

LIST OF TABLES

Table	Page
2-1. Reduction and Oxidation Reactions that May Be Combined to Result in Biologically Mediated Exergonic Processes at pH = 7 (taken from Stumm and Morgan, 1996).....	2 - 13
2-2. Potentials of Reference Electrodes ^a (taken from Stumm and Morgan, 1996).....	2 - 26
2-3. Comparison of Gold and Platinum Electrodes (taken from Galster, 2000).....	2 - 29
2-4. Standard Potentials [V] of different platinum oxides (taken from Galster, 2000).....	2 - 30
2-5. Selected Important Half Reactions in a Groundwater System.....	2- 36
2-6. Denitrification Rates Observed in Natural Aquatic Systems.....	2 - 42
3-1. Components of the New Reactor Design.....	3 - 5
3-2. Descriptions of Electrodes and Glass Tubes Insertion Points on the Cover of the New Reactor.....	3 - 8
3-3. Sample Volumes Taken in The First Experiment.....	3 - 12
3-4. Sample Volumes Taken in the Sixth Experiment.....	3 - 21
D-1. Summary of Characteristics of the Reservoir from the Tail Waters of the Bull Run Arm to a Point above RE15.....	D - 2
D-2. Summary of Reservoir Characteristics from the Tail Waters on the Bull Run Arm to the Dam.....	D - 3
D-3. Sixth Run Reactor Configurations (designed with the total effective depth).....	D - 6
D-4. Sixth Run Reactor Configurations (designed with the weighted average effective depth).....	D - 6
D-5. The Sediment Mixing Ratio of the Six-Run First Reactor.....	D - 7
G-1. Test of Platinum Electrodes with ZoBell's Solution and Deionized Water...	G - 3
