

LIST OF FIGURES

Figure		Page
1-1.	The Occoquan Watershed with boundaries and sampling stations shown. (Taken from OWML, 1998).....	1 - 2
2-1.	The hypolimnetic total phosphorus as a function of Ox-N (nitrate and nitrite) for low DO at RE30, 1973 – 1997. (Taken from OWML, 1998).....	2 - 7
2-2.	Redox potential of some important redox couples in natural water at pH 7 (dark arrows) and pH 8 (light arrows). The redox potential is calculated for activities {Red} = 1 and {OX} = 1; in the case of.....	2 - 12
2-3.	Representative ranges of redox intensity in soil and water. Range 1 is for oxygen-bearing waters. Range 2 is representative of many ground and soil waters where O ₂ has been consumed (by	2 - 14
2-4.	Transformation of Fe(II, III) at an oxic-anoxic boundary in a water or sediment column. Note: The Fe(III) peak lays on top of Fe(II) peak. (Taken from Stumm and Morgan, 1996).....	2 - 15
2-5.	Time series plot of average E _h values and their confidence interval from twelve duplicated experiments with Kashimadai soil. (Taken from Ichiro and Kazuo, 1968).....	2 - 21
2-6.	E _h and pH of flooded soils amended with glucose. (Taken from Bell, 1969).....	2 - 22
2-7.	Schematic diagram of an electrochemical cell for the measurement of redox potential Eh. The potential difference is measured between an inert electrode (usually Pt) in contact with a solution	2 - 25
2-8.	Electrode polarization curves for oxygen-containing solutions in the presence (nonequilibrium) of some Fe ²⁺ . Curves are schematic but in accord with available data at significant points. (Taken from.....	2 - 27
2-9.	Diagram showing ten computed Nernstian Eh values versus field-measurement Eh values for the same samples measured with a platinum electrode. (Modified from Lindburg and Runnells.....	2 - 35
2-10.	Comparison of transformations of nitrate and nitrite carried out by various microorganisms showing the uniqueness of denitrification, the one pathway that does not lead to ammonia production. (Taken.....	2 - 39

Figure		Page
2-11.	The denitrification rate's response (a) and N ₂ O production (b) to nitrate additions at the sampling sites in April 1997 (solid circle). For the Ivelet Bridge (km 10.9) and Wiske sites (km -1.7, 86.1) the.....	2 - 45
2-12.	Nitrogen cycle (taken from ERLORD, 1985).....	2 - 58
2-13.	(a) Schematic representation of the classical nitrogen cycle in sediments dominated by coupled nitrification-denitrification. (b) The nitrogen cycle in sediments modified to include reactions.....	2 - 61
2-14.	Nitrate and solid phase manganese profiles from two sediment cores. The nitrate concentrations at the sediment surface (depth = 0) were assumed to be the same as the underlying water.....	2 - 62
2-15.	Reservoirs and fluxes of manganese. J _{1,2} = the flux of manganese from the surface-water reservoir, J _{2,1} = the flux of manganese returning to the surface water, J _{2,3} = the flux of the bottom water.....	2 - 65
2-16.	SOD as a function of the surface area to water volume ratio: results from in situ, laboratory tank, and laboratory core experiments. (Taken from Yung, 1990).....	2 - 69
3-1.	Schematic of the original reactor designed by Grizzard (1977).....	3 - 2
3-2.	Photograph of the body of the original design reactor.....	3 - 2
3-3.	Photograph of lid of the original reactor.....	3 - 3
3-4.	Schematic of the new reactor design.....	3 - 4
3-5.	Photograph of the new reactor body.....	3 - 6
3-6.	Photograph of the new reactor lid.....	3 - 6
3-7.	Electrode and glass tube insertion point arrangement on the lid of the new reactor.....	3 - 7
3-8.	Detail of the motor assembly and seal around the motor shaft.....	3 - 8
3-9.	Diagram of the equipment configuration for the first experiment.....	3 - 10
3-10.	Location of the sediment sampling site for the first, second, third, and fifth experiments. The aerial photograph is a mosaic of the digital orthophoto quarter quadrangles over the Occoquan.....	3 - 11

