The Role of Virginia Tech in Human Capital Formation

Joydeep Ghosh

(ABSTRACT)

Virginia Tech contributes significantly to social and economic progress at the regional, state and national levels through its teaching, research and public service activities. The study is motivated by the current debate on the appropriate level of support for higher education in Virginia's largest university. This study measures the benefits of the university's undergraduate teaching mission. The results suggest that a VT undergraduate degree significantly increases the lifetime earnings of the graduates and also leads to several other benefits to the graduate, to his/her family, and to society. This study can help policy-makers to better understand the important contribution of Virginia Tech's teaching mission to society, and thus make more-informed decisions regarding the appropriate level of support for higher education.

Acknowledgements

I would like to thank Bradford Mills, my advisor, for his constant support and guidance during the program. I would also like to thank my other committee members, Jeff Alwang and Gautam Hazarika, for their assistance and input. I would like to thank Larry Hincker, Vice President, University Relations, and the Offices of Career Services and Institutional Planning and Research at Virginia Tech for providing student related data. Finally, I thank the faculty, staff and friends here for making my stay in Blacksburg educationally and culturally enriching.

Table of Contents

Chapter One: Introduction	1
1.1 The benefits of education	1
1.2 Rationale for the public support of higher education	3
1.3 Objectives	4
1.4 Methods and Data	4
1.5 Organization of the thesis	5
Chapter Two: Higher Education Trends in Virginia	6
2.1 Background	7
2.2 Educational attainment and income across the counties	7
2.3 The higher education system	8
2.4 Student enrolments	9
2.5 Enrolments by gender and race	13
2.6 Higher education and age	19
2.7 Degrees conferred	19
2.8 Educational investments	22
2.9 Conclusions	23
Chapter Three: Theoretical Model and Empirical Background	25
3.1 Background	25
3.2 The benefits of education	26
3.3 The costs of education	28
3.4 Net Present Value/Internal Rate of Return	29
3.5 The basic theoretical model of educational investment	31
3.6 The rationale for public investments in education	32
3.7 The measurement of the monetary benefits of education	32
3.8 Empirical background	37
Chapter Four: Empirical Specification and Data	40
4.1 The OLS Approach (model without the workforce participation decision correction)	41
4.2 Workforce selection model	44
4.3 Discussion of variables	48
4.4 Data and descriptive statistics	50
Chapter Five: Empirical Results	54
5.1 NPV estimates using OLS method	56
5.2 NPV estimates using the workforce selection model	65
5.3 Private rates of return	78
Chapter Six: The Non-Monetary Benefits of Higher Education	80
6.1 The non-monetary benefits of education	80
6.2 The true value of a Virginia Tech education	85

Chapter Seven: Implications and Limitations of the Study	86
7.1 Implications of the study	86
7.2 Limitations of the study and further research	89
7.3 Summary	90
References	91
Vita	95
Appendix	96
