

CRACK PATH SELECTION IN ADHESIVELY BONDED JOINTS

Buo Chen

Dissertation submitted to the Faculty of
Virginia Polytechnic Institute and State University
In partial fulfillment of the requirements for the degree of

DOCTOR OF PHILOSOPHY

In
Engineering Mechanics

David A. Dillard, Chair

John G. Dillard

John J. Lesko

Scott Case

Brian Love

David Y. Gao

November 15, 1999

Blacksburg, Virginia

Keywords: Locus of failure, crack path selection, mixed mode fracture, direction of cracking, surface preparation, adhesively bonded joints, T-stress, interfacial failure, cohesive failure, failure mode, alternating failure, directional stability.
