

Table of Contents

Chapter 1	Introduction	1
Chapter 2	Background of Diffusion Models	5
2.1	Molecular Models	5
2.2	Free Volume Models	7
2.3	Literature on Diffusion: Effects of Size, Shape, and Chemical Nature	9
Chapter 3	Experimental	14
3.1	Materials	14
3.1.1	R-410 Adhesive Laminate	14
3.1.2	Penetrants	14
3.2.	Adhesive Preparation	16
3.3	FTIR-ATR Spectroscopy	16
3.4	Dynamic Solvent Mass Uptake	17
3.5	Dynamic Mechanical Analysis	17
3.6	Density Evaluation	19
3.7	Stress-Strain Measurement	19
Chapter 4	FTIR-ATR Diffusion Study	21
4.1	Introduction	21
4.2	Theory	21
4.3	Experimental Considerations	25
4.4	Quantitative Considerations	26
4.4.1	Wavelength Dependence	27
4.4.2	Dispersion Effects	27
4.5.0	Literature Survey	31
4.6.0	Development of an FTIR-ATR Model and Technique	36
4.7	Design of ATR Cell	43
4.8	Optical Property Evaluation	46
4.9	Data Analysis	47
4.9.1	Simplex Methodology	47
4.10	Testing of Linear Programming	48
4.11	Results and Discussion	50
4.11.1	Analysis of Absorption Spectra	50
4.12	Summary	59

Chapter 5	Mass Uptake of Penetrants	62
5.1	Introduction	62
5.2	Dynamic Solvent Uptake of Linear Alkanes	62
5.2.1	Temperature Effects and Activation Parameters	82
5.3	Dynamic Solvent Uptake of Esters	97
5.3.1	Temperature Effects and Activation Parameters	115
5.4	Evaluation of Polymer-Penetrant Interaction Parameter	123
5.4.1	Evaluation of Crosslink Density Using Tensile Tests	123
5.4.2	Evaluation of Chi Interaction Parameter	126
5.5	Discussion	131
5.5.1	Molecular Size Considerations	131
5.5.2	Shape Considerations	135
5.5.3	Chemical Considerations	155
5.6	Summary	166
Chapter 6	Dynamic Mechanical	170
6.1	Introduction	170
6.2	Background	171
6.3	Concept of Distribution of Relaxation Times	177
6.4	Temperature-Frequency Master Curves	185
6.5	Diffusion-Time Master Curves	214
6.6	Relaxation Behavior	227
6.6.1	Evaluation of H-N and KWW Parameters	227
6.6.2	KWW Beta Parameter	228
6.6.3	Molecular Relaxation Times	232
6.7	Summary	235
Chapter 7	Results and Discussion	238
Chapter 8	Conclusions	246
	Future Work	248
	Appendix	249
