ACKNOWLEDGMENT

Acknowledgment is made with appreciation to Dr. Ahmad Safaai-Jazi for his continuous advice, help, and support during my Ph.D. research at Virginia Tech. Also, I would like to extend my thanks to my Ph.D. committee members: Dr. Ioannis M. Besieris, Dr. Guy J. Indebetouw, Dr. Sedki M. Riad, and Dr. Wayne A. Scales. Their time, advice, help, and interest in my research work are really appreciated.

Table of Contents

1. Introduction 1

1.1 PRESENTATION OF THE PROBLEMS AND SOLUTIONS 1

1.2 SCOPE OF INVESTIGATION 6

1.2.1 Design of Polarization-Maintaining Fibers With Zero Dispersion at 1.3 μm and 1.55 μm 6

1.2.2 Analysis and Design of Fiber With Zero Polarization-Mode Dispersion And Large Effective Area 7

1.2.3 Wedge-Shape Dielectric Waveguide With Metal-Coated Boundaries 8

2. Literature Survey 9

2.1 POLARIZATION IN SINGLE-MODE FIBERS 9

2.2 POLARIZATION-MAINTAINING FIBERS 11

2.2.1 Circular Polarization-Maintaining Fibers 11

2.2.2 Linear Polarization-Maintaining Fibers 12

2.2.2.1 Polarization-Maintaining Fibers With Side Pits and Side Tunnels 12

2.2.2.2 Polarization-Maintaining Fibers With Stress Induced Parts 14

2.2.2.3 Polarization-Maintaining Fibers With Geometrical Asymmetry 19

2.2.2.4 Polarization-Maintaining Fibers With Refractive Index Modulation 21

2.3 FIBERS / WAVEGUIDES WITH METAL BOUNDARIES 23

2.3.1 Planar Waveguide Polarizers 23

2.3.2 Fiber Polarizers 27
2.4 POLARIZATION-MODE DISPERSION (PMD) IN OPTICAL FIBERS 32
2.5 SUMMARY 33

3. Design of High-Birefringence and Single-Polarization Single-Mode Fibers 35

3.1 POLARIZATION-MAINTAINING FIBERS 35
3.1.1 Anisotropic Fibers 35
3.2 ANALYSIS 37
3.2.1 Propagation Constant and Birefringence 39
3.2.2 Dispersion 40
3.3 FIBER DESIGNS 41
3.3.1 High-Birefringence Fibers 41
3.3.1.1 Dispersion-Flattened Fibers 41
3.3.1.2 Dispersion Shifted Fibers 47
3.3.1.3 Dispersion -Unshifted Fibers 50
3.3.2 Single-Polarization Single-Mode Fibers (SPSM) 52
3.3.2.1 Single-Polarization Single-Mode Dispersion-Flattened Fibers 52
3.3.2.2 Single-Polarization Single-Mode Dispersion-Shifted Fibers 54
3.3.2.3 Single-Polarization Single-Mode Dispersion-Unshifted Fibers 57

4. Analysis and Design of Single-Mode Fiber with Zero Polarization-Mode Dispersion 61

4.1 POLARIZATION-MODE DISPERSION 61
4.2 SINGLE-MODE FIBERS WITH SMALL ELLIPTICITY 62
4.2.1 Analysis of Slightly Elliptical Multiple-Clad Fiber 62
4.2.1.1 Field Solutions 62
4.2.1.2 Boundary Conditions 65
4.2.2 Analysis of Four-Layers Fiber 67
4.2.2.1 Field Solutions and Characteristic Equations 67
4.2.2.2 Amplitude Coefficients 68
4.2.2.3 Birefringence Calculations 69
4.2.2.4 Effective Area (Aeff) and Mode-Field Diameter (MFD) 73
4.3 DESIGN OF ZERO POLARIZATION-MODE DISPERSION FIBER 74
4.4 TOLERANCE ANALYSIS 82
4.4.1 Polarization Mode Dispersion 82
4.4.2 Chromatic Dispersion 87
4.4.3 Effective Area and Mode-Field Diameter 91

