

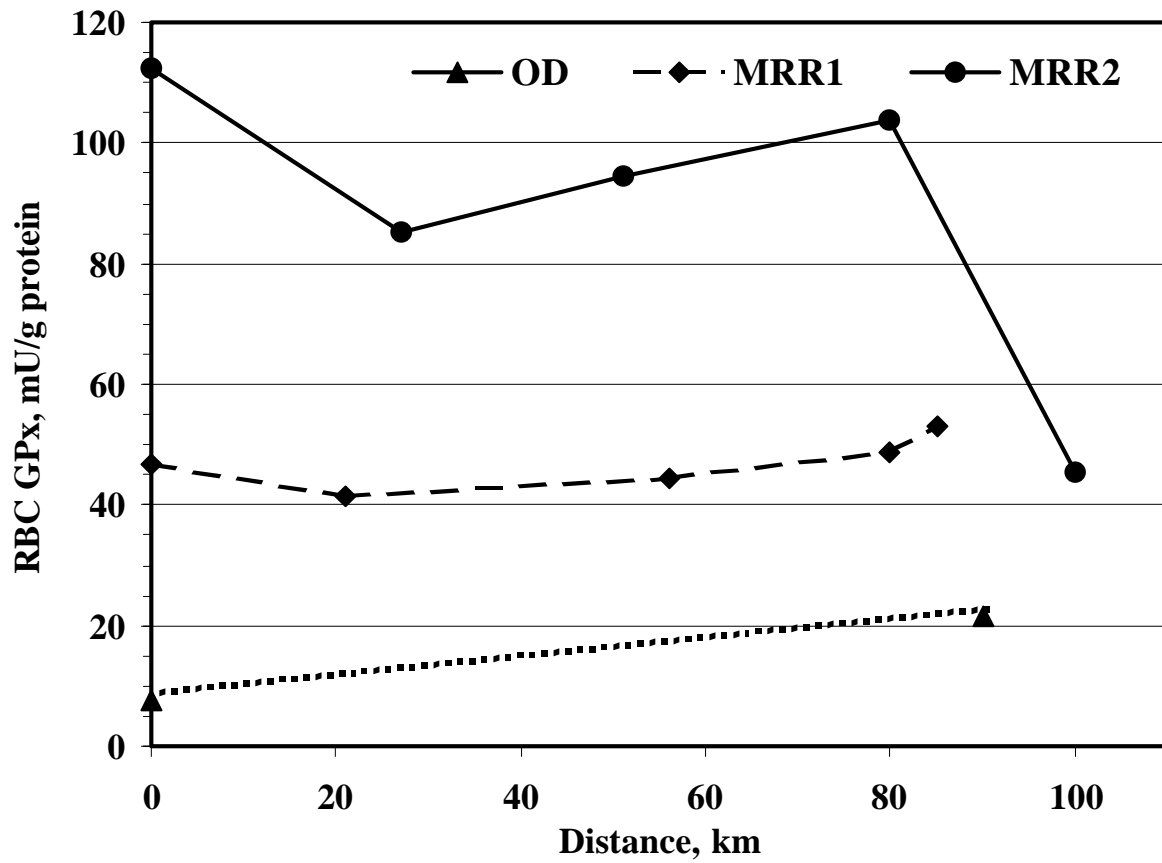

*Figure 9.* Plasma aspartate aminotransferase (AST) during OD, R1, and R2. The x-axis denotes distance in km, the veterinary check the day before the ride (PRE), and the recovery (REC).

*Figure 10.* Red blood cell glutathione peroxidase (RBC GPx) during OD, R1, and R2. The x-axis denotes distance in km, the veterinary check the day before the ride (PRE), and the recovery (REC).