Figure	Page
3-11.	Photograph of a 50-mL beaker filled to the rim with sediment..... 3 - 14
3-12.	The location of sediment sampling sites of the fourth experiment. The aerial photograph is a mosaic of the digital orthophoto quarter quadrangles over the Occoquan Reservoir (USGS, 1994)..... 3 - 17
3-13.	Diagram of the equipment configuration for the fourth experiment..... 3 - 17
3-14.	Diagram of the equipment configuration for the fifth experiment..... 3 - 19
3-15.	Pressure release valve for controlling the N ₂ gas pressure in the reactor headspace..... 3 - 20
3-16.	Diagram of the equipment configuration for the Sixth Experiment..... 3 - 22
3-17.	Photograph of the sixth experiment set up..... 3 - 22
3-18.	Photograph of the feed water reservoir in the 4 °C refrigerator..... 3 - 23
3-19.	Photograph of the nitrogen gas tank..... 3 - 24
3-20.	The locations of sediment sampling sites of the sixth experiment. The aerial photograph is a mosaic of the digital orthophoto quarter quadrangles over the Occoquan Reservoir (USGS, 1994)..... 3 - 25
4-1.	Oxidized nitrogen record in the bottom water (10 feet and below) of Occoquan Reservoir at ST40, RE30, RE20, and RE02 in 2000..... 4 - 3
4-2.	Oxidized nitrogen record in the bottom water (10 feet and below) of Occoquan Reservoir at ST40, RE30, RE20, and RE02 from 1982 to 2000..... 4 - 3
4-3.	Average longitudinal oxygen concentration profile in the summer of 1982 to 2000 along the Occoquan Reservoir..... 4 - 4
4-4.	Effective depth and detention time profile along the Occoquan Reservoir. The flow rates used to calculate detention times are listed in Appendix D..... 4 - 4
4-5.	Time series of fourth experiment nitrate concentrations in feed water (Inf), Reactor 1 (R1), Reactor 2 (R2), and the effluent (Eff)..... 4 - 5
4-6.	Time series of fourth experiment total phosphorus concentrations in feed water (Inf), Reactor 1 (R1), Reactor 2 (R2), and the

Figure	Page
effluent (Eff).....	4 - 6
4-7. Time series of first-order denitrification-rate constants (K_{NO_3}) in Reactor 1 (R1), Reactor 2 (R2), and Reactor 3 of Experiment Four.....	4 - 7
4-8. Time series of reactor DO in the fifth experiment.....	4 - 9
4-9. Time series of fifth experiment nitrate concentrations in the influent (Inf) and effluent (Eff).....	4 - 9
4-10. Time series of first-order denitrification-rate constants (K_{NO_3}) in the fifth experiment.....	4 - 10
4-11. Time series of sixth experiment dissolved oxygen concentrations in the solution of the first (R1) and second (R2) reactors.....	4 - 11
4-12. Time series of sixth experiment nitrate concentrations in the influent (Inf), first reactor (R1) and effluent (Eff).....	4 - 11
4-13. Time series of sixth experiment denitrification-rate constants in the first (R1) and second (R2) reactors.....	4 - 12
4-14. Time series of the rates of nitrogen transformations and dissolved oxygen concentrations in the first reactor of Experiment 6.....	4 - 15
4-15. Time series of the rates of nitrogen transformations in the second reactor of Experiment 6.....	4 - 15
4-16. Time series of the sixth experiment soluble manganese (SMN), dissolved oxygen (DO), and nitrate (NO_3) in Reactor 1.....	4 - 16
4-17. Time series of Experiment 7 nitrate (NO_3), total Kjeldahl nitrogen (TKN), ammonia (NH_3), and manganese (Mn) in the seventh experiment...	4 - 18
4-18. Profile of sediment reactive manganese along the Occoquan Reservoir from the tail waters on Bull Run arm to RE15.....	4 - 21
4-19. Time series of sixth experiment dissolved oxygen concentrations and E_7 in the water column of the first (R1) and second (R2) reactors.....	4 - 23
4-20. Time series of Experiment 6 E_7 and soluble manganese (SMn) in the water column of the first (R1) and second (R2) reactors.....	4 - 24

