

List of Figures

2.1	Number of cranes as a function of Loa	15
2.2	Freeboard as a function of Loa	20
3.1	Dependence of TEUs below deck on C_b indicated by slope	22
3.2	Expressing stowage factor of TEUs below deck as a function of C_b	23
3.3	Reduction of slope induced by C_b on TEUs below deck	23
3.4	The Fit for Teus below deck checked at point: $Loa = 224.84$, $B = 24$, $D = 14.5$	26
3.5	The Fit for TEUs on deck checked at point: $Loa = 222.5$, $B = 25.5$	29
4.1	Flowchart for MDO	34
5.1	Iteration history	43
5.2	Sensitivity analysis	46
5.3	Weight breakdown	48
5.4	Lightship weight breakdown	48
5.5	Breakdown of annual costs	49
5.6	Breakdown of annual building costs	49
5.7	Breakdown of annual operating costs	50
6.1	Effect of integer and continuous number of TEUs on RFR	54
8.1	Representation of design space between two optima showing non-smoothness	62
8.2	Representation of design space between two optima, non-smoothness eliminated	63
