the month, than those who did not have home economics training in high school. Six percent more women in Group I enjoyed housework than in Group II. Women in Group I rated themselves more efficient in cooking and sewing. Ten percent more in Group I than Group II ate breakfast with their husbands. Fifteen percent more women in Group I than Group II prepared a hot lunch when they are alone or with the children. Eighteen percent more women in Group II employed household help than in Group I.

LEISURE TIME ACTIVITIES

A section of the questionnaire which the respondents were asked to complete in the study was devoted to leisure time activities. The information obtained was not sufficient to analyze. The reading material of the two groups in kind and amount of time spent in reading was approximately the same. The amount of time spent on vacations was approximately the same, and the vacation was usually spent with the family. The amount of leisure time per day was approximately the same and the manner in which leisure time was spent was the same. The daily pattern for leisure time was from none to seven hours and usually consisted of watching television, reading, sewing, relaxing, and playing with the children.

SOCIAL ACTIVITIES

A section of the questionnaire was devoted to social activities, but the data were not sufficiently detailed to analyze. Little or no differences were found in the social activities of the two groups. However the women in Group I took a more active part in church work, including regular church attendance for themselves, their husbands, and children, and also regular Sunday School attendance for family members.

HOME RELATIONS

When asked if they and their husbands enjoyed similar activities, 16 of the respondents in Group I and all of the respondents in Group II answered in the affirmative. All of the subjects in Group I and 12 of the subjects in Group II enjoyed the things that they did with their husbands better than the things they did alone. Agreement of the husband and wife most often occurred in the area of child development and handling of money. Seventy percent of the subjects of Group I and 80 percent of the subjects of Group II were completely satisfied with their marriage.

PERSONAL AND EDUCATIONAL IMPROVEMENT

When asked the question "why did or didn't you study homemaking in high school?", the following answers were obtained:

Group I (studied homemaking)

To learn to be a good homemaker	22%
Learn to cook	11%
Liked it	50%
Interested	33%
No information	11%
Group II (did not study homemak	ing)
Not interested	30%
Schedule would not permit	30%
Didn't feel the need	8%
Didn't realize the value of it	8%
Don't know, or no information	25%

These percentages do not add up to 100 percent, as some respondents gave more than one answer. Prior to 1948, major emphasis in home-

making was on clothing and foods; therefore it is not surprising that when the respondents were asked "what areas they found most helpful", they listed clothing and foods. Group I listed the following areas in which they did not receive help and in which they needed assistance: home management, budgeting, home and family relations, infant care, home nursing, interior decoration, and hobbies. Less than half of the subjects in Group I had work in child care in their home economics work in high school. Most of the subjects in both groups stated they had problems in feeding their children.

PROBLEMS OF HOMEMAKERS

In Table 3 are listed the problems encountered by homemakers in the two groups.

Question I, "Shyness in meeting people", as measured by the chi square test, was more often a problem for subjects in Group I than Group II. The same is true for question 4, "Attempting more than you can do", and question 6, "Loneliness". Group II more often found question 8, "Answering demands of the family and relatives", a problem. Group I more often found question 9, "Lack of intimate friends", a problem. Group II more often found question 10, "Quarrels with neighbors or associates", a problem. The same is true of question 13, "Getting tired or fatigued", and question 14, "In-law problems". Group I more often found question 15, "Budgeting time for recreation", a problem. Group II more often found question 17, "Feeling failure easily", a problem.

The same is true of question 18, "Health of husband". Group I more often found question 19, "Lack of self-confidence", a problem. The same is true of question 20, "Lack of convenience or unsatisfactory housing conditions", and question 23, "Insufficient money for self". Group II, more often found question 25, "Fear of nervous breakdown", a problem. Group I more often found question 26, "Fear of becoming bored with marriage", a problem. The same is true with question 27, "Not having own income". Group II more often found question 29, "Lack of common interest or mutual friends with husband", a problem. Group I more often found question 34, "Disagreement with husband over religious problems or views", a problem. The same is true with question 35, "Guidance of children", question 36, "Demands of children", question 37, "Disagreement with husband over handling children".

