

## **ACKNOWLEDGEMENT**

First and foremost, I would like to thank my thesis advisor, Dr. A. Lynn Abbott, for his invaluable guidance and patience throughout my entire study at Virginia Tech. Beyond gaining academic knowledge, I am also indebted to him for his examples in life.

I would like to thank my friends in Blacksburg, Virginia and in Boulder, Colorado for their warmhearted friendship throughout my life in the United States. First special thanks go to Somkiat Appipattanavis, Dr. Chalor Jarusukthiruk and Kenichiro Shimada for the good memories and second special thanks go to Anbu Subramanian and Erol Sarigul, who were always quick to help and provide information. I also will never forget Jay, Michele and Ellen Lester for our weekly meetings and studies.

I cannot thank my father and mother enough for their love and support. Thanks also go to my brothers, sisters and sister-in-law for their encouragement. I also would like to thank my special aunt, Vichulada Leerujikul, who has been advising and guiding me through my high school and college study years.

# TABLE OF CONTENTS

## Chapter 1

<b>Introduction.....</b>	<b>1</b>
1.1 Motivation.....	1
1.2 Approach.....	3
1.3 Significance of Research.....	4
1.4 Overview of Material.....	5

## Chapter 2

<b>Discrete Wavelet Transform.....</b>	<b>7</b>
2.1 Fourier Transform.....	7
2.2 Wavelet Transform.....	9
2.2.1 Separability Property.....	10
2.2.2 Multiresolution Analysis.....	11
2.2.3 Signal Decomposition.....	13
2.2.4 Requirements for Multiresolution.....	15
2.2.5 Choice of Wavelet.....	18

## Chapter 3

<b>Background and Related Work.....</b>	<b>22</b>
3.1 Input and Output Data .....	22
3.1.1 Gray-Scale Image.....	22
3.1.2 Triangulation.....	23
3.2 Delaunay and Data-Dependent Triangulations.....	24
3.3 Gouraud Shading.....	28
3.4 Error Metric.....	31
3.5 Graph Theory.....	32

## Chapter 4

<b>Wavelet-Based Initial Triangulation.....</b>	<b>36</b>
4.1 Overview of the Initial Triangulation.....	36
4.2 Basic and Variant Templates.....	37
4.3 SML Initial Triangulation.....	37
4.4 Vertex Compatibility and Variant Templates.....	41
4.5 Complete Set.....	43

## Chapter 5

<b>Local Operators.....</b>	<b>46</b>
5.1 High-Level Algorithm.....	46
5.1.1 SML High-Level Algorithm.....	46
5.1.2 New Approach.....	48
5.2 Region Selection.....	49
5.2.1 Candidate Selection.....	50
5.2.2 Neighborhood Assignment.....	52
5.3 Mesh Simplification.....	54
5.3.1 Vertex Removal Operation.....	54
5.3.2 Edge Collapse Operation.....	56
5.4 Image Enhancement.....	61
5.4.1 Edge Swap Operation.....	61
5.4.2 Wavelet Coefficient Attraction Operation.....	63
5.4.3 Shape-Preserving Split Operation.....	65

## Chapter 6

<b>Result and Performance Analysis.....</b>	<b>68</b>
6.1 Memory Requirement and Time Complexity.....	68
6.1.1 Overview.....	68
6.1.2 Memory Requirement.....	69
6.1.3 Time Complexity.....	70
6.2 Test Image.....	73

6.3	Results.....	74
6.3.1	Mesh Regularity Comparison.....	76
6.3.2	Level-of-Detail (LOD) Result.....	78
6.3.3	Time Complexity Result.....	81
6.3.4	Mesh Reduction Result.....	82
6.3.5	Multiresolution Mesh Generation.....	84
6.4	Applications.....	103
6.4.1	Region-of-Interest (ROI) Refinement.....	103
6.4.2	Eye Detection.....	106
6.4.3	Segmentation.....	109

## **Chapter 7**

<b>Conclusion and Future Work.....</b>	<b>111</b>
7.1 Summary and Conclusion.....	111
7.2 Future Works.....	113

<b>Bibliography.....</b>	<b>114</b>
--------------------------	------------

## **Appendix I**

<b>Data Structure.....</b>	<b>117</b>
----------------------------	------------

## LIST OF FIGURES

Figure 1.1	Approximation using triangulation at different resolution levels .....	2
Figure 1.2	Segmentation of the peppers image.....	3
Figure 1.3	Example of eye detection.....	3
Figure 2.1	Example of Fourier transforms of two-dimensional signals.....	8
Figure 2.2	Separability property of the wavelet transform.....	11
Figure 2.3	Discrete wavelet transform at different levels.....	13
Figure 2.4	Filter banks used for decomposition and reconstruction.....	14
Figure 2.5	Discrete wavelet signals.....	15
Figure 2.6	Space and subspaces represented in multiresolution.....	17
Figure 2.7	Approximations at different levels.....	17
Figure 2.8	Magnitude response and its absolute magnitude response .....	19
Figure 2.9	Shifting comparison between orthogonal and biorthogonal wavelets.....	20
Figure 3.1	Regular sample grid.....	25
Figure 3.2	Approximation of an image using regularly sampled triangular mesh.....	25
Figure 3.3	Example of a Voronoi diagram and its Delaunay triangulation.....	26
Figure 3.4	Concept of Delaunay triangulation.....	27
Figure 3.5	Comparison of Delaunay triangulation and non-Delaunay triangulation.....	28
Figure 3.6	Gouraud shading.....	30
Figure 3.7	Mach band phenomenon .....	31
Figure 3.8	Error calculation for the Gouraud shading reconstructed image .....	33
Figure 3.9	General and simple planar graphs .....	33
Figure 3.10	Equivalent graph.....	34
Figure 4.1	Construction of basic templates.....	38
Figure 4.2	Nine fundamental forms for variant construction.....	38
Figure 4.3	Wavelet coefficients for initial triangulation and its comparison .....	39
Figure 4.4	Dual templates.....	39
Figure 4.5	Demonstration for the directionality property for the discontinuity.....	40
Figure 4.6	Directionality and slope of discontinuity.....	41
Figure 4.7	Basic template assignment.....	41
Figure 4.8	Vertex incompatibility.....	42

