Abstract	xxii

## CHAPTER 1 - INTRODUCTION

1.1. Contextual environment	1
1.2. Alternative vision for simulation software	3
1.2.1. The DotNetSim project	5
1.3. Thesis organisation	6

## CHAPTER 2 - SIMULATION AND MODELLING

Chapter overview	13
2.1. Simulation	15
2.1.1. Simulation of a complex system	15
2.1.2. Simulation development stages	19
2.1.3. Discrete Event Simulation	21
2.2. Discrete Event modelling	22
2.2.1. The logical structure of a DE model	22
2.2.2. Time Flow mechanisms	24
2.2.3. The two-component functional structure	26
2.3. Simulation worldviews	27
2.3.1. The event-based worldview	28

---

2.3.2. The activity-scanning worldview	29
2.3.3. The process-based worldview	30
2.3.4. The three-phase worldview	31
2.4. The chapter in context	33
 <b>CHAPTER 3 - COMPUTING AND SIMULATION</b>	
Chapter overview	35
3.1. Programming paradigms	36
3.1.1. Structured programming	37
3.1.2. Functional and logic programming	38
3.1.3. Object-oriented programming	39
3.1.3.1. Classes, abstraction and encapsulation	39
3.1.3.2. Classes, inheritance and polymorphism	40
3.1.4. Component-Oriented programming	41
3.1.4.1. Granularity and abstraction	42
3.1.5. Layered-oriented programming	42
3.2. Class, object and component composition	43
3.2.1. Class composition	44
3.2.2. Object composition	45
3.2.3. Component composition	45
3.2.3.1. Interfaces	46
3.2.3.2. Cohesion and coupling	46
3.2.3.3. Location	47
3.2.3.4. Binding time	48
3.2.4. Reusability	48
3.2.5. Integration and interoperability	49

---

3.3.	Simulation software follows the technological advances	50
3.3.1.	A brief historical review of simulation software	52
3.3.1.1.	From manual simulation towards portable simulation software	53
3.3.1.2.	Towards simulation programming languages	54
3.3.1.3.	Towards packages	56
3.3.1.4.	Towards visual interactive modelling systems	57
3.3.2.	The current development strategy of simulation software	58
3.3.3.	Future development strategy of simulation software	60
3.4.	The Chapter in context	63

## **CHAPTER 4 - SIMULATION SOFTWARE: CURRENT EXPERIENCES AND THE DOTNETSIM PROJECT**

	Chapter overview	64
4.1.	Current experiences in simulation software:	66
4.1.1.	Process Simulator™	67
4.1.2.	Micro Saint Sharp™	69
4.1.3.	HighMast™	71
4.2.	An alternative vision for simulation software	73
4.3.	The idea of DotNetSim	79
4.4.	The DotNetSim computing technological background	81
4.4.1.	The Microsoft Automation	81
4.4.2.	The Microsoft .NET Framework	83
4.4.3.	.NET Framework's Architectural components	85
4.4.4.	Multiplatform and multiple lingual integration	88
4.4.5.	Integration of Microsoft Office with the .NET Framework	90

---

4.5.	The DotNetSim prototype	91
4.5.1.	DotNetSim and other developments	93
4.6.	The Chapter in context	96

## **CHAPTER 5 - THE DOTNETSIM MODELLING ENVIRONMENT: STENCIL COMPONENT**

Chapter overview	97	
5.1.	Objectives of the DotNetSim modelling environment	99
5.2.	The DotNetSim conceptual framework: Event Graphs	101
5.2.1.	Basic concepts	102
5.2.2.	Basic and extended modelling notation	103
5.3.	DotNetSim modelling environment: The stencil component	107
5.3.1.	The stencil menu	107
5.3.2.	Masters and shapes	109
5.3.3.	Custom properties and methods of the masters	113
5.4.	Comments on the implementation of the stencil component	116
5.4.1.	The reusability of the Event Graph stencil	117
5.5	The chapter in context	118

