List of Figures

Figure 2.1  (a) Geometry of helical antenna; (b) Unrolled turn of helical antenna........ 6
Figure 2.2  Instantaneous charge distribution for transmission modes: (a) The lowest-order mode \( T_0 \); (b) The second-order mode \( T_1 \) .................................................. 6
Figure 2.3  Radiation patterns of helix: (a) Normal mode; (b) Axial mode .......... 8
Figure 2.4  Approximating the geometry of normal-mode helix ......................... 12
Figure 2.5  Measured current distribution on axial-mode helix [5] ......................... 12
Figure 2.6  Gain of helix for different lengths as function of normalized circumference \( C_\lambda \)[9] ........................................................................ 17
Figure 2.7  Peak gain of various diameter as \( D \) and \( \alpha \) varied (circles), \( D \) fixed and \( \alpha \) varied (triangle) [8]. ................................................................ 17
Figure 2.8  Gain versus frequency of 30.8-inch length and 4.3-inch diameter helix for different pitch angles [8]................................................................. 19
Figure 2.9  Gain versus frequency for 5 to 35-turn helical antennas with 4.23-inch diameter [8] ..................................................................................... 20
Figure 2.10 Radiation patterns for various helical turns of helices with \( \alpha = 12^\circ \) and \( C = 10 cm. \) at 3 GHz [12] ................................................................. 20
Figure 2.11 Tapered helical antenna configuration.[11]. ........................................ 23
Figure 2.12 \( \frac{1}{2} \) turn half-wavelength printed resonant quadrifilar helix [14]. ......... 24
Figure 2.13 Stub-loaded helix configuration [15].................................................... 25
Figure 2.14 Monopole-helix antenna [16]............................................................. 25
Figure 3.1  Geometry of spherical helix: (a) Fully wound 10-turn helix, (b) Truncated 7-turn helix ................................................................................ 27
Figure 3.2  Hemispherical helical antenna with 4.5 turns ................................. 30
Figure 4.1  Computed radiation patterns, (------) $G_\theta$ and (--------------) $G_\phi$, for truncated spherical helices with $C = 1.25\lambda$, $N = 10$, and actual number of turns (a) $n = 9$, (b) $n = 7$, (c) $n = 5$, and (d) $n = 3$. .......................... 38

Figure 4.2  Variations of phase difference between $\theta$ and $\phi$ components of electric field versus theta for several values of $n$ .......................... 39

Figure 4.3  Variations of axial ratio in the $\theta = 0^\circ$ direction versus actual number of turns for truncated spherical helices with $C = 1.25\lambda$ and $N = 10$. .......................... 40

Figure 4.4  Variations of directivity versus actual number of turns for truncated spherical helices with $C = 1.25\lambda$ and $N = 10$. .......................... 40

Figure 4.5  Variations of axial ratio in the $\theta = 0^\circ$ direction versus actual number of turns for spherical helices with $C = 1.25\lambda$ and (a) $N = 7$, (b) $N = 4$ .......................... 41

Figure 4.6  Variations of directivity versus actual number of turns for spherical helices with $C = 1.25\lambda$ and (a) $N = 7$, (b) $N = 4$ .......................... 42

Figure 4.7  Geometry of double spherical helix. The lower sphere has 7 turns, while the upper one has 4 turns .......................... 44

Figure 4.8  Comparison of computed directivities of the spherical and double spherical helices. Both helices have a radius of 0.0254 m. .......................... 44

Figure 4.9  Calculated radiation patterns of double spherical helix at $f = 1.88$ GHz .......................... 45

Figure 4.10  Calculated axial ratio of double spherical helix at $f = 1.88$ GHz .......................... 45

Figure 4.11  Calculated axial ratio versus frequency for double spherical helix with a diameter of 0.0508 m. .......................... 46

Figure 4.12  Comparison of directivity versus frequency for various hemispherical helices .......................... 48

Figure 4.13  Comparison of axial ratio in $\theta = 0^\circ$ direction versus frequency for various hemispherical helices .......................... 48

Figure 4.14  Input impedance versus frequency for 3-turn hemispherical helix with a diameter of 0.04 m. .......................... 50

Figure 4.15  Input impedance versus frequency for 4.5-turn hemispherical helix with a diameter of 0.04 m. .......................... 50
Figure 4.16 Input impedance versus frequency for 7-turn hemispherical helix with a diameter of 0.04 m. ................................................................. 51

Figure 4.17 Input impedance versus frequency for 9-turn hemispherical helix with a diameter of 0.04 m. ................................................................. 51

Figure 4.18 Far-field patterns at $f = 2.84$ GHz for a 4.5-turn hemispherical helix with a diameter of 0.04 m mounted over 10x10 cm$^2$ ground plane. ................. 52

Figure 4.19 Axial ratio versus frequency for 4.5-turn hemispherical helix with a diameter of 0.04 m. ................................................................. 54

Figure 4.20 Computed radiation patterns, (-----) $G_\theta$ and (-----) $G_\phi$, for 4.5-turn hemispherical helices with normalized circumference of $1.19\lambda$, (a) $f = 2.84$ GHz, (b) $f = 5.0$ GHz, (c) $f = 7.0$ GHz, and (d) $f = 9.0$ GHz. ........................................................................................................ 55

Figure 4.21 Axial ratios for 4.5-turn hemispherical helices with normalized circumference of $1.19\lambda$, (a) $f = 2.84$ GHz, (b) $f = 5.0$ GHz, (c) $f = 7.0$ GHz, and (d) $f = 9.0$ GHz................................................................. 56

Figure 5.1 (a) Computed and (b) measured radiation patterns for the double spherical helix at $f = 1.85$ GHz................................................................. 60

Figure 5.2 (a) Computed and (b) measured far-field patterns for the hemispherical helix at $f = 2.8$ GHz. ................................................................. 61

Figure 5.3 Computed axial ratio from measured pattern data for the 4.5-turn hemispherical helix. ................................................................. 63