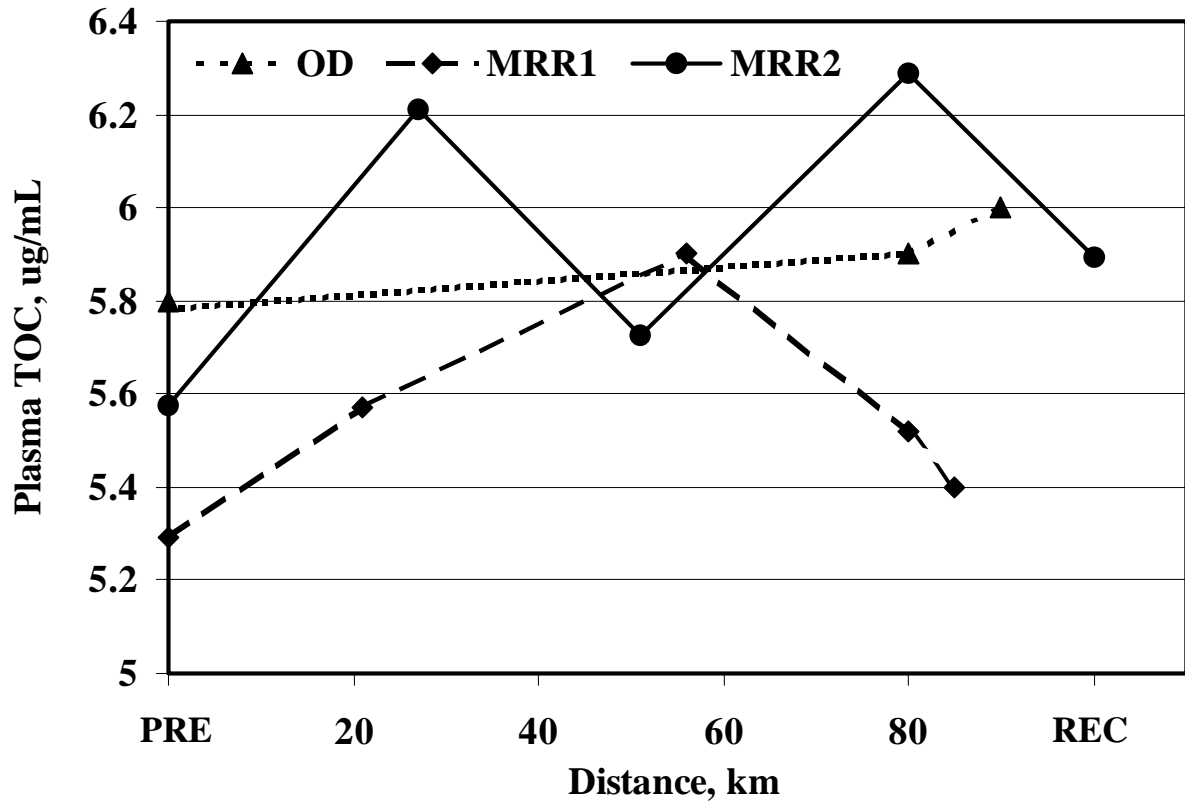

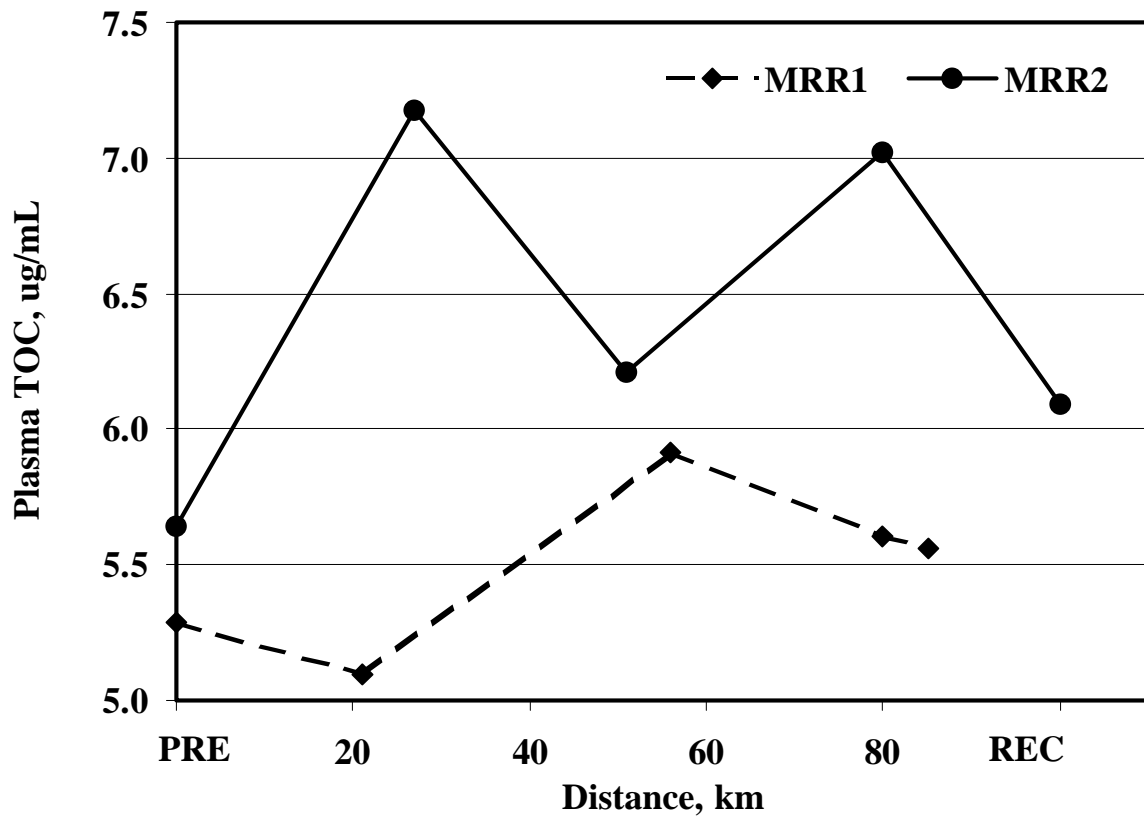

Figure 11. Plasma alpha-tocopherol (TOC) during OD, R1, and R2. The x-axis denotes distance in km, the veterinary check the day before the ride (PRE), and the recovery (REC).

*Figure 12.* Plasma alpha-tocopherol (TOC) adjusted for fluid shifts in the plasma using albumin during R1 and R2 (OD did not report albumin). The x-axis denotes distance in km, the veterinary check the day before the ride (PRE), and the recovery (REC).
