

Acknowledgements

My sincere appreciation goes to my academic advisor, Dr. Theodore. S. Rappaport for his professional guidance and advice throughout my tenure in Virginia Tech. He has vastly improved my engineering and technical writing skills. I am grateful to my committee members Dr. Lynn Abbot and Dr. Brian Woerner for their helpful comments and suggestions.

I would like to thank Jason Aaron and Ramesh Chembil Palat for reviewing my chapters and offering valuable suggestions. I owe it to them for improving my manuscript into a thesis. I wish to extend my gratitude to Chris Anderson, Shakeela Marikkar and Vikas Kukshya for comments and suggestions.

My association with MPRG for the past one and a half years has been a positive and an enriching experience. I am grateful towards all my fellow researchers and the staff of MPRG for making my stay at Virginia Tech a memorable one. I would like to thank all my friends and housemates for being understanding and supportive during my stay at Tech.

This research was sponsored by the National Science Foundation (NSF). Without their support this research would not have been possible. Part of this work was done while I was interning at Wireless Valley Communications. I am grateful towards all the employees of Wireless Valley Communications for their support.

I saved the most important acknowledgments for last. I wish to extend my special thanks to my parents and my brother for their constant support and encouragement throughout my life.
