DEDICATION

This dissertation is dedicated to my family. My children – Katie, Max, and Lucy and my wife Vicky. There were many, many nights and weekends of classes, missed ballgames and programs, and looking at the back of a dad who was in front of a computer more often than not. They provided me with unending support and encouragement during the entire four years of this process.

ACKNOWLEDGEMENTS

This dissertation would not have been possible without the help of Dr. Travis Twiford, my committee chair. His patience, feedback, coupled with more patience and more feedback was more than valuable. In addition, my other committee members: Dr. Byers, Dr. Kelly, and Dr. Rayfield all gave me positive support, encouragement, and feedback during the entire dissertation process.

The members of the Tidewater 2002 Cohort were also instrumental in the completion of this process. The benefit of a doctoral cohort is that you develop lasting professional friendships with people who are pursuing a similar goal over the course of four years. I am grateful for the support of the cohort.