The problems most often encountered by the subjects in Group I were listed as (1) shyness in meeting people, (2) attempt more than you can do, (3) loneliness, (4) lack of intimate friends, (5) budgeting time for recreation, (6) lack of self-confidence, (7) too much time on hands, (8) lack of convenience or unsatisfactory housing conditions, (9) insufficient money for family needs, (10) fear of becoming bored with marriage, (11) not having own income, (12) disagreement with husband over religious problems or views, (13) guidance of children, (14) demands of children, and (15) disagreement with husband over handling children.

The problems most often encountered by the subjects in Group II were listed as, (1) quarrels with neighbors or associates, (2) getting

tired or fatigued, (3) in-law problems, (4) feeling failure easily, (5) health of husband, (6) fear of a nervous breakdown, and (7) lack of common interest or mutual friends with husband.

INTERESTS OF HOMEMAKERS

Table 4 is a comparison of the interests of the homemakers in the two groups.

Question 3, "To be able to understand other people's motives", as measured by the chi square test was more often of greater interest to the subjects of Group I than Group II. The same is true for question 6, "How much the husband should help with household activities to make for the most satisfying homelife"; question 11, "In what an individual should invest his money to insure a reasonably safe return"; question 14, "When should children be permitted to buy their own clothes"; question 15, "How much spending money children should have at various age levels"; question 16, "How to get children to eat the foods they should eat"; question 17, "What effect the wife working outside the home has upon successful family relationships"; question 18, "What the vocational opportunities for married women are"; question 23, "How to plan recreation for the family"; and question 25, "When and how to give sex training to young children".

In all cases where there was a significant difference as measured by the chi square test, it was due to increased interest of Group 1 of these items of interest. Since all of these items are topics of discussion in some areas of home economics, it is probable that these

interests were quickened or formed from the study of home economics.

HUSBAND'S OPINION OF WIFE AS A HOMEMAKER

Table 5 is a comparison of the husband's opinion of his wife as a homemaker for the two groups of homemakers.

The husband was asked his opinion of his wife as a homemaker, as measured by 32 items. Of the 32 items there was a significant difference in the manner in which the husbands scored the homemakers of the two groups. In 18 cases Group I scored significantly higher on item 1, "Your wife handles money wisely"; item 2, "Your wife takes advantage of money saving opportunities"; item 5, "Your wife seems satisfied with your job and the money you earn"; item 8, "You and your wife agree on the disciplining of your children"; item 9, "Your wife greets you in a pleasant, affectionate manner when you return home from work"; item 12, "Your wife enjoys the activities which you enjoy"; item 13, "Your wife is considerate of your parents"; item 15, "Your wife is a good cook"; item 17, "Your wife assumes the responsibility for religious activities of the family"; item 18, "Your wife discusses family matters with you before decisions are made"; item 19, "Your wife enjoys discussing business affairs with you"; item 30, "Your wife observes special days and anniversaries in the family"; item 31, "Your wife expects you to help with the housework"; and item 32, "Your wife approves of you as a husband".

JOHNSON TEMPERAMENT ANALYSIS FOR WIVES

Table 6 is a comparison of certain traits as measured by the Johnson Temperament Analysis for two Groups of Homemakers.

Nervousness

As measured by the chi square test, the homemakers with home economics training scored significantly higher. Fifty-six percent were rated as "excellent" in regards to this trait; only 30 percent of the homemakers without home economics rated as "excellent" in regards to this trait.

Depressiveness

Likewise the homemakers in Group I showed much more acceptable behavior in regards to this trait than the homemakers in Group II.

Active

No significant difference was found concerning this trait as measured by the chi square test.

Cordial

A highly significant difference was found between the two groups for this trait. Thirty-three percent in Group I scored "excellent"; only 18 percent in Group II received this score.

Sympathetic

Thirty-eight percent in Group I scored "excellent" in this trait; only 32 percent in Group II scored "excellent" in this trait.

Subjective

The subjects in Group II scored significantly better in this

area than Group I. Thirty-nine percent in Group II scored "excellent"; only 33 percent in Group I.