## **CHAPTER 6 - THE DOTNETSIM MODELLING ENVIRONMENT: THE MODELLING COMPONENT**

Chapter overview	120	
6.1.	Objectives of the DotNetSim modelling component	121
6.2.	DotNetSim modelling environment: the modelling component	123
6.2.1.	Customising Visio™	125
6.2.2.	Drawing the diagram	126
6.2.3.	Reading the diagram	128

---

6.2.4. Describing the model	130
6.2.5. Reviewing the model	133
6.2.6. Reporting the model	135
6.2.7. General operations on the model	137
6.2.8. Simulating the model	137
6.2.9. Utilities	138
6.2.10. Help	138
6.3. Comments on the implementation of the modelling component	138
6.3.1. Packages as objects of other packages	139
6.3.2. Applications object models	141
6.3.3. Visual Basic for Applications	142
6.4. The chapter in context	143

## **CHAPTER 7 - THE DOTNETSIM SIMULATION ENGINE**

Chapter Overview	144
7.1. Objectives of the DotNetSim simulation engine	145
7.2. DotNetSim: the simulation engine component	148
7.2.1. Up-stream integration: Reading data from Visio™	150
7.2.2. Event-based simulation: Top-down and algorithm	153
7.2.3. Down-stream integration: Writing data onto Excel™	156
7.3. Comments on the implementation of the simulation engine component	157
7.3.1. Crossing lingual barriers within the Simulation engine	158
7.3.2. Crossing packages barriers between Microsoft .NET and Microsoft Office	161
7.3.2.1. Solving shortages of computer resources	163
7.3.3. Comments on further issues	166

---

7.4	The chapter in context	169
-----	------------------------	-----

## **CHAPTER 8 - THE DOTNETSIM OUTPUT ANALYSIS**

Chapter Overview	170
8.1. Objectives of the DotNetSim output analysis	172
8.2. The DotNetSim: Output analysis component	173
8.2.1. Customising Excel <sup>TM</sup>	174
8.2.2. Analysing the system's changes of state	177
8.2.2.1. Tracing state changes	177
8.2.2.2. Plotting system's states	178
8.2.2.3. Statistical add-ins	179
8.2.3. Reporting the simulation analysis	180
8.3. Comments on the implementation of the DotNetSim output analysis	181
8.4 The chapter in context	183

## **CHAPTER 9 - USING DOTNETSIM**

Chapter overview	185
9.1. Use cases	185
9.2. Creating the event-graph stencil	187
9.3. Running and customising the DotNetSim modelling component	188
9.4. Modelling a DES system in DotNetSim	188
9.4.1. Drawing, listing and redrawing Event Graphs	189
9.4.1.1. Drawing the single server Event Graph	191
9.4.1.2. Drawing other Event Graphs	192
9.4.2. Describing the models	194
9.4.2.1. Describing the single server	194

---

9.4.3. Reviewing the model	196
9.4.4. Reporting the model	197
9.4.4.1. Reporting the Event Graph	197
9.4.4.2. Summing up the model	198
9.4.5. General operations on the model	198
9.5. Simulating DE models	200
9.6. Analysing simulation results	201
9.6.1. Simulation output analysis menu	202
9.6.2. Analysing the system's state transition	203
9.6.3. Further analytical and graphical analysis	205
9.6.4. Reporting the simulation analysis	206
9.7 The chapter in context	207
 <b>CHAPTER 10 - CONCLUSIONS AND FURTHER RESEARCH</b>	
Chapter overview	208
10.1. Summary of the thesis	209
10.1.1. Major arguments in the thesis	210
10.1.2. Research that has led to the thesis	212
10.1.3. Contribution to the development of DES software	215
10.2. Lessons learned	217
10.2.1. Strengths and weaknesses revealed by the DotNetSim prototype	218
10.2.2. Opportunities and threats towards a commercial version	219
10.3. Future research	220
10.3.1. Libraries of components for DES software	221
10.3.2. Web services	222
10.4. Final conclusions	223

**EPILOGUE**

E.1.	Customisation of DES simulation software	224
E.2.	A stepping-stone to the ideal on-demand scenario	225
E.3.	Assessing the success of this research so far	226
E.4.	Further prototyping towards on-demand simulation software	233
E.5.	Broadening the scope of this research	234
