Acknowledgements

I wish to thank and acknowledge the faculty of the Department of Agricultural and Applied Economics for providing me with the fundamental knowledge base, skills, and funding to complete this work. Specifically, I thank Leon Geyer for giving me, through his courses and personal discussions, the desire and intellectual curiosity to seek further education in the social sciences. Especially, I thank Dr. Geyer for his assistance, along with that of Darrell Bosch, in entering the graduate program in this department and for believing that I was capable of excelling in this field, both as a student and as a professional.

I thank Dan Taylor, Leonard Shabman, and George Norton for creating courses that are exceptional in providing students of this discipline the breadth and scope of knowledge necessary to practice as professional agricultural economists. I wish to thank Brad Mills and Eluned Jones for guidance and perspective that gave me the ability to complete this work. I appreciate guidance provided by David Lamie in the early stages of this thesis, and Alex White for his contribution in its later stages. I thank Joseph Ogrodowczek and Cameron Speir for their academic assistance, friendship and intellectual camaraderie in this graduate program.

I am greatly indebted to Linda Arnold for her insightful guidance, assistance and influence in my academic career. Finally, I thank my parents for the encouragement, guidance, and motivation to seek out higher education and the freedom to find my own place in it.
Table of Contents

Abstract ................................................................................................................................. II
Acknowledgements ........................................................................................................... IV
List of Figures ..................................................................................................................... V
List of Appendices ............................................................................................................. V

Chapter 1 Introduction
1.1 The impetus for this research ...................................................................................... 1

Chapter 2 Literature Review
2.1 Conservation easements: a definition ......................................................................... 7
2.2 The donation procedure ............................................................................................. 11
2.3 Land preservation advocacy groups .......................................................................... 13
2.4 Previous analyses of the economics of conservation easement donation .................. 15
2.5 Implications of conservation easements on income and estate taxation .................... 16
2.6 Deriving the Investment Potentials ............................................................................ 17

Chapter 3 The Model
3.1 An analysis of the land trust model ........................................................................... 30
3.2 A revised landowner motivation model ..................................................................... 36
3.3 Examples and graphical representation of the model ................................................. 39
3.4 Implications of the model for development right purchase ........................................ 47
3.5 Capturing complete economic benefit from the donation ........................................... 48
3.6 The decision map ....................................................................................................... 50
3.7 Implications for Governmental and Land Trust Organizations ................................... 51
3.8 The spreadsheet program ......................................................................................... 55

Chapter 4 Conclusions and discussion ............................................................................ 71
