

## List of Figures

Figure	Page
2.1. Peak ground acceleration map used by the AASHTO Specifications .....	3
2.2. 0.2-second spectral acceleration map with 2% probability of exceedance in 50 years .....	4
2.3. 1.0-second spectral acceleration map with 2% probability of exceedance in 50 years .....	5
2.4. Response spectrum curve in the current AASHTO Specifications .....	5
2.5. Response spectrum curve in the new LRFD Guidelines .....	6
2.6. Comparison between the response spectrum curves using the old AASHTO Specifications and the new LRFD Guidelines for the Richmond area .....	9
2.7. Comparison between the response spectrum curves using the old AASHTO Specifications and the new LRFD Guidelines for the Bristol area .....	10
3.1. Actual cross section of the prestressed concrete girder bridge superstructure.....	15
3.2. Simplified cross section of the prestressed concrete girder bridge superstructure .....	16
3.3. Pier elevation of the prestressed concrete girder bridge .....	17
3.4. Actual pier cap beam cross section of the prestressed concrete girder bridge ....	18
3.5. Column cross section of the prestressed concrete girder bridge .....	18
3.6. RISA 3D model of the prestressed concrete girder bridge .....	21
3.7. Embedment of the prestressed concrete girders on the backwall .....	21
3.8. Section of the continuity diaphragm used between the prestressed concrete girders .....	22
3.9. Plan view of the continuity diaphragm used to connect the prestressed concrete girders .....	23
3.10. Loading on the pier performed to determine more accurate dead load effects on the pier cap beam and columns.....	24

3.11.	Three moving live load cases and the lane load .....	25
3.12.	Relationship between axial load P on the column and its effective moment of inertia $I_e$ .....	32
3.13.	Uniform lateral loading on the prestressed concrete girder bridge .....	35
3.14.	Design response spectrum curve in the new LRFD Specifications .....	37
3.15.	Design response spectrum curve for the prestressed concrete girder bridge .....	39
3.16.	Equivalent earthquake loading using the single mode spectral analysis method on the prestressed concrete girder bridge .....	41
3.17.	Interaction diagram for the columns of the prestressed concrete girder bridge ...	43
3.18.	Simplified cross section of the pier cap beam of the prestressed concrete girder bridge .....	44
4.1.	Actual cross section of the West Bound steel girder bridge superstructure .....	50
4.2.	Actual cross section of the East Bound steel girder bridge superstructure .....	51
4.3.	Simplified cross section of the West Bound steel girder bridge superstructure ...	52
4.4.	Simplified cross section of the East Bound steel girder bridge superstructure ...	52
4.5.	Pier elevation of the West Bound steel girder bridge .....	54
4.6.	Pier elevation of the East Bound steel girder bridge .....	55
4.7.	RISA 3D model of the West Bound and East Bound steel girder bridges .....	56
4.8.	Fixed supports at the ends of the superstructure of the steel girder bridges .....	57
4.9.	Elevations of the West Bound and East Bound steel girders .....	58
4.10.	Loading on the pier performed to get more accurate dead load effects on the pier cap beam and columns of the steel girder bridges .....	59
4.11.	Three moving live load cases and the lane load .....	60
4.12.	Uniform lateral loading on the steel girder bridges .....	66
4.13.	Design response spectrum curve for the steel girder bridges .....	69
4.14.	Equivalent earthquake loading using the single mode spectral analysis method on the West Bound steel girder bridge .....	71
4.15.	Equivalent earthquake loading using the single mode spectral analysis method on the East Bound steel girder bridge .....	72
4.16.	Interaction diagram of the West Bound steel girder bridge columns .....	74

4.17.	Interaction diagram of the East Bound steel girder bridge columns .....	74
4.18.	Actual cross section of the West Bound steel girder bridge pier cap beam .....	75
4.19.	Actual cross section of the East Bound steel girder bridge pier cap beam .....	75
4.20.	Simplified cross section of the West Bound steel girder bridge pier cap beam ...	76
4.21.	Simplified cross section of the East Bound steel girder bridge pier cap beam .....	76
5.1.	RISA 3D model of the bridge used in the parametric study .....	81
5.2.	Substructure of the bridge used in the parametric study .....	83
5.3.	Loading on the substructure to get the stiffness in the transverse direction for the parametric study .....	84
5.4.	Loading to the substructure, modeled as a cantilever column, to get the stiffness in the longitudinal direction for the parametric study .....	85
5.5.	Loading to obtain the period of vibration of the bridge in the transverse direction for the parametric study .....	86
5.6.	Design response spectrum curve for Vienna, VA .....	89
5.7.	Design response spectrum curve for Richmond, VA .....	90
5.8.	Design response spectrum curve for Bristol, VA .....	90
5.9.	Comparison between the column interaction diagram and the axial loads and moments of the columns for Vienna, VA .....	93
5.10.	Comparison between the column interaction diagram and the axial loads and moments of the columns for Richmond, VA .....	93
5.11.	Comparison between the column interaction diagram and the axial loads and moments of the columns for Bristol, VA .....	94
II-1.	Actual cross section of the prestressed concrete bridge superstructure .....	101
II-2.	Simplified cross section of the prestressed concrete bridge superstructure .....	102
II-3.	Cross section of the prestressed concrete girders .....	103
II-4.	Actual cross section of the pier cap beam of the prestressed concrete girder bridge .....	105
II-5.	Simplified cross section of the pier cap beam of the prestressed concrete girder bridge .....	106