Critical

The subjects in Group II received a better score, highly significant in this area.

Self-Mastery

No significant difference was found in this area.

JOHNSON TEMPERAMENT ANALYSIS FOR HUSBANDS

Table 7 is a comparison of certain traits, as measured by the Johnson Temperament Analysis, of the husbands of two groups of homemakers. The hsubands were divided into two groups: Group I were husbands of the wives with home economics training in high school; Group II were husbands of the wives without home economics training in high school.

Nervousness

Like their wives the husbands in Group I scored significantly better for this trait.

Depressiveness

Also like their wives the hsubands in Group I showed better adjustment in this area.

Active

Husbands in Group I scored significantly more acceptable concerning the temperament trait "active".

Cordial

Husbands in Group I were significantly more cordial than those

in Group II.

Sympathetic

Husbands in Group I more often rated "excellent" in this trait than did the husbands in Group II.

Subjective ...

Like their wives the husbands in Group II scored significantly more acceptable in this area of "subjectivity".

Aggressive

Although there was no significant difference in "aggressiveness" of the two groups of wives, the husbands of women in Group I scored significantly better in regards to this trait.

Critical

Like their wives the husbands in Group II showed a significantly better rating in regards to this temperament trait.

Self-Mastery

There was no significant difference between the two groups in the measurement of this temperament trait.

COMPARISON OF THE PERSONALITY SCORES OF THE HUSBANDS AND WIVES OF THE TWO GROUPS

Scores for the husbands and wives of each group for each trait were similar except in the following instances:

 No difference was found for the temperament trait "active" for the wives of both groups. For the husbands, the men in Group I rated significantly higher. 2. No difference was found between the women in Group I and
Group II regarding "aggressiveness". The behavior of the
husbands of wives in Group I was scored significantly better.

CHAPTER IV

SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

SUMMARY

The purpose of this investigation was to study the adjustment and home management practices of two groups of homemakers, namely those with and those without home economics education in high school. The two groups of homemakers were compared for, (1) home management practices, (2) adjustment of the homemaker and her husband, and (3) homemaking adequacy as reflected in feeding and housing the family and level of living.

The subjects used in this study were 31 young married homemakers living in Richmond, Virginia, all of whom graduated from John Marshall and Thomas Jefferson High School in the year 1949-50, none of whom attended college. The subjects have been divided into two groups; Group I consists of 18 homemakers who studied home economics in high school, Group II is made up of the 13 homemakers who did not have home economics training in high school.

The data were collected during the summer 1958 through the interview method and are composed of, (1) interests, problems and activities of homemakers, (2) personality inventories of the homemaker and her husband, and (3) husband's opinion of wife as a homemaker. The data on activities, problems, and interests of the homemakers and the husband's opinion of his wife as a homemaker were recorded on schedules

especially developed for this purpose. The data on personality adequacy of husbands and wives were secured by the Johnson Temperament Analysis Inventory, A. After the schedules were collected the information was tabulated, summarized, and analyzed statistically for possible significance. The Johnson Temperament Analysis was analyzed by the use of the manual provided for this purpose, and then the results were analyzed statistically.

The two groups of women were similar in age, education, and number of children. The household activities of the subjects in Group I were rated superior to those of the subjects in Group II. The leisure time, and social activities of the two groups were very similar. Home relations of the two groups were also similar.

The subjects in Group I felt that a wider range of subject matter in their high school home economics courses would have been beneficial. This group of women listed the following additional areas of home economics in which they needed assistance: home management, budgeting, home and family relations, infant care, home nursing, interior decoration, and hobbies.

The problems most often encountered by the subjects in Group I were: (1) shyness in meeting people, (2) attempt to do more than you can do, (3) loneliness, (4) lack of intimate friends, (5) budgeting

⁵Johnson, Roswell H., <u>Manual of the Johnson Temperament Analysis</u>, Galifornia Test Bureau, 5916 Hollywood Boulevard, Los Angeles 28, California, 1944.

time for recreation, (6) lack of self-confidence, (7) too much time on hands, (8) lack of conveniences or satisfactory housing conditions, (9) insufficient money for family needs, (10) fear of becoming bored with marriage, (11) not having own income, (12) disagreement with husband over religious problems or views, (13) guidance of children, (14) disagreement with husband handling children.

