

*To my loving parents,
and my dear wife Shelly for their encouragement and support.*

Acknowledgments

I have been very fortunate for having had Dr. Ira Jacobs as my research advisor. I thank him for giving me a chance to work under his tutelage in the exciting field of optical communication systems. I thank him for his guidance during my graduate studies and his strong belief in me during this period. My association with Dr. Jacobs has helped me grow not only as a researcher but also as an individual.

I would like to express my gratitude to Dr. Ken Shaw for advising me in the early stages of my dissertation work and also for taking a genuine interest in my research.

I also would like to thank the staff at Cranwell International Center, especially Kim Beisecker, Belinda Pauley and Marilyn Woolard for their support and for making my life at Virginia Tech more enjoyable. The leadership opportunities they provided me helped me become a better individual.

I thank my co-workers at Capital One for their understanding and encouragement in the last 2 years, especially my managers Catherine Wang, Bill Panak and Chris Hamson.

Last but not least, I want to thank from the bottom of my heart the people dearest to me without whose support I would have never accomplished this goal. My parents have always waited patiently giving me support and encouragement in my most difficult times. Their love, courage and prayers have been my greatest strength all these years. My dear wife Shelly who has been a source of inspiration for the last 3 years. Her belief in me from the moment we met has always been a driving force behind my success.

Table of Contents

Chapter 1 - Introduction and Definition of Problem

| | |
|---|-----------|
| 1.1. The Shannon Bound | 3 |
| 1.2. Receiver Models | 4 |
| 1.2.1. Coherent Receivers | 4 |
| 1.2.2. Optical preamplifier direct detection (incoherent) receivers | 5 |
| 1.2.3. PIN Direct Detection Receiver | 6 |
| 1.3. Definition of SNR | 7 |
| 1.4. Parallel Channels | 7 |
| 1.5. Literature on the Capacity of Incoherent Channels | 8 |
| 1.6. Direct Detection Bound obtained by Shtaif and Mecozzi | 10 |
| 1.7. Methodology for following chapters | 14 |

Chapter 2 - Output Distributions and Spectral Efficiencies for Coherent Receivers (1 DOF case)

| | |
|---|-----------|
| 2.1. Output PDF f_y with Rayleigh Input and Gaussian Noise | 18 |
| 2.2. Calculation of Mutual Information Expression with f_y as the Output Distribution and Rayleigh Input | 21 |
| 2.3. Output PDF f_y with Half-Gaussian Input and Gaussian Noise | 23 |
| 2.4. Calculation of Mutual Information Expression with f_y as the Output Distribution and Half-Gaussian Input | 25 |
| 2.5. Output PDF f_y with Exponential Input and Gaussian Noise | 26 |
| 2.6. Calculation of Mutual Information Expression with f_y as the Output Distribution and Exponential Input | 27 |
| 2.7. Comparison of Spectral Efficiencies for Rayleigh, Half-Gaussian and Exponential Inputs for $y=x+n$ | 28 |
| 2.8. Calculation of $I(x;z)$ when $z_I= y_I$ by using a Markov Chain | 31 |

| | |
|---|-----------|
| 2.8.1. Half-Gaussian Input | 34 |
| 2.8.2. Rayleigh Input | 36 |
| 2.8.3. Gaussian Input | 37 |
| 2.8.4. Exponential Input | 39 |
| 2.8.5. Summary of Results for $I(x_I; z_I)$ | 42 |
| 2.9. Channel capacity results for low SNR values for a half-Gaussian input | 56 |

Chapter 3 - Incoherent Detection with 2 and 4 Degrees of Freedom

| | |
|--|-----------|
| 3.1. Existing Bounds for 2 Degrees of Freedom | 49 |
| 3.2. Numerical calculation of mutual information for 2 degrees of freedom with a half-Gaussian input | 51 |
| 3.2.1. Calculation of $H(Z^2)$ for a half-Gaussian input | 52 |
| 3.2.2. Calculation of $H(Z^2 X)$ for a half-Gaussian input | 54 |
| 3.3. Finding the transition probability for two polarizations or 4 degrees of freedom | 55 |
| 3.4. Numerical calculation of channel capacity for 4 degrees of freedom with a half-Gaussian input | 57 |
| 3.5. High m approximation | 59 |
| 3.5.1. Calculation of $H(Z^2)$ | 59 |
| 3.5.2. Calculation of $H(Z^2 X=x)$ | 60 |
| 3.5.3. Channel capacity approximation | 60 |
| 3.6. Summary of results obtained with a half-Gaussian input | 61 |
| 3.7. Analytical proof that the transition probability for 2 and 4 DOFs is the same for high SNR | 65 |
| 3.8. Numerical calculation of mutual information for 2 degrees of freedom with a modified half-Gaussian input | 67 |
| 3.8.1. Calculation of $H(Z^2)$ for a modified half-Gaussian input | 67 |
| 3.8.2. Calculation of $H(Z^2 X)$ for a modified half-Gaussian input | 69 |
| 3.8.3. Power efficiency for a modified half-Gaussian input | 72 |
| 3.9. Numerical calculation of mutual information for 4 degrees of freedom with a modified half-Gaussian input | 73 |