Figure		Page
4-21.	Time series of Experiment 6 E ₇ and soluble iron (SFe) in the solution of first reactor (R1), and second (R2) reactors.....	4 - 26
4-22.	Time series of Experiment 7 E ₇ and nitrate (NO ₃) concentrations in the solution.....	4 - 29
4-23.	Time series of Experiment 7 E ₇ , soluble manganese (SMn), soluble iron (SFe) in the solution.....	4 - 29
4-24.	Time series of nitrate (NO ₃ ⁻ -N), total phosphorus (TP), orthophosphate phosphorus (OP), soluble managanese (SMn), and soluble iron (SFe) in Reactor 1 of Experiment 6.....	4 - 33
4-25.	Paired time series of predicted total phosphorus water column concentrations using the release rate reported by McLaughlin (1981) and the speculated current release rate.....	4 - 33
4-26.	Historic total phosphorus data in the bottom waters of the reservoir at Station RE02.....	4 - 34
4-27.	Time series of total phosphorus (TP), DO, and oxidized nitrogen (Ox-N) in the bottom waters at RE02 from 1998 to 2000.....	4 - 35
4-28.	Time series of total phosphorus (TP), DO, and oxidized nitrogen (Ox-N) in the bottom waters at RE30 from 1998 to 2000.	4 - 35
4-29.	Time series of total phosphorus (TP), DO, and oxidized nitrogen (Ox-N) in the bottom waters at RE15 from 1998 to 2000.....	4 - 36
B-1.	Time series plot of the mixing test data.....	B - 2
D-1.	Comparison between the actual reservoir and the sixth-run reactors.....	D - 6
E-1.	Screen capture of user interface of the data acquisition software.....	E - 3
E-2.	Screen capture of a portion of the software logic.....	E - 4
F-1.	Time series of first experiment nitrate concentrations in the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 4
F-2.	Time series of first experiment total Kjeldahl nitrogen concentrations in the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the.....	F - 4
F-3.	Time series of first experiment orthophosphate concentrations in	

Figure		Page
	the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 5
F-4.	Time series of first experiment total phosphorus concentrations in the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 5
F-5.	Time series of first experiment COD in the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent.....	F - 6
F-6.	Time series of first experiment soluble iron concentrations in the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 6
F-7.	Time series of first experiment soluble manganese concentrations in the fresh feed water (Feed A), the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 7
F-8.	Time series of first experiment E_h in the water column (Water) and sediment surface (Sediment).....	F - 7
F-9.	Time series of second experiment nitrate concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 9
F-10.	Time series of second experiment ammonia concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 9
F-11.	Time series of second experiment total Kjeldahl nitrogen concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 10
F-12.	Time series of second experiment orthophosphate concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 10
F-13.	Time series of second experiment total phosphorus concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 11
F-14.	Time series of second experiment COD in the fresh feed water (Feed A) and the effluent (Eff).....	F - 11
F-15.	Time series of second experiment soluble iron concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 12
F-16.	Time series of second experiment soluble manganese concentrations in the fresh feed water (Feed A) and the effluent (Eff).....	F - 12