The problems most often encountered by the subjects of Group II were: (1) quarrels with neighbors or associates, (2) getting tired or fatigued, (3) in-law problems, (4) feeling failure easily, (5) health of husband, (6) fear of a nervous breakdown, and (7) lack of common interests or mutual friends with husband.

Of the 25 items listed as considered to be of interest to homemakers, in 10 items the homemakers in Group I expressed a significantly higher interest than the homemakers in Group II.

The husbands were asked to score the homemaking ability of their wives using 32 items. In 18 cases the subjects in Group I were rated significantly higher than the subjects in Group II.

When the temperament of the two groups of women were measured by use of the Johnson Temperament Analysis, the traits of "nervousness", "depressiveness", "cordiality", and "sympathetic" were rated as significantly more acceptable for the women in Group I. The traits of "subjectivity", and "critical" were rated as being significantly more acceptable for subjects in Group II. No significant differences were found between the two groups for the traits, "active", "aggressive" and "self-mastery".

When the husbands of the two groups of women were scored for personality using the same test, the husbands scores were similar to those of their wives except that the husbands in Group I rated significantly better for the traits "active", and "aggressive".

CONCLUSION

If the responses of these subjects are typical of the responses of other homemakers, home economics education at the high school level has a marked beneficial influence on homemakers in their personal, home and family life.

RECOMMENDATIONS

The following recommendations are made:

- 1. Since the schedules used in this study were so lengthy the writer recommends that they be revised, so that the homemaker may furnish pertinent information with less time involved. This revision would be a great help in getting response from a larger number of subjects.
- 2. Since such a small sample was obtained in the study, the investigator would recommend the use of a larger sample and a sample from rural as well as urban schools.
- 3. Since the teaching of home economics at the high school level has been considerably broadened in the past 10 years, a study of home-makers who have graduated more recently than the ones used in this study is recommended.

32.	Your wife approves of you as a hus- band.				

JOHNSON TEMPERAMENT ANALYSIS

Devised by Roswell H. Johnson

Directions

DO NOT OPEN THIS BOOKLET UNTIL YOU HAVE READ ALL OF THESE DIRECTIONS

- 1. You are not to write or mark on this booklet in any way, but you will indicate your answers on the machine-scoring answer sheet as explained below.
- 2. All of the questions of this analysis refer to the person about whom they are being answered. This person is called S, or the subject. These questions do not apply to any other person who may be describing this person, S, the subject.
- 3. The words, "he" "him" or "his", mean the subject, whether a man or woman.
- 4. Be sure you understand each question; read it twice if necessary. Please answer every question; you can give your opinion if you are uncertain about the answer.
- 5. Do not think too long about any one question; answer as soon as you have thought it through and then go on with the next question. Consider this person from the viewpoint of "knowing him as I do, I think that in the given situation, the answer would be," and then mark it.
- 6. When an answer would be different if one considered the past rather than the present, answer as of the present, unless the question expressly refers to the past.
- 7. On the answer sheet you are given three columns in which to mark your answer as follows:

PLUS (+) means "decidedly yes" or "mostly so".

MID. means "undecided"; neither definitely yes nor no.

MINUS (-) means "decidedly no" or "mostly not so".

Please do not mark the MID. column, unless the answer really belongs there to describe this person, S, the subject.

- 8. Your answer to each question is indicated by making a pencil mark within the pair of dotted lines in the column which will show your answer. Be sure that the number on the answer row is the same as the number of the question in the booklet.
- 9. Keep your answer sheet on a smooth, hard surface while marking your answers. Each pencil mark should be a heavy, black line filling the space within the pair of dotted lines. When the answers are to be machine scored, you will be supplied with a special electrographic pencil which is required for this purpose.
- 10. If you change an answer, erase your first mark completely.
- 11. Explanations or other comments are desirable and may be recorded on the reverse of the answer sheet, but not elsewhere.
- 12. Now, you are to write clearly or print your name and other requested data in the spaces provided on the answer sheet;—then, you will open the booklet to the first question; find answer row number 1 on your answer sheet; and proceed until you have finished the booklet.

