

List of Tables

2.1	Abscissae and weight coefficients of the Gaussian quadrature formula	40
3.1	Hercules AS4/3502 graphite/epoxy lamina material properties	59
3.2	Near optimum feasible designs along with their failure load	68
4.1	Cure kinetic parameters for graphite/epoxy	73
4.2	Thermal properties for graphite/epoxy	74
4.3	Resin characteristics during cure	76
4.4	Fiber and resin constituent mechanical properties	78
6.1	Near optimum feasible designs along with their expected failure load obtained by the first design cycle	127
6.2	Near optimum feasible designs along with their expected failure load obtained by the second design cycle	129
6.3	Near optimum feasible designs along with their expected failure load obtained by the third design cycle	130
6.4	Near optimum feasible designs along with their expected failure load obtained by the second suggested design scheme	132
