

## ACKNOWLEDGEMENTS

Each of the following individuals has provided me with support, advice, and encouragement throughout the process of developing this thesis. It is with sincere gratitude and appreciation that I thank you all for everything you have done to assist me in the most ambitious endeavor of my career thus far.

Thanks to my advisor Eileen Crist. You understood my interests and passions exactly, in part because you share them. From our very first meeting at Bollo's prior to my entering the program, you encouraged me to seek what I needed from STS. I appreciate the positive way that you helped me to polish the draft over the course of the semester.

Thanks to Matthew Goodrum and Mark Barrow for agreeing to be on my committee. You offered me nothing but tactful encouragement – even when I tried to fit every topic of recent interest into one proposal! Thank you for your helpful feedback during both defenses. Mark –your environmental history class was particularly useful for my thesis goals. Class readings and discussions provided me with a crucial framework to help conceptualize my ideas while working to express them cogently.

I want to thank Laurie Spangler of Mill Mountain Zoo in Roanoke, Virginia for allowing me to conduct my research at the Zoo. You provided me with assistance, information, and access to literature pertinent to this study, and it made a huge difference.

I know that I could not have completed this project without the support of my Mom and Ray. Not only did you both offer me loads of moral support, but you watched Quinlan on so many occasions while I worked late, or did Pilates to de-stress.

I want to express gratitude to my sister Sarah Mitchell. You encouraged me and expressed confidence in my abilities when I could only do the opposite. I have learned a lot from your example, and you have given me great advice about the thesis – and everything else. Thanks for including me in the thesis/dissertation group!

I wish to thank my very unique friend Gayle Partain-Hartigan. You have offered me unlimited encouragement and have been an enthusiastic sounding board regardless of the topic. Thank you for sharing this crazy grad school journey with me. What haven't we encountered along this rocky route? I know – but please rest assured – YOU are next!

Last, but never least, I must thank my unbelievably supportive husband Eric and our daughter Quinlan Althea Mitchell Norris. Both have demonstrated rare and amazing patience throughout my lengthy working sessions over the last four years. You've been told "not right now, mommy's working" often – too often. I am honored to know you and humbled to raise you. I look forward to accompanying you along your own quest to comprehend and find your place in the world. Thank you, pretty girl, for motivating me to keep reaching for excellence. Thank you for everything that you are, and everything you will become.

This thesis is dedicated to the memory of my beloved father, Dr. James G. Mitchell. It is your shining example that I try to emulate in all that I do.

Thank you for everything.

## CHAPTERS

INTRODUCTION..... 1

I. THE PROBLEM: HUMAN-TIGER TENSION AND CONFLICT – BRAVING THE TIGER IN THE FLESH AND IN OUR MINDS.....13

The ancient tiger (*Panthera tigris tigris*) and early *Homo*

Where have all the tigers gone?

Studying the tiger: assessing the damage

Murderous amorousness leading to two hundred years of decimation

Three rapidly escalating threats: habitat loss and fragmentation; poaching; decreasing prey populations

Changing wilderness ideals, perceptions, and boundaries

Why we care: Biophilia

II. FIRST PERIOD: PERSECUTION AND CONSERVATION IN BRITISH INDIA 1800-EARLY-1900s.....55

Governing the man-eating tiger

Jim Corbett and the tiger-wallahs, a.k.a. “the wild bunch”

Shooting tigers – with a camera

Emergence of the reserve

III. SECOND PERIOD: CAPTIVE WILD early-1900s- 1970s/1980s.....73

Growing to understand the biological tiger and its ecological significance

The zoo: phases of exhibiting, knowing, and enriching the captive environment

Habitat protection versus captive breeding