Questions

Mark your answers on the answer sheet. Do not mark on this booklet. Write any comment you care to make on the back of the answer sheet.

- 1. Does S want no more than two children in his family even though his health and income are satisfactory.
- 2. Is one motive for S to go places so that he can talk about having been there?
- 3. Is S relatively calm when others are getting rattled?
- 4. Does S think the government is spending too much on relief and pensions?
- 5. Does S resent efforts of others to tell him what to do?
- 6. Does S make a considerable use of the telephone, dictionary, or atlas when not necessary?
- 7. Does S sometimes have sudden unexpected jerks of some of his muscles even though nothing has happened?
- 8. Is S very eager to have his own business, or be an independent professional man, or if in an organization to be in a position to give orders rather than to take them?
- 9. Does S write in for samples, catalogs, solve puzzles, or submit questions to radio programs at times?
- 10. Is S easy-going in the matter of discipline?
- 11. Does S tend to say what comes to mind without enough thought as to whether it would be better left unsaid?
- 12. When hunting or fishing is S free from concern about the pain he inflicts on game, live bait, or fish?
- 13. Does S usually try to avoid being made a chairman of a committee or an officer of an organization?
- 14. Does S give in or stop during a controversy to "keep the peace"?
- 15. Does S have a voice that flows evenly and smoothly?
- 16. Is S inclined to say little except in response?
- 17. Does S have jerking motions of some muscles when unexpected things happen?
- 18. Is S considerate in his demands on employees, relatives, or pupils?
- 19. Does S talk slowly (making due allowance for age)?
- 20. Does S sometimes surprise his acquaintances by unexpected actions?
- 21. Would S buy an article at the cheaper price if he noticed that the clerk has asked less than the price tag indicates, apparently having misread it?
- 22. Does S act deliberately rather than impulsively?
- 23. Does S often keep his views to himself because they do not seem important enough to tell others?
- 24. Does S move about a good deal at a social gathering?
- 25. Can S make a speech or public performance without stage fright?
- 26. Is S likely to stay on the veranda by preference when some of the others go for tennis or a swim?
- 27. Does S have phobias, i.e., an unwarranted and disturbing hatred or fear of any object or group of objects or situations?
- 28. Is S good at "breaking the ice" in a social gathering?
- 29. Does S have the same religion, politics, or philosophy as his parents?
- 30. Is S constantly careful to protect his health?

- 31. Is S so sure of himself that it sometimes annoys others?
- 32. Does S quickly recover his composure after an accident or similar disturbing incident?
- 33. Is S less attentive than most individuals to things going on around him?
- 34. Is S rather indifferent to maintaining the dignity and privileges of his job or place in life?
- 35. Can S work in a room with many others talking and work efficiently without strain?
- 36. Does S maintain uniformly, courteous behavior to other members of his family?
- 37. Is S the kind of a person one might call a "self starter"?
- 38. Can S enjoy a rest when there are distracting noises and movements about?
- 39. Does S love to travel and when on a trip does he seek new experiences characteristic of the country?
- 40. Does S chew pencils or bite fingernails?
- 41. Does S sometimes say things that are dominating so that peoples' feelings are sometimes hurt?
- 42. Does S have few interests or activities of his own choosing?
- 43. Does S "stick-to-it" at the cost of much inconvenience rather than give up?
- 44. Does S have some thought pressing itself on his attention too much of the time to his annoyance?
- 45. Does S eat slowly (making due allowance for age)?
- 46. Is S as much influenced in his behavior by consideration of general welfare as by considerations of his own advantage?
- 47. Does S sleep well?
- 48. Does S take responsibility with reluctance, because he is doubtful of his fitness for it?
- 49. Does S think that modern prisons coddle the prisoner too much so as to interfere with needed punishment?
- 50. Would you consider S a "go-getter"?
- 51. Is S so sympathetic with those he sees in pain as to want to do something about it?
- 52. Is S likely to give way to the wishes of others rather than to seek to have his own way?
- 53. Would S feel sympathetic with conscientious objectors in time of war, where it is a war of invading other countries by one's own country?
- 54. Does S try to convert people to his views in several fields in which he is not an expert?
- 55. Does S prefer to take a passive role in the clubs to which he belongs?
- 56. Does S become disturbed by harmless rattles, crickets or the wind?
- 57. Does S make a practice of offering help to motorists who need help, but do not ask for it?
- 58. Does S use all reasonable precautions to prevent accidents?
- 59. Does S accept defeat easily without any evidence of his disappointed feeling?
- 60. Would S probably resort to corporal punishment in the case of deliberate disobedience by his own child at age ten?

