

Fig. 8. Recovery of *Pythium* spp. from rhododendron leaf bait disks placed on the surface of the irrigation reservoir. Leaf disks were plated on two different media--P₅ARP+B and P₅ARP+B+H. Each point represents the mean of three replicate assays. Error bars represent ± 1 standard deviation. The mean percentage of leaf disks colonized was significantly higher for leaf disks plated on P₅ARP+B medium compared to leaf disks plated on P₅ARP+B+H medium ($P \leq 0.05$).