II-6.	Cross section of the columns of the prestressed concrete girder bridge .....	107
III-1.	RISA 3D model of the prestressed concrete girder bridge .....	108
V-1.	Actual cross section of the pier cap beam of the prestressed concrete girder bridge .....	111
V-2.	Simplified cross section of the pier cap beam of the prestressed concrete girder bridge .....	112
IX-1.	Cross section of the columns of the prestressed concrete girder bridge .....	121
IX-2.	Column interaction diagram for the prestressed concrete girder bridge .....	126
X-1.	Actual cross section of the pier cap beam of the prestressed concrete girder bridge .....	127
X-2.	Simplified cross section of the pier cap beam of the prestressed concrete girder bridge .....	127
XIII-1.	Actual cross section of the parapet of the steel girder bridge .....	142
XIII-2.	Simplified cross section of the parapet of the steel girder bridge .....	142
XIII-3.	Simplified cross section of the West Bound plate girders .....	144
XIII-4.	Actual cross section of the West Bound superstructure of the steel girder bridge .....	145
XIII-5.	Simplified cross section of the West Bound superstructure of the steel girder bridge .....	146
XIII-6.	Simplified cross section of the East Bound plate girder .....	148
XIII-7.	Actual cross section of the East Bound superstructure of the steel girder bridge .....	150
XIII-8.	Simplified cross section of the East Bound superstructure of the steel girder bridge .....	151
XIII-9.	Actual cross section of the pier cap beam of the West Bound steel girder bridge .....	153
XIII-10.	Simplified cross section of the pier cap beam of the West Bound steel girder bridge .....	153
XIII-11.	Actual cross section of the pier cap beam of the East Bound steel girder bridge .....	154

XIII-12. Simplified cross section of the pier cap beam of the East Bound steel girder bridge .....	154
XIII-13. Cross section of the columns of the West Bound steel girder bridge .....	155
XIII-14. Cross section of the columns of the East Bound steel girder bridge .....	155
XIV-1. RISA 3D model of the steel girder bridge .....	156
XVI-1. Actual cross section of the pier cap beam of the West Bound steel girder bridge .....	160
XVI-2. Simplified cross section of the pier cap beam of the West Bound steel girder bridge .....	160
XVI-3. Actual cross section of the pier cap beam of the East Bound steel girder bridge .....	165
XVI-4. Simplified cross section of the pier cap beam of the East Bound steel girder bridge .....	166
XX-1. Cross section of the West Bound steel girder bridge columns .....	176
XX-2. Column interaction diagram for the West Bound steel girder bridge columns ..	182
XX-3. Cross section of the East Bound steel girder bridge columns .....	182
XX-4. Column interaction diagram for the West Bound steel girder bridge columns ..	189
XXI-1. Actual cross section of the pier cap beam of the West Bound steel girder bridge .....	190
XXI-2. Simplified cross section of the pier cap beam of the West Bound steel girder bridge .....	190
XXI-3. Actual cross section of the pier cap beam of the East Bound steel girder bridge .....	193
XXI-4. Simplified cross section of the pier cap beam of the East Bound steel girder bridge .....	193
XXII-1. Lap splices used at the bottom of the columns of the West Bound bridge .....	202
XXII-2. Lap splices used at the bottom of the columns of the East Bound bridge .....	209
XXIII-1. Design response spectrum curve for Vienna, VA .....	246
XXIII-2. Design response spectrum curve for Richmond, VA .....	247
XXIII-3. Design response spectrum curve for Bristol, VA .....	248

XXIII-4. Comparison between the column interaction diagram and the axial loads and moments of the column for Vienna, VA .....255

XXIII-5. Comparison between the column interaction diagram and the axial loads and moments of the column for Richmond, VA .....255

XXIII-6. Comparison between the column interaction diagram and the axial loads and moments of the column for Bristol, VA .....256

XXIII-7. Interaction diagram for the columns with 1.5% reinforcement ratio for the parametric study .....261

XXIII-8. Interaction diagram for the columns with 2.0% reinforcement ratio for the parametric study .....266
