

Appendix G: Moisture Content & Specific Gravity Test Data

Appendix G contains tables with values quantified for each connection, fracture and tensile strength perpendicular-to-grain specimen tested. Each group of tests was analyzed for moisture content and specific gravity values (see Chapter 4). Abbreviations for moisture content and specific gravity tables are defined as follows:

MC = Moisture content

SG = Specific gravity

$MC = (\text{Specimen wet weight} - \text{Specimen oven-dry weight}) / \text{Specimen oven-dry weight}$

$SG = \text{Specimen oven-dry weight} / \text{Specimen volume}$