| | |
|--|-----------|
| 3.10. Proof that modified half-Gaussian (MHG) distribution gives mutual information that is linearly dependent on SNR for small SNR | 75 |
| Chapter 4 – Conclusions and Open Questions | 78 |
| References | 81 |

List of Figures

| | |
|--|----|
| 1.1. Spectral efficiency – Incoherent detection with single polarization (Shtaif and Mecozzi) | 13 |
| 1.2. Spectral efficiency – Incoherent detection with single polarization (Comparison of Shtaif and Jacobs bounds) | 13 |
| 2.1. Output distribution when the input distribution is Rayleigh and the SNR=1 | 19 |
| 2.2. Plot of $f_y(y)$ when $f_x(x)$ is Rayleigh for various values of SNR | 20 |
| 2.3. Plot of $f_y(y)$ when $f_x(x)$ is half-Gaussian for various values of SNR | 24 |
| 2.4. Plot of $f_y(y)$ when $f_x(x)$ is exponential for various values of SNR | 26 |
| 2.5. Comparison of spectral efficiencies for various distributions | 29 |
| 2.6. Comparison of spectral efficiencies for various distributions with high SNR bound | 30 |
| 2.7. Contributions of each part of $I(x_I; z_I)$ for half-Gaussian input | 35 |
| 2.8. Contributions of each part of $I(x_I; z_I)$ for Rayleigh input | 37 |
| 2.9. Comparison of $I(X; Z)$ with Gaussian input and $I(X; Y)$ with half-Gaussian input | 38 |
| 2.10. Contributions of each part of $I(x_I; z_I)$ for exponential input | 41 |
| 2.11. Comparison of $I(x_I; z_I)$ obtained via the Markov chain method for various distributions | 42 |
| 2.12. Comparison of $I(x_I; y_I)$ and $I(x_I; z_I)$ with Gaussian input distribution | 43 |
| 2.13. Comparison of $I(x_I; y_I)$ and $I(x_I; z_I)$ with half-Gaussian input distribution | 43 |
| 2.14. Comparison of $I(x_I; y_I)$ and $I(x_I; z_I)$ with Rayleigh input distribution | 44 |
| 2.15. Comparison of $I(x_I; y_I)$ and $I(x_I; z_I)$ with exponential input distribution | 44 |
| 2.16. Spectral efficiency for 1 DOF at low SNR values for a half-Gaussian input | 46 |
| 2.17. Comparison of spectral efficiency for 1 DOF coherent channel and the incoherent channel | 47 |

| | |
|---|----|
| 3.1. Entropy of Z^2 for a half-Gaussian input | 53 |
| 3.2. Mutual information calculated numerically for a half-Gaussian input for various values of m – linear scale | 58 |
| 3.3. Mutual information calculated numerically for a half-Gaussian input for various values of m – logarithmic scale | 58 |
| 3.4. High m approximation – for various values of m | 60 |
| 3.5. Comparison of high m approximation with numerical results for $m=2$ | 61 |
| 3.6. Linear plot of various results obtained in chapter 3 for different values of m | 62 |
| 3.7. Logarithmic plot showing lower SNR levels more clearly for various m | 62 |
| 3.8. Calculation of constant to approximate mutual information with a simple expression for various values of m | 64 |
| 3.9. Mutual information for modified half-Gaussian input with $m=2$ compared to a half-Gaussian input and the Shannon bound | 70 |
| 3.10. Mutual information for increasing ε - SNR=-10dB | 71 |
| 3.11. Mutual information for increasing ε - SNR=0dB | 71 |
| 3.12. Minimum number of photons per bit for 2 DOF using a modified half-Gaussian distribution with $\varepsilon=0.95$ | 72 |
| 3.13. Channel Capacity for modified half-Gaussian input with $m=2$ compared to a half-Gaussian input and the Shannon bound using a linear approximation | 76 |
| 3.14. Mutual information for modified half-Gaussian input with $m=4$ compared to a half-Gaussian input and the Shannon bound using the extrapolation method | 76 |
| 3.15. Mutual information for modified half-Gaussian input with $m=2$ and $m=4$ compared to results obtained with the half-Gaussian input | 77 |
