

LIST OF TABLES

Table 2-1. Statistical parameters for log-Normal frequency distribution of hydraulic conductivity (after Table 1 in Freeze, 1975)	25
Table 4-1. Summary of key differences between the three walls	44
Table 4-2. Characteristics of the compacted clay liners	48
Table 4-3. Chemical composition of Price's Fork water	55
Table 4-4. Characteristics of the soil-bentonite	60
Table 4-5. Characteristics of the support slurry	65
Table 5-1. Water level pairs used for W2 and W3 for average hydraulic conductivity measurements	93
Table 5-2. Shape factors used in evaluating the average hydraulic conductivity of W2 and W3	98
Table 5-3. Prediction of critical heads in hydraulic fracture tests	146
Table 6-1. Piezometer test results, W1	159
Table 6-2. Results of piezocone dissipation tests – W1	176
Table 6-3. Hydraulic conductivity of undisturbed samples – W1	178
Table 6-4. Comparison of hydraulic conductivity measurements for W1	179
Table 6-5. Flow rates through W2 during global average hydraulic conductivity measurements	183
Table 6-6. Average hydraulic conductivities from flow rates measured through W2	183
Table 6-7. Average hydraulic conductivities of Layers A through D in W2	183
Table 6-8. Piezometer test results, W2	186
Table 6-9. Hydraulic conductivity of undisturbed samples – W2	188
Table 6-10. Comparison of hydraulic conductivity measurements for W2	189

Table 6-11. Piezometer test results, W3	199
Table 6-12. Hydraulic conductivity of undisturbed samples – W3	202
Table 6-13. Comparison of hydraulic conductivity measurements for W3.....	203
Table 6-14. Comparison of soil-bentonite hydraulic conductivity values from different test methods.....	204
Table 7-1. Results of statistical analyses on case history hydraulic conductivity data sets.....	230
