

Acknowledgements

I would like to express my deep appreciation to the individuals and organizations that helped me in this endeavor. It is an honor and the greatest delight of my life to be affiliated with all these wonderful people.

I will always be thankful to Dr. E. George Stern who offered and made possible my coming from Russia to Virginia Tech. I thank my adviser and friend Dr. Joe Loferski and his wife Karen who helped my family and myself to overcome difficulties of settling down in the United States. But most of all, I am obliged to my adviser and friend Dr. Dan Dolan. This study would not have been possible without his guidance, everyday support, and personal care.

I thank my committee members for their valuable comments and suggestions during my studies. I am particularly thankful to Mr. Phil Line for contributing his ideas into this research and directing the project closer to the practical needs.

I respectfully acknowledge the financial support given to the research project by the USDA/CSRS NRI Competitive Grant Program through award number 95-37103-2102. Also, I extend many thanks to the administration, faculty, and staff of Virginia Tech, College of Natural Resources, Department of Wood Science and Forest Products, and the Brooks Forest Products Research Center for their friendly advice and support.

I appreciate a lot of practical help that I received from Bob Carner, Angie Reigel, Carlile Price, and Kenny Albert. Special thanks go to Chris Sweet for his help in building the walls for this project. Thanks to my peer students who helped me tackle the walls. I would like to thank my colleague and friend Chris Heine. His constructive criticism and competitive spirit always set a higher plank for me, and our discussions always evoked new and better solutions.

Last, but not least thanks to my wife Yelena and my son Stepan for accompanying me in this endeavor with patience and understanding, for creating comfort in our home, and for their love and support.
