

Acknowledgments

First and foremost, my parents, Chander and Veena Arya, who have always given me the strength and wisdom to be sincere in my work, for setting high moral standards and supporting me through their hard work, and for their unselfish love and affection. This dissertation is dedicated to them.

I am indebted to Prof. Ira Jacobs for giving me the opportunity to work under his insightful guidance, and more importantly for teaching me deep respect and admiration for the field of optical communications. Working with him has been the most rewarding experience of my life, and I will cherish it for ever.

A special thanks to Prof. Rick Claus for helping me make FEORC my home away from home, for the incredible opportunities that he has given me, and for his unqualified encouragement and support over the last four years. I will always cherish and admire his unique ability to generate enthusiasm among his students. I also thank Prof. Werner Kohler for many interesting and stimulating discussions, and Profs. Besieris and Woerner for serving on my Ph.D. committee.

To Marten de Vries, my best friend and mentor at FEORC, a big thanks for all his invaluable career advice and encouragement at FEORC, his company kept me sane over the years !

I am also grateful to Prof. Anbo Wang for his help throughout my graduate studies. Special thanks also to Dr. Vikram Bhatia and Dr. Ashish Vengsarker for unknowingly setting high standards for me and being an inspiration for the last few years.

All the staff and students that I interacted with at FEORC, especially Linda Jones, David Sherrer, Mark Jones, Angie Plante, Rajat Dhawan, Carvel Holton, Noel Zabaronick, Scott Meller, and others, I will always appreciate your cheerful and helpful attitude and cherish your company.