Figure		Page
F-17.	Time series of second experiment pH.....	F - 13
F-18.	Time series of second experiment E_h in the water column (Water) and sediment surface (Sediment). The E_h was not corrected to E_7 because the pH was recorded only once a day while the E_h was.....	F - 13
F-19.	Time series of third experiment reactor DO.....	F - 16
F-20.	Time series of third experiment nitrate concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 16
F-21.	Comparison between measured effluent nitrate concentrations (Mea Eff), and predicted effluent nitrate concentrations in case of mixing only (Pre Eff Mixing Only) and in case of denitrification.....	F - 17
F-22.	Time series of third experiment ammonia concentrations in the (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff). Many data points.....	F - 17
F-23.	Time series of third experiment total Kjeldahl nitrogen concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B),.....	F - 18
F-24.	Time series of third experiment orthophosphate concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 18
F-25.	Time series of third experiment total phosphorus concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent.....	F - 19
F-26.	Time series of third experiment COD concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent (Eff).....	F - 19
F-27.	Time series of third experiment soluble iron concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent.....	F - 20
F-28.	Time series of third experiment soluble manganese concentrations in the fresh feed water (Feed A) and the feed water 24 hours after it was taken out of the refrigerator (Feed B), and the effluent	F - 20
F-29.	Time series of third experiment alkalinity concentrations in the fresh feed water (Feed A) and the effluent (Eff). The alkalinity had	

Figure	Page
	not been measured until Day 14..... F - 21
F-30.	Time series of third experiment reactor pH..... F - 21
F-31.	Time series of third experiment E_h in the water column (Water) and surface sediment (Sediment). The E_h was not corrected to E_7 because the pH was only measured daily while the Eh was..... F - 22
F-32.	Time series of fourth experiment nitrate concentrations in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1), Reactor 2..... F - 24
F-33.	Time series of fourth experiment ammonia concentrations in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1), Reactor 2..... F - 24
F-34.	Time series of fourth experiment total Kjeldahl nitrogen concentrations in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B)..... F - 25
F-35.	Time series of fourth experiment orthophosphate concentrations in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1)..... F - 25
F-36.	Time series of fourth experiment total phosphorus concentrations in the freshfeed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1)..... F - 26
F-37.	Time series of fourth experiment COD in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1), Reactor 2 (R2), and..... F - 26
F-38.	Comparison between the COD of the fresh feed water (Feed A) and the feed water 24 hours after it had been taken out of the refrigerator (Feed B)..... F - 27
F-39.	Time series of fourth experiment soluble iron in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1), Reactor 2 (R2)..... F - 27
F-40.	Time series of fourth experiment soluble manganese in the fresh feed water (Feed A), the feed water 24 hours after it had been taken out of the refrigerator (Feed B), Reactor 1 (R1), Reactor 2 (R2)..... F - 28
F-41.	Time series of fourth experiment pH in Reactor 1 (R1), Reactor 2

Figure	Page
(R2), and Reactor 3 (R3).....	F - 28
F-42. Time series of fourth experiment E_h of Reactor 1 in the water column (Water) and surface sediment (Sediment). The E_h was not corrected to E_7 because the pH was recorded daily while the E_h	F - 29
F-43. Time series of fourth experiment E_h of Reactor 2 in the water column (Water) and surface sediment (Sediment). The E_h was not corrected to E_7 because the pH was recorded daily while the E_h	F - 29
F-44. Time series of fourth experiment E_h of Reactor 3 in the water column (Water) and surface sediment (Sediment). The E_h was not corrected to E_7 because the pH was recorded daily while the E_h	F - 30
F-45. Time series of fifth experiment E_7 in the water column (Water) and in the surface sediment (Sediment).....	F - 33
F-46. Time series of fifth experiment reactor DO.....	F - 33
F-47. Time series of fifth experiment pH in the influent (Inf) and reactor (Reactor).....	F - 34
F-48. Time series of fifth experiment nitrate concentrations in the influent (Inf) and effluent (Eff).....	F - 34
F-49. Time series of fifth experiment ammonia concentrations in the influent (Inf) and effluent (Eff).....	F - 35
F-50. Time series of fifth experiment total Kjeldahl nitrogen in the influent (Inf) and Effluent (Eff).....	F - 35
F-51. Time series of fifth experiment orthophosphate concentrations in the influent (Inf) and effluent (Eff).....	F - 36
F-52. Time series of fifth experiment total phosphorus concentrations in the influent (Inf) and effluent (Eff).....	F - 36
F-53. Time series of fifth experiment COD in the influent (Inf) and effluent (Eff).....	F - 37
F-54. Time series of fifth experiment alkalinity in the influent (Inf) and effluent (Eff).....	F - 37
F-55. Time series of fifth experiment soluble iron in the influent (Inf)	

