

**PERFORMANCE EVALUATION AND YIELD
DETERMINATION OF A FULL-SCALE
BIOLOGICAL AERATED FILTER**

Scott D. Phipps

Thesis submitted to the Faculty of the
Virginia Polytechnic Institute and State University
In Partial fulfillment of the requirements for the degree of

Master of Science
In
Environmental Engineering

Nancy G. Love, Chair
Mark A. Edwards
John T. Novak

March 16, 2001
Blacksburg, Virginia

Keywords: Biological Aerated Filter, Yield,
Particle Hydrolysis, Biochemical Oxygen Demand

ACKNOWLEDGEMENT

The author would like to acknowledge and thank the following people for their contributions and support during this research project. The author would like to recognize Infilco Degremont, Inc. and Edna Bailey Sussman Foundation for partial funding of this research project. The author would like to thank the Roanoke Water Pollution Control Facility and their personnel for their cooperation, specifically Scott Shirley, Barry Montgomery, and Carson Kelly. The author would like to thank Dr. Nancy Love for her guidance throughout this project and during required academic course work. Additionally, Dr. Mark Edwards and Dr. John Novak for their contributions and service as graduate research committee members. Julie Petruska and Jody Smiley for their assistance and support during laboratory work and sample analysis. Charles Bott for his research knowledge and laboratory contributions to this research project. Stephen Cox and Stephen Carpenter for their personal support of the author. The author would like to thank the author's family whose encouragement provided the necessary support to complete this research project. Additionally, the author would like to acknowledge the many friends who provided contributions and support. Special thanks to Carrie Adam for her patience, understanding, and support.
