

Figure 1. Mean number of embryos/flask of 30 anthers from the heat treatment study. Letters above bars show significant differences by Student Newman Keul test at 5% level. The numbers on the x-axis refer to the duration in hours of the heat shock. Con was the control with no heat shock.

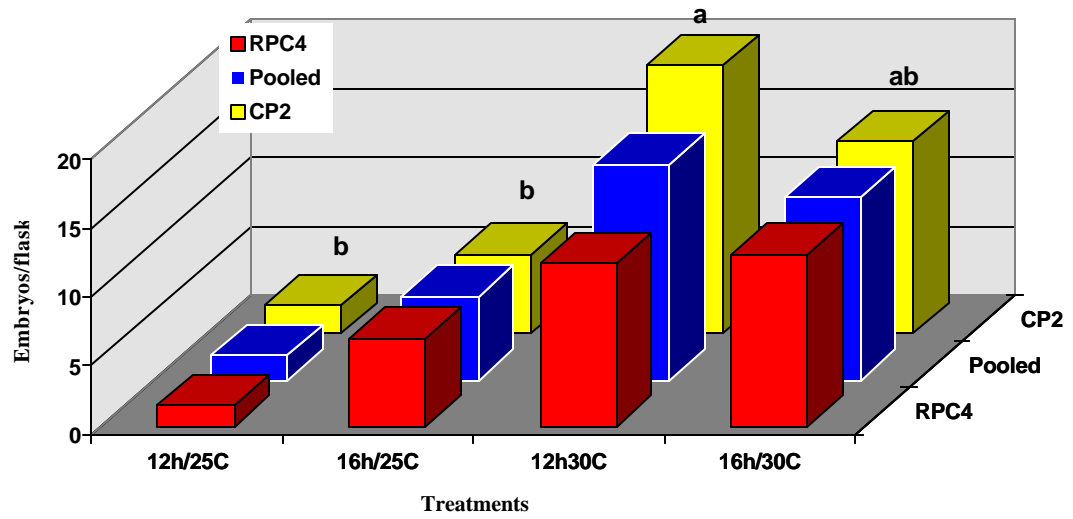

Figure 2. Mean number of embryos/flask of 50 anthers from the study on growing conditions of anther donor plants. Letters above bars show significant differences by Student Newman Keul test at 5% level.