- 61. Does S get into scrapes occasionally?
- 62. Does S have a habit of blinking eyes or pulling at ears?
- 63. Does S fail to finish what he sets out to do, often enough to be a bother to him?
- 64. Does S incline to ride rather than walk when the distance is intermediate?
- 65. Do S's "teeth get on edge" when hearing some noises?
- 66. Does S buy on credit to excess?
- 67. Is S emphatic in voice and manner?
- 68. Can S get along with children of various ages without becoming irritated by them?
- 69. Has S made more than one loan out of kindheartedness in which he was "worked" and never repaid?
- 70. Can S relax easily when sitting or lying down?
- 71. Does S favor zoning the city to control residence areas for negroes or orientals?
- 72. Does S become so scared or apprehensive at times so as to feel hot, or shivering or have skin get goose-pimples, (goose-skin, goose-flesh)?
- 73. Is S impatient with a child's strong desire for a worthless object?
- 74. Does S feel strongly convinced of the correctness of his views when in a controversy, excluding those in which he is expert?
- 75. Does S worry more than the circumstances warrant?
- 76. Does S sometimes get quite "keyed-up" (exclusive of drinking)?
- 77. Does S make plans well in advance of the event and carry them out?
- 78. Does S often get so wakeful as to be disinclined to go to bed at the usual time?
- 79. Does S tend to put off doing things past the time that would be best?
- 80. Does S take necessary risks of misfortune without undue worry?
- 81. In traveling does S watch out to help the aged, infirm, or those with children rather than leave such acts to the officials?
- 82. Does S talk less than his share when with others?
- 83. Does S break out in more explosive action or words than would be expected from the cause?
- 84. Does S stand by and avoid protecting an aninal from needless suffering?
- 85. Does S think less well of his ability than the facts warrant?
- 86. Is S opposed to the parole system for criminals?
- 87. Does S try to "get things going" in the community to which he belongs?
- 88. Is S almost always truthful to others?
- 89. Is S lively enough so someone might refer to him as "always-on-the-go"?
- 90. In an automobile accident in which S is involved does he really try to see that any damage he did is made good?

- 91. Is S inclined to have a few select friends rather than a large circle of friends and speaking acquaintances?
- 92. Is it very hard for S to take blame, so that he seeks to avoid it?
- 93. In social contacts is S thought of as warm-hearted?
- 94. Do his failures come hard to S?
- 95. Is S usually able to steady a difficult situation where "others lose their heads"?
- 96. Does S put into his conversation quite a few "knocks" about others?
- 97. Is singing or whistling often started by S out of the joys of life?
- 98. Does S express his emotions readily?
- 99. Is S independent in making a judgment uninfluenced by whether he likes or dislikes the leading supporter of the proposal in question?
- 100. Is S really fond of only a few people?
- 101. Does S make efforts to get others to laugh and smile?
- 102. Is S much interested in the affairs of other people?
- 103. Does S refrain from complaining, when the other is late to an appointment?
- 104. Is S sometimes thought of as a "wet blanket"?
- 105. Is S considered cheery by some people?
- 106. Does S think that someone is definitely unfriendly to him and works against him?
- 107. Does S nearly always find it easy to take an interest in other peoples' interests in conversation?
- 108. When S does criticize, is it always tactful and really meant to be helpful?
- 109. Does S give judgments only after a weighing of the pros and cons?
- 110. Is S relatively unaffected in listening to emotional music?
- 111. Does S think less well of rivals than they deserve?
- 112. Does S express his satisfaction when he sees beautiful things?
- 113. Does S give very little time in his conversation to the criticism of people and things?
- 114. Does S sometimes think people are looking at him or talking about him when they are really not doing so?
- 115. Does S pay his debts and keep his promises when it is possible?
- 116. Does S get over bad news quickly?
- 117. Does S take criticism easily without resentment?
- 118. Do various satisfactions keep S's life so full that life seems very much worth living?
- 119. Does S find it easy to be impartial when called on to judge?
- 120. Does S "put his foot in it" often (make a tactless blunder)?