5. Wedge-Shape Dielectric Waveguide Bounded by Conducting Planes 101

5.1 FIELD SOLUTIONS AND CHARACTERISTIC EQUATIONS 102
5.2 GUIDED MODE SOLUTIONS 105
5.2.1 TE and TM modes 105
5.2.2 Hybrid HE and EH Modes 106
5.3 SPECIAL CASES 106
5.3.1 $\varphi_o = \pi$ 106
5.3.2 $\varphi_o = \pi/2$ 107
5.3.3 $\varphi_o = \pi/n$, n an integer > 2 107

5.3.4 Arbitrary φ_o 107
5.4 WAVEGUIDE LOSSES 108
5.4.1 Conductor Loss 109
5.4.2 Dielectric Loss 109
5.5 NUMERICAL RESULTS AND DISCUSSION 110

6. Conclusion 117

Appendix A 120

Appendix B 124

References 127

List of Figures

2.1 The structure of a helical or spiral fiber 13

2.2 Side-pit fiber (a) cross section, (b) refractive index distribution versus x-axis 15

2.3 Cross sections of Bow-tie and PANDA fibers 17

2.4 Side view of a fiber optic polarizer with buffer layer 28

2.5 A partial metal-clad fiber (a) cross section view of fiber optic polarizer, (b) side view of in-line fiber optic polarizer 29

2.6 D-shaped fiber polarizer with elliptical core 31

3.1 Refractive-index profiles used for the design of high-birefringence and single-polarization single-mode fibers 38

3.2 Normalized propagation constant versus wavelength for the y-polarization of fundamental LP_{01} mode for fibers F1 to F5 44

3.3 Normalized propagation constant versus wavelength for the x-polarization of fundamental LP_{01} mode for fibers F1 to F5 45

3.4 Birefringence versus wavelength for fibers F1 to F5 46

3.5 Dispersion versus wavelength for the y-polarization of fundamental LP_{01} mode for fibers F1 and F2 48

3.6 Dispersion versus wavelength for the y-polarization of fundamental LP_{01} mode for fibers F3 to F5 51

3.7 Normalized propagation constant versus wavelength for the x and y polarizations of fundamental LP_{01} mode for fibers F6 and F7 55

3.8 Dispersion versus wavelength for the y-polarization of fundamental LP_{01} mode for fibers F6 and F7 56

3.9 Normalized propagation constant versus wavelength for the x and y polarizations of fundamental LP_{01} mode for fibers F8 and F9 58
3.10 Dispersion versus wavelength for the y-polarization of fundamental LP_{01} mode for fibers F8 and F9 59

4.1 Cross section view of multiple-clad elliptical fiber consisting of N layers 64
4.2 Refractive-index profile used for the design of zero PMD fiber 75
4.3 Normalized birefringence ($\delta\beta_{xy}/e$) versus wavelength of fundamental LP_{01} mode 77
4.4 Normalized propagation constant b versus wavelength of fundamental LP_{01} mode 78
4.5 Dispersion versus wavelength of fundamental LP_{01} mode 79
4.6 Effective area versus wavelength of fundamental LP_{01} mode 80
4.7 Mode-Field Diameter versus wavelength of fundamental LP_{01} mode 81
4.8 Bending loss versus bending radius of fundamental LP_{01} mode 83
4.9 Variations of normalized birefringence ($\delta\beta_{xy}/e$) versus wavelength of fundamental LP_{01} mode for radius a_1 variations of $\pm 1\%$ and $\pm 2\%$ 84
4.10 Variations of normalized birefringence ($\delta\beta_{xy}/e$) versus wavelength of fundamental LP_{01} mode for radius a_2 variations of $\pm 1\%$ and $\pm 2\%$ 85
4.11 Variations of normalized birefringence ($\delta\beta_{xy}/e$) versus wavelength of fundamental LP_{01} mode for radius a_3 variations of $\pm 1\%$ and $\pm 2\%$ 86
4.12 Variations of chromatic dispersion versus wavelength of fundamental LP_{01} mode for radius a_1 variations of $\pm 1\%$ and $\pm 2\%$ 88
4.13 Variations of chromatic dispersion versus wavelength of fundamental LP_{01} mode for radius a_2 variations of $\pm 1\%$ and $\pm 2\%$ 89
4.14 Variations of chromatic dispersion versus wavelength of fundamental LP_{01} mode for radius a_3 variations of $\pm 1\%$ and $\pm 2\%$ 90

4.15 Variations of effective area versus wavelength of fundamental LP_{01} mode for radius a_1 variations of ±1% and ±2% 93

