

Fig. 16. Mortality of *Salvia officinalis* (sage) after inoculation with different isolates of *P. citrophthora* at concentration of 10,000 zoospores/plant. *P. cactorum* (65) was used as a positive control; negative controls were inoculated with soil extract. Bars with the same letter are not significantly different according to Fisher's exact test ($P \leq 0.05$).
