

## Acknowledgements

First and foremost, I thank Prof. A. A. (Louis) Beex for providing me a home at the DSP Research Laboratory. I appreciate his dedication to his students, teaching, and research. As my advisor and confidant, he has been invaluable in improving everything from my writing and presentation skills to my general personality. Without his help, constant encouragement, and support, this work would not have been possible.

I thank Profs. William Baumann and Hugh VanLandingham for their interest in this research and for their suggestions. I thank Profs. Dushan Borojevic, Peter Haskell, and Ira Jacobs for their time and effort in reviewing this work. I thank Profs. Joseph Ball and John Bay for their discussions on balanced realizations. I thank Prof. Amy Bell for helping me in many different ways.

I thank my parents for their love and affection. They taught me the importance of education and always encouraged me to work harder and better. I thank my sister and brother-in-law for their moral support. I thank my friend Sriram for helping me in more ways than I can think of.

All I have ever accomplished and all I will ever be I owe to three people – my parents and my advisor. I dedicate this dissertation to them.