4.16 Variations of effective area versus wavelength of fundamental LP_{01} mode for radius a_2 variations of ±1% and ±2% 94

4.17 Variations of effective area versus wavelength of fundamental LP_{01} mode for radius a_3 variations of ±1% and ±2% 95

4.18 Variations of mode-field diameter versus wavelength of fundamental LP_{01} mode for radius a_1 variations of ±1% and ±2% 97

4.19 Variations of mode-field diameter versus wavelength of fundamental LP_{01} mode for radius a_2 variations of ±1% and ±2% 98

4.20 Variations of mode-field diameter versus wavelength of fundamental LP_{01} mode for radius a_3 variations of ±1% and ±2% 99

5.1 Geometry and coordinates for a wedge-shape dielectric waveguide bounded by conducting planes at $\varphi = 0$ and $\varphi = \varphi o$ 103

5.2 Normalized propagation constant, b, versus normalized frequency, ak_o, for the fundamental modes of wedge-shape dielectric waveguide with $\varphi_o = \pi$, $2\pi/3$, and π/n; $n \geq 2$, and with $\varepsilon_{r1} = 2.25$, and $\varepsilon_{r2} = 1$. The fundamental modes for these values of φ_o are HE_{11}, $HE_{3/2,1}$, and TE_{01}, respectively 111

5.3 Variations of normalized attenuation coefficients of conductor, $\bar{\alpha}_c$, and dielectric, $\bar{\alpha}_d$, versus normalized frequency, ak_o, for the HE_{11} mode in a wedge-shape dielectric waveguide with $\varphi_o = \pi$, and $\varepsilon_{r1} = 2.25$, and $\varepsilon_{r2} = 1$ 114

5.4 Variations of normalized attenuation coefficients of conductor, $\bar{\alpha}_c$, and dielectric, $\bar{\alpha}_d$, versus normalized frequency, ak_o, for the $HE_{3/2,1}$ mode in a wedge-shape dielectric waveguide with $\varphi_o = 2\pi/3$, and $\varepsilon_{r1} = 2.25$, and $\varepsilon_{r2} = 1$ 115

5.5 Variations of normalized attenuation coefficients of conductor, $\bar{\alpha}_c$, and dielectric, $\bar{\alpha}_d$, versus normalized frequency, ak_o, for the TE_{01} mode in a wedge-shape dielectric waveguide with $\varphi_o = \pi/n$; n an integer, and $\varepsilon_{r1} = 2.25$, and $\varepsilon_{r2} = 1$ 116

List of Tables

2.1 Classification of Polarization-Maintaining Fibers 10

3.1 Compositions of Materials Used in The Design of Polarization-Maintaining Fibers 42

3.2 Materials and Radii for Polarization-Maintaining Dispersion-Flattened Fibers 43

3.3 Cutoff Wavelength of The LP_{11} Mode For the Designed Fibers 47

3.4 Materials and Radii for Polarization-Maintaining Dispersion-Shifted and -Unshifted Fibers 49

3.5 Materials and Radii of Designed SPSM Fibers 54

3.6 Summary of Characteristics For The Designed Polarization-Maintaining Fibers 60

4.1 Materials and Radii of Designed Dispersion-Shifted Fiber For Zero PMD 76

4.2 Transmission Properties of Zero PMD Dispersion-Shifted Fiber At $\lambda = 1.55\ \mu m$ 82

4.3 The Wavelength At Which Normalized Birefringence Peak Occurs As The Radii a_i (i = 1, 2, and 3) Of The Fiber Changes 87

4.4 Chromatic Dispersion Values in ps/(nm.km) At $\lambda = 1.55\ \mu m$ As The Radius a_i (i = 1, 2, and 3) Of The Fiber Changes 91

4.5 The Wavelength At Which Chromatic Dispersion Is Zero Or Close To Zero (less than 0.09 ps/(nm.km)) As The Radius a_i (i = 1, 2, and 3) Of The Fiber Changes 92

4.6 Effective Area Values in μm^2 At λ = 1.55 μm As The Radius a_i (i = 1, 2, and 3) Of The Fiber Changes 96

4.7 Mode-Field Diameter Values in μm At λ = 1.55 μm As The Radius a_i (i = 1, 2, and 3) Of The Fiber Changes 100

5.1 Single-Mode Frequency Range For Different Wedge Angles 112
