

Table of Contents

1	Introduction.....	1
2	Fractionally Spaced Blind Equalization.....	5
2.1	Fractionally Spaced Equalizer.....	6
2.1.1	Multi-Channel Model.....	6
2.1.2	Transfer Function and Condition for Perfect Equalization (Constraint on the Channel).....	11
2.1.3	Requirement for Perfect Source Recovery (Constraint on the Equalizer Length).....	13
2.2	Blind Adaptive Algorithm: CMA.....	15
2.3	Effect of Initialization on a Blind Equalizer.....	18
2.3.1	Conditions for Convergence to Global Minima.....	21
2.4	Conventional Blind Equalizer.....	24
3	Error Equations for Blind Equalization Schemes.....	25
3.1	Error Signals.....	26
3.2	Weight Update Equations.....	29
3.2.1	Type1.....	30
3.2.2	Type2.....	31
3.2.3	Type3.....	31
3.2.4	Type4.....	32
3.3	Simulation Results.....	34
3.3.1	Minimum Phase Channel with Two Impulses.....	35
3.3.2	Exponentially Decaying Channel.....	37
3.3.3	Symmetric Channel.....	39
3.4	Effect of Adaptation Step Size.....	40
3.5	Effect of Symmetry About Zero Error.....	42

3.6	Effect of Initialization	44
4	Recursive Linear Predictor	51
4.1	One Step Ahead Predictor	51
4.2	Recursive Method for Changing the Predictor Coefficients.....	53
4.3	Prediction of the Fading Envelope.....	57
4.3.1	Non-Stationary Rayleigh Fading Envelope Simulator	58
4.3.2	Simulation Results.....	62
4.3.2.1	Fading Envelope with Constant Velocity	63
4.3.2.2	Fading Envelope with Constant Acceleration.....	67
5	Proposed System.....	70
5.1	Equalizer Update Equations	72
5.2	Convergence Rate of FSBEEP.....	76
5.3	Modification of Proposed FSBEEP System	78
5.4	Performance of FSBEEP in the Presence of External Noise.....	81
5.5	Equalizing Non-Minimum Phase Channels.....	82
5.6	Tracking Property of the FSBEEP System	85
5.6.1	Linear Change from Minimum to Maximum Phase Channel.....	86
5.6.2	Linear Change from Maximum to Minimum Phase Channel.....	87
6	Conclusion and Suggestions for Future Works.....	89
	Appendix A	91
	Appendix B	94
	References.....	98
	Vita.....	100
