Dear Tom,

Thank you for your recent correspondence about MIT OpenCourseWare (OCW).

Through OCW, MIT grants the right to anyone to use the materials, either "as is," or in a modified form. There is no restriction on how a user can modify the materials for the user's purpose. Materials may be edited, translated, combined with someone else's materials, reformatted, or changed in any other way.

If you choose to reuse or repost OCW materials, you must give proper attribution to the original MIT author(s). Please utilize the following citation: "This material was created by or adapted from material created by MIT faculty member, (Name), (Title), (Year). Copyright C (Year) (Faculty Member's Name)."

As an example, the citation for "Course 18.06 Linear Algebra, Spring 2005" taught by MIT Professor Gilbert Strang would read: "This material was created or adapted from material created by MIT faculty member Gilbert Strang, Professor. Copyright C 2005 Gilbert Strang."

If you want to use the materials on your Web site, you must also include a copy of the OCW Creative Commons license, or clear and reasonable link to its URL (<http://ocw.mit.edu/OcwWeb/web/terms/terms/index.htm>), with every copy of the MIT materials or the derivative work you create from it.

Sincerely,  
The MIT OpenCourseWare Team
