Essays on Privatization

Chiara Gratton-Lavoie

Abstract

Selling state-owned enterprises to the private sector has become a popular policy for governments all around the world.

Chapter 1 provides an historical perspective on privatization, and it describes the objectives and the privatization techniques that have been adopted by many governments since the late 70s. The chapter then focuses on two important issues in the privatization debate, the underpricing of shares and the effect of ownership on performance. It reviews the most significant theoretical and empirical contributions to the analysis of these two issues, and it introduces the questions addressed in the remaining chapters of this dissertation.

In Chapter 2 I consider a government that first privatizes a company and then competes for votes against a political opponent. The government’s objective is to choose the price of shares and the level of promotional effort to maximize its total net revenues. After the sale of the company to the public there is an election and the two parties announce what expropriation rate they would implement if they win the political competition. I show that in this context it is optimal for the party in power in the first period to actively promote the sale and to underprice the stock with respect to its true value, in order to increase the size of the shareholders’ interest group that will vote for the party announcing a low expropriation rate.

In Chapter 3 I estimate the long-term impact of the British privatization program of the 70s, 80s, and 90s, on the government's finances. For a large sample of British companies that were privatized in the years 1979 to 1994, regression analysis shows no effect of change in ownership on company's gross profitability. This information is then combined with estimates of all relevant costs (implicit and explicit) and revenues for each sale, to assess the long-term effect of the privatization policies on the government's net worth. The results show that "Selling the State" generated considerable losses for the British Government.
Acknowledgments

I want to express deep gratitude to my co-chairs and mentors, Dr. Nancy Lutz and Dr. Mark Stegeman. Without their help, their encouragement, and their patience this work would have not been possible.

I want to thank my committee members, Dr. Catherine Eckel, Dr. Charles Michaloupolos, and Dr. Susan Snyder for their valuable comments and suggestions. Their help and encouragement have been very important.

Special thanks to my friends Fatma Aksal, Wen Mao, Marina Marena, Luciano Mauro, Pamela Peele, Florenz and Vandana Plassmann, Elisabeth Petrino, Elena Podrecca, Sudipta Sarangi, and Michela Verardo.

Finally, I would like to thank my parents, Paola and Sergio Gratton, my sister Monica and my husband Andre for their love and their support.

I dedicate this dissertation to the memory of my father, Sergio Gratton. His love has never left me.