- 121. Is S hearty in greeting people?
- 122. Is S almost free from being suspicious of the actions of others?
- 123. Does S sometimes get the experience in hearing speakers of thinking that the speaker is referring to S?
- 124. Does S have a tendency to do some things beyond what good judgment would indicate?
- 125. Does S tend to exaggerate his grievances?
- 126. Does S adapt readily to new difficult conditions and situations?
- 127. Do death, sickness, pain, and sorrow enter largely into S's dreams?
- 128. Does S live an easy-going life with only few enthusiasms to express?
- 129. Does S think as well of those with whom he has a disagreement, as before?
- 130. Does S often ponder on the misfortunes of his past?
- 131. Does S show a uniform rather than a varied expression in talking?
- 132. Is S hard to please?
- 133. Does S carry out assignments promptly and systematically?
- 134. Is S likely to be jealous?
- 135. Is S rather optimistic about opportunities for young people?
- 136. Is S "touchy" on several things about himself?
- 137. Is S bothered at times with the idea that nobody cares for him?
- 138. Does S look ahead and fail to smile and show interest when passing a beautiful child?
- 139. Is S well pleased with life and so never considered committing suicide?
- 140. Is S prejudiced in favor of his own club, college, state, etc.?
- 141. Does S smile much?
- 142. Does S find that a minor failure or poor showing of his can be quickly forgotten?
- 143. Is S unsuccessful in acting, impersonating or relating incidents effectively?
- 144. Is S logical and scientific in his thinking?
- 145. Does S comment on many shortcomings in the shows he sees and the books he reads?
- 146. Does S find that the memories of illness or pain pass out of mind fairly soon?
- 147. Does S feel abused not being able to do something, instead of adapting to it by some substitute activity?
- 148. Does S prefer to be with adults nearly all the time rather than with children part of the time?
- 149. Does S only seldom express any grievances?
- 150. Does S have his opinions influenced by looking at things from the standpoint of his experience, occupation, or training?
- 151. Do companions like to be with S?
- 152. Does S often have the blues?
- 153. After seeing a tragic motion picture or drama, does S quickly return to normal, rather than continue being disturbed for a while?

