

Figure 2. 5' deletion analysis of *gp2* promoter-luciferase gene fusion. The clone numbers and their distance from the translational start AUG codon are shown to the left of the figure. The position of the “TAG” and “C” boxes are indicated by the open and cross-hatched boxes, respectively. Luciferase activity is expressed as Luciferase units x 10⁵/mg protein. The Luciferase activity corresponding to the -461 to -282bp fragment, added to construct 2A is shown at the bottom of the figure. The values represent the mean and standard deviation from several independent experiments.
