

LIST of FIGURES

<u>Figure</u>	<u>Page</u>
G.1 ELCO Grade 8 Standoff Screws	4
G.2 Self-tapping Screws with Standoff Sleeves (Strocchia et al. 1990)	5
G.3 Vulcraft Deck Profile Used by Strocchia et al. (1990)	5
G.4 Standoff Screws Investigated by Hankins et al (1994)	7
G.5 Typical Push-out Specimen Used by Hankins et al. (1994)	11
G.6 Typical Screw Rotation (Hankins et al. 1994)	12
G.7 Longitudinal Shear Path (Lloyd and Wright 1990)	13
G.8 Wedged Shear Cone (Lloyd and Wright 1990)	14
G.9 Standoff Screws Investigated by Alander et al. (1998)	15
G.10 Vulcraft Deck Profiles Used by Alander et al. (1998)	16
G.11 Comparison of Strength Ratios for Standoff Screw Calculation Models	24
G.12 Breakout Body in 45-Degree Cone Method (CEB 1991, Muratli et al. 2001)	32
G.13 Tensile Breakout Cone in 45-Degree Cone Method (CEB 1991, Shirvani et al. 2001)	33
G.14 Idealized Breakout Model for a Single Shear Anchor by CC Method (CEB 1991, Muratli et al. 2001)	34
G.15 Tensile Concrete Breakout Body by CC Method (CEB 1991, Shirvani et al. 2001)	36
G.16 Model of a Force-Based Composite Beam Element (Salari et al. 1998)	41
G.17 Model of a Displacement-Based Composite Beam Element (Salari et al. 1998)	42
G.18 Definition of “Ductile” for Welded Studs and Other Connectors (Johnson 1994)	46
G.19 Design Methods for Partial Shear Connection (Johnson et al. 1993)	47
G.20 Interaction Between Moment and Degree of Shear Connection (Mullett 1998)	48
G.21 Fracture of Shear Connectors in Composite Beams (Oehlers and Bradford 1999)	50
G.22 Representation of Safety Index, β , per Galambos and Ravindra (1973)	54
H.1 Typical ELCO Grade 8 Standoff Screw	66
H.2 Push-Out Test Configuration (Alander et al. 1998a)	68
H.3 Full-Scale Test Configuration (Mujagic et al. 2000b)	68
H.4 Concrete Stress-Strain Model	70
H.5 Fracture Energy Cracking Response of Concrete	71
H.6 Structural Steel Stress-Strain Curve	71
H.7 Standoff Screw Stress-Strain Curve	72
H.8a Finite Element Models: Mesh Structure	73
H.8b Finite Element Models: Loading and Boundary Conditions	73
H.9 FEM Modeling Parameters and Screw Embedment	74
H.10 Comparison of Experimental and Numerical Model of Screw Shear Failure	75
H.11 Comparison of Experimental and Numerical Model of Brittle Concrete Failure	76
H.12 Comparison of Experimental and Numerical Model of Solid Slab Failure	76
H.13 Connector Rotation in Screw Shear Failures	78
H.14 Effect of Top Chord on Screw Shear Failure	79
H.15 Failure Plane in Concrete Rib Failures	80
H.16 Effect of $f'c$ on Concrete Rib Failure Based Strength	81

H.17	Effect of A_e on Concrete Rib Failure	81
H.18	Influence of N on Concrete Rib Failure	82
H.19	Post-Failure Deformations in Screw Pullout	84
H.20	Effect of $F_{y,tc}$ on Screw Pullout Based Strength	84
H.21	Effect of D_e on Screw Pullout Based Strength	84
H.22	Distribution of (Test/Prediction) Ratios for Standoff Screw Model	86
H.23	Test CSJ-12 Slip at Maximum Load	87
H.24	Test CSJ-13 Slip at Maximum Load	87
H.25	Configuration of the Example Composite Joist	96
I.1	Effect of Degree of Shear Connection on Moment Strength	110
I.2	AISC Flexural Model	111
I.3	Slab and Stud Geometric Parameters	113
I.4	Variation of ϕ with the Degree of Shear Connection (Solid Slabs)	138
I.5	Variation of ϕ with the Degree of Shear Connection (R-Method)	139
I.6	Variation of ϕ with the Degree of Shear Connection (RS-Method)	139
J.1	AISC Flexural Model of the Composite Beam	159
J.2	Stud Spacing Parameters in EC4	161
J.3	Eurocode Flexural Model of the Composite Beam	162
J.4	Effect of shear on moment strength per EC4-1994-1.1	165
