

Acknowledgments

I wish to thank my advisor, Prof. Thangavelu Kuppusamy, for his encouragement, suggestions, and guidance during the time I worked on this dissertation. I would also like to thank my committee members, Profs. J. Michael Duncan, Thomas Brandon, George Filz, and Marte Gutierrez, for the time they provided out of their busy schedules.

I want to thank the management of the U.S. Army Engineer Research and Development Center at the Waterways Experiment Station for providing time and resources to work on my dissertation. Special thanks to Dr. Bob Rohani, who provided guidance and encouragement, checked equations, and reviewed initial drafts of the dissertation. A note of thanks must also go to my coworkers for their friendship and encouragement.

Finally, I want to thank my wife Janet for being cheerfully patient and understanding over the many years that I worked on this dissertation.
