

ACKNOWLEDGMENTS

I take this opportunity with joy and fulfillment to thank the people that have contributed to the successful completion of my period of studentship at Virginia Tech over the last few years. First, my research advisor, Prof. Hervé Marand, who introduced me to the field of Polymer Science and kept pushing me to always take one step further. He has been a constant source of support and encouragement, and a great friend throughout my career here. I owe the successful completion of my degree to him.

My sincere thanks are also due to Prof. Thomas Ward and Prof. Garth Wilkes, who taught me a number of concepts in Polymer Science through their classes, and have kindly served on Committee. I also express my gratitude to Prof. Harry Gibson and Prof. James Glanville for their comments and feedback on my research and for serving on my Committee.

My special thanks are due to Prof. Allan Shultz with whom I have spent a number of hours discussing my research and proposal ideas among other topics. He has always made himself available on all occasions, whether it be a practice talk or a defense substitution.

I would also like to thank Mr. Steve McCartney for his assistance with the AFM and Mr. Tom Glass for the NMR experiments. My thanks are also due to Dr. Eva Marand for the FTIR equipment. I also acknowledge the financial support and samples provided by the Dow Chemical Company, and funding by the National Science Foundation.

My thanks are also due to my research group members, both old and new - Cham, Chad, Darrell, Lisa, Dawn, Jiang, Julie, Vesselin, Jiannong, Azar, Seungman, Sean, Robin and Ley - for their friendship and for creating a great work ambience. I also thank the past and present members of Prof. Ward's research group - Dan, Kermit, Mark, Ojin, Dave, Amy, Rob, Jennifer, Jianli, Sandra and Emmett - for their friendship, for the short course food and Farmhouse banquets, for the "trips" downtown, for the numerous cookouts and above all, for making the department a fun place to work in. Special thanks

are due to Ms. Esther Brann, Ms. Millie Ryan, Ms. Joyce Moser and Ms. Laurie Good for their assistance and efficiency in getting things done.

My final thanks are due to my family. My brothers - Sam, Ram, Nathan and Sankar - for their advice and support; and a special one to my sister, Sudha, who was by my side throughout my final year here. I thank her for her patience, support and understanding that kept me going many a times. My special thanks are also due to Kermit, without whose kind words of support and encouragement, this would not have been possible. My biggest and important gratitude goes to my parents, Janaki and P. R. Subramaniam, for their constant inspiration, support and encouragement. I owe the success of my career to their unselfish sacrifices and I dedicate this dissertation to them.