Figure	Page
	and effluent (Eff)..... F - 38
F-56.	Time series of fifth experiment soluble manganese in the influent (Inf) and effluent (Eff)..... F - 38
F-57.	Time series of sixth experiment dissolved oxygen concentrations in the solution of the first (R1) and second (R2) reactors. DO in Reactor 2 was not measured until Day 18 because, during the..... F - 40
F-58.	Time series of sixth experiment E_7 in the solution of the first (R1) and second (R2) reactors..... F - 40
F-59.	Time series of sixth experiment E_7 in the sediment of the first (R1) and second (R2) reactors..... F - 41
F-60.	Time series of sixth experiment pH in the influent (Inf), the first (R1) and second (R2) Reactors..... F - 41
F-61.	Time series of sixth experiment nitrate concentrations in the influent (Inf), first reactor (R1) and effluent (Eff)..... F - 42
F-62.	Time series of sixth experiment ammonia concentrations in the influent (Inf), first reactor (R1) and effluent (Eff)..... F - 42
F-63.	Time series of sixth experiment total Kjeldahl nitrogen concentrations in the influent (Inf), first reactor (R1) and effluent (Eff)... F - 43
F-64.	Time series of sixth experiment orthophosphate concentrations in the influent (Inf), first reactor (R1) and effluent (Eff)..... F - 43
F-65.	Time series of sixth experiment total phosphorus concentrations in (Inf), first reactor (R1) and effluent (Eff)..... F - 44
F-66.	Time series of sixth experiment COD in the influent (Inf), first reactor (R1) and the effluent (Eff)..... F - 44
F-67.	Time series of sixth experiment alkalinity in the influent (Inf), first reactor (R1) and effluent (Eff)..... F - 45
F-68.	Time series of sixth experiment soluble iron in the influent (Inf), first reactor (R1) and effluent (Eff)..... F - 45
F-69.	Time series of sixth experiment soluble manganese in the influent (Inf), first reactor (R1) and effluent (Eff)..... F - 46

Figure		Page
F-70.	Time series of seventh experiment manually (Manually) and automatically (Automatically) recorded E_h in the water column. The E_h was not corrected to E_7 because the.....	F - 48
F-71.	Time series of seventh experiment E_7 in the water column (Water) and surface sediment (Sediment) and the seventh	F - 48
F-72.	Time series of seventh experiment nitrate (NO_3^- -N), ammonia (NH_3 -N), and total Kjeldahl nitrogen (TKN).....	F - 49
F-73.	Time series of seventh experiment orthophosphate (OP) and total phosphorus (TP) concentrations.....	F - 49
F-74.	Time series of seventh experiment soluble iron (Fe) and manganese (Mn)...	F - 50
F-75.	Time series of seventh experiment alkalinity (Alk) and chemical oxygen demand (COD).....	F - 50
F-76.	Profile of sediment percent volatile solids along the Occoquan Reservoir from tail waters on the Bull Run arm to Station RE15.....	F - 52
F-77.	Profile of sediment percent total solids along the Occoquan Reservoir from tail waters on the Bull Run arm to Station RE15.....	F - 52
F-78.	Profile of sediment pH along the Occoquan Reservoir from tail waters on the Bull Run arm to Station RE15.....	F - 53
F-79.	Profile of sediment reactive iron content along the Occoquan Reservoir from tail waters on the Bull Run arm to Station RE15.....	F - 53
F-80.	Profile of sediment reactive manganese content along the Occoquan Reservoir from tail waters on the Bull Run arm to Station RE15.....	F - 54
G-1.	Comparison between platinum electrodes before and after cleaning.....	G - 3