Figure 4.9	Neighbor checking for vertex compatibility.....	43
Figure 4.10	Solution to vertex incompatibility.....	43
Figure 4.11	Example of final initial triangulation.....	44
Figure 4.12	Complete set of the templates and their generating isomorphism functions.....	45
Figure 5.1	Flow diagram of SML algorithm .....	48
Figure 5.2	Flow diagram of the new algorithm.....	50
Figure 5.3	Neighborhood assignment .....	53
Figure 5.4	Triangle subdivision.....	53
Figure 5.5	Gauss mapping.....	55
Figure 5.6	Biased Gauss mapping and autocorrelation representation .....	55
Figure 5.7	Edge collapse example.....	57
Figure 5.8	Top view of an edge collapse operation.....	57
Figure 5.9	Undesirable condition for edge collapse.....	58
Figure 5.10	Undesirable result of edge collapse.....	58
Figure 5.11	Short edge collapse.....	59
Figure 5.12	Triangulation violation caused by edge collapse.....	59
Figure 5.13	Effect of edge collapse on convex polygon.....	60
Figure 5.14	Effect of edge collapse on concave polygon.....	60
Figure 5.15	Delaunay triangulation decision.....	62
Figure 5.16	Error-based edge swap.....	62
Figure 5.17	Limitation of edge swap.....	64
Figure 5.18	Wavelet coefficient attraction.....	64
Figure 5.19	Templates for wavelet coefficient attraction.....	64
Figure 5.20	Triangular mesh violation after vertex translation.....	65
Figure 5.21	Triangle split.....	67
Figure 5.22	Directional split based on wavelet coefficient .....	67
Figure 6.1	Test Images.....	75
Figure 6.2	PSNR comparison on the Lena and peppers images at different values of mesh regularity factor, $\alpha$ .....	77
Figure 6.3	The number of triangles needed to represent the Lena and peppers images at different values of $\alpha$ .....	77
Figure 6.4	Processing times of the Lena and peppers images at different values of the mesh regularity factor, $\alpha$ .....	77

Figure 6.5	Reconstructed image comparison on pepper image .....	78
Figure 6.6	Level-of-detail (LOD) analysis on PSNR comparison at different values of $\omega_{\max}$ .....	79
Figure 6.7	Level-of-detail (LOD) analysis on the number of triangles comparison at different values of $\omega_{\max}$ .....	80
Figure 6.8	Elaine results from level-of-detail experiment.....	80
Figure 6.9	Element multiplication from the Lena image.....	81
Figure 6.10	Time comparison based on the number of triangles.....	82
Figure 6.11	Comparison of the number of triangles at different vertex removal threshold, $\delta_v$ .....	83
Figure 6.12	Comparison of PSNR on Lena and Elaine images at different vertex removal threshold, $\delta_v$ , from 0.00 to 0.15.....	83
Figure 6.13	Reconstructed Image of Lena.....	85
Figure 6.14	Reconstructed Image of Peppers.....	89
Figure 6.15	Reconstructed Image of Mandrill.....	91
Figure 6.16	Reconstructed image of Elaine.....	93
Figure 6.17	Reconstructed Image of Moon.....	95
Figure 6.18	Reconstructed Image of Goldhill.....	97
Figure 6.19	Discrete wavelet transform results.....	99
Figure 6.20	PSNR comparison on all images at different levels.....	101
Figure 6.21	Number of triangles comparison on all images at different levels.....	101
Figure 6.22	Histogram of the test images.....	102
Figure 6.23	Masking for the Lena and pepper images.....	103
Figure 6.24	Triangulation refinement based on masking shown in Figure 6.23.....	104
Figure 6.25	Triangulation refinement of two different peppers.....	105
Figure 6.26	Diagram of eye detection algorithm using triangular mesh representation as input .....	106
Figure 6.27	Results of eye detection on the Lena and Elaine image after relational screening.....	107
Figure 6.28	Comparison of the eye templates.....	108
Figure 6.29	Results of the eye detection.....	108
Figure 6.30	Segmentation of peppers image.....	109
Figure A1	Data structure of the triangular mesh .....	118
Figure A2	Hierarchical ring data structure.....	119
Figure A3	Half-edge data structure .....	119

## LIST OF TABLES

Table 6.1	Memory requirements for the vertex, loop, half-edge and face linked-lists, wavelet coefficients and input image of the algorithm.....	70
Table 6.2	Time complexity of the triangle selection, edge swap, edge collapse, vertex removal and triangle split operations used by the algorithm.....	73
Table 6.3	Statistics information of the test images.....	74
Table 6.4	Vertex removal comparison as a function of vertex removal threshold, $\delta_v$ .....	84
Table 6.5	Results obtained from Lena image from level 6 to -2.....	85
Table 6.6	Results obtained from pepper image from level 6 to -2.....	87
Table 6.7	Results obtained from Mandrill image from level 6 to -2.....	87
Table 6.8	Results obtained from Elaine image from level 6 to -2.....	88
Table 6.9	Results obtained from moon image from level 6 to -2.....	88
Table 6.10	Results obtained from Goldhill image from level 6 to -2.....	88