- 154. Are personal interests unable to sway S from sound decisions?
- 155. Does S when on a picnic find himself sometimes unable to share the good spirits of the others?
- 156. Does S think well of most people, as to only rarely speak slightingly of them?
- 157. Does S show a cordial attitude only to close friends if at all?
- 158. Does S think someone does not like him and speaks critically about S to others?
- 159. Does S smile or laugh a good deal?
- 160. Can S see things as others see them, when he wishes to?
- 161. Does S, when he has a grievance straightened out, continue disgruntled for a while?
- 162. In voting does S study the personalities and issues, sometimes voting for a candidate of the other party, rather than regularly voting the same party ticket straight?
- 163. Does S refrain from giving a kiss, hug, pat on the back or otherwise manifesting pleasure in meeting friends, except as needed for politeness, after an absence of a fortnight or so?
- 164. When S loses something, is he almost free from the tendency to think that some one else stole or mislaid it?
- 165. Does S give too high an importance to his own interests and fields of knowledge in comparison with others?
- 166. Does S find it hard to get started on a task that needs to be done?
- 167. Does S find it annoying to have any criticism made of himself even though justified and from which he could profit?
- 168. Can S "stand-up" under adversity well?
- 169. Does S often feel sad because of his inferiority in some repects?
- 170. Does S show a friendly attitude in his voice or expression?
- 171. Does S prefer not to pass a cemetery, so as not to be reminded of death?
- 172. Does S spend only very little time or no time grumbling about the condition of his work?
- 173. Does S succeed in preventing his emotions swaying his judgment much?
- 174. Is S appealed to strongly by young lovers who are hampered by opposition?
- 175. In disagreements with associates does S find it hard to understand how the other can possibly differ from him, so very one sided does the matter seem?
- 176. Does S find that grief over war victims and refugees comes to mind often?
- 177. Does S spend too freely in view of his income?
- 178. Does S think he has many warm friends?
- 179. Does S estimate his friends too favorably, in comparison with others whom he judges more severely?
- 180. Is S almost free from being disturbed by either his immaturity or aging?
- 181. Does S have spells of liveliness (lasting at least several days) rather than staying at about the same level?
- 182. Does S have spells of being sad and depressed (lasting at least several days) rather than staying at about the same level?

Now look back over your answer sheet to make sure you have an answer for every question. If you do not know, make the best guess you can.

Be sure to look to make sure you filled in the blanks at top of answer sheet showing your name, etc.

APPENDIX D

DEFINING PROBABILITY

For calculating the probability that the association between the qualities or the instance of the degree of qualities of two or more factors may or may not be due to chance alone, the method of x^2 or the sum of relative difference is used. In doing this, it is necessary to compare the actual frequencies of the degrees of the factors with the distribution expected to be found if the factors were independent and unrelated.

After the observed values are inserted in a table, the first step is to find the independence value for each cell. In the following example, these values (exp.) represent the number of each of the two groups, which one should expect to find in the absence of any actual association between two groups of homemakers, Group I with home economics education in high school. Group II without home economics education in high school.

For example the actual number of homemakers in Group I in the sample thirty-one was eighteen. If there were no association between interests women with home economics education and without home economics education, one should expect to find $\frac{49 \times 100}{200}$ or 24 subjects, women with home economics training. The "independence" values have been calculated for each cell, the next step is to find the difference (d) between the (obs) actual value and independence value (exp.). Each difference (d)

is then squared (d^2) and the square is divided by each particular independent value (d^2 ÷ exp.). These quotients are called the relative difference. The sum of the relative difference is called x^2 . The probability that x^2 in the sample table could be due to chance alone is less than .001. This means that there are .001 chances in one hundred that the association could be due to chance alone. For x^2 to be significant, the probability must be less than .05.

ABSTRACT

This investigation is a study of adjustment and home management practices of two groups of homemakers, those with and without home economics education in high school. The two groups were compared for (1) home management practices, (2) adjustment of homemaker and husband, and (3) homemaking adequacy as reflected in certain practices.

Subjects used were 31 young married homemakers living in Richmond, Virginia, all graduates of Richmond High Schools in 1949-50, none of whom attended college. Subjects were divided into two groups; Group I, 18 homemakers who studied home economics in high school; Group II, includes 13 homemakers without home economics training.

The data, collected during 1958 through the interview method, include (1) interests, problems and attitudes of homemakers, (2) personality inventories, and (3) husband's opinion of wife as a homemaker.

The two groups were similar in age, number of children, leisure time, social activities and home relations. Household activities and husbands opinion of his wife as a homemaker of subjects in Group I were rated superior to those in Group II.

Group I subjects felt that a wider range of subject matter in their high school home economics courses would have been beneficial.

Group I subjects considered 13 of 42 problem items used to be problems significantly more often than subjects in Group II. In 10 of 25 possible interest items listed, Group I homemakers expressed a significantly high interest.

Significantly better scores were received by Group I subjects than by Group II subjects on the Johnson Temperament Analysis for four traits, and by Group II on two traits. Husbands temperament scores were similar to their wives.
