

Table of Contents

List of Tables	viii
List of Figures	xi
Nomenclature	xix

1.0 Introduction

1.1 The Earth Radiation Budget	1
1.2 Earth Radiation Budget Measurements	2
1.3 The Earth Radiation Budget Experiment (ERBE)	3
1.4 The Clouds and the Earth's Radiant Energy System (CERES) Mission	4
1.5 The Thermal Radiation Group	5
1.6 Motivation and Goals	7
1.7 Organization	8

2.0 Radiometric Design

2.1 The Radiometric System	9
2.2 Optical Design Considerations	10
2.2.1 Off-axis mirror systems	11
2.2.2 Cassegrain-type optics	11

2.3 Radiometric Bandpass Selection	12
2.4 Radiometric Detectors	13
2.4.1 Thermal detectors	14
2.4.2 Photon counters	14
2.5 Sampling Criteria	15
2.5.1 Spatial versus temporal sampling rates	15
2.5.2 Sampling errors	16
2.6 Signal Conditioning	17
2.7 Radiometric Calibration	17
2.7.1 Mathematical modeling	18
2.7.2 Spectral characterization	19
2.7.3 Longwave radiometric sources	20
2.7.4 Shortwave radiometric sources	21
2.8 Calculation of Top-Of-Atmosphere (TOA) Flux	21
2.8.1 Inversion of filtered radiances to obtain unfiltered radiances	21
2.8.2 Conversion of radiance to TOA flux	23
2.9 Relevance to Current Effort	24
3.0 CERES Scanning Thermistor Bolometer Radiometer	
3.1 Instrument	25
3.2 Radiometric Channels	27
3.3 Signal Conditioning Electronics	29
3.3.1 Pre-amplifier	29
3.3.2 Bessel filter	29
3.4 Ground Calibration	30
3.4.1 Longwave sources	31
3.4.2 Shortwave sources	32
3.5 Inflight Calibration	32
3.5.1 Longwave sources	33
3.5.2 Shortwave sources	33

3.6 Flight Algorithms	34
4.0 Model Description	
4.1 History	36
4.2 Optical and Radiative Model	37
4.3 Thermal Diffusion Model of the Detector Module Assembly	39
4.4 Electrical Diffusion Model	41
4.5 Detector Circuit Model	41
5.0 Results	
5.1 Detector Module Assembly Responsivity and Time Constant Validation-Flight Hardware and Model	45
5.2 Detector Module Assembly Time Response Function Validation- Flight Hardware and Model	47
5.3 Radiometric Calibration	51
5.3.1 Spectral characterization implementation	52
5.3.2 Calculation of instrument gains	54
5.3.2.1 determination of A_V	55
5.3.2.2 determination of A_S	57
5.3.2.3 determination of A_H	57
5.3.2.4 determination of A_B	58
5.3.2.5 determination of A_D	59
5.4 Removal of Non First-Order Response Characteristics Through Numerical Filtering	59
5.4.1 Numerical filter validation	61
5.5 Determination of the Optical Point Spread Function	63
5.5.1 Significance of the blur circle	65
5.5.2 Optical Point Spread Function	66
5.6 Determination of the Instrument Point Spread Function	66
5.6.1 Mapping of the PSF on cloud imager data	67

5.6.2 Centroid calculation	68
5.6.3 Importance of scan rate	69
5.6.3.1 nadir scan	69
5.6.3.2 cross-track mode	70
5.6.3.3 bi-axial mode	70
5.7 Determination of the CERES Instrument Transfer Function	72
5.8 Impact on Instrument Performance of Mismatched or Degrading Detectors	73
5.9 Integration of the Atmospheric Radiation Transfer Model with the CERES Instrument Model	75
5.9.1 Field-of-view optimization	77
5.10 ERBE Pathfinder Experiment	78
5.10.1 Shortwave results	80
5.10.2 Longwave results	81
5.11 Autoregression Analysis	81
6.0 Conclusions and Recommendations	
6.1 Conclusions	85
6.2 Recommendations	86
Bibliography	166
