

ACKNOWLEDGEMENTS

I would first like to thank my mother, Terese Stockunas, without her continuous support and encouragement I never would have been able to achieve my goals. This one is for you mom!

Second, a special thank you to my fiancée, Espen Spangenburg. Words cannot describe how lucky I am to have him in my life. He has selflessly given more to me than I ever could have asked for. I love you, and look forward to our lifelong journey.

Thanks to the subjects who voluntarily participated in the study, none of this would have been possible without them. Their dedication and perseverance made for an enjoyable nine weeks.

Thank you to everyone who assisted with the study. Janet Rinehart and Kathy Reynolds were especially helpful in collecting samples and in assisting with the lab work. Dr. Michael Houston, Dr. Stuart Phillips, and Dr. Maggie Chi, provided me with valuable advice on running the enzyme assay. Finally, the numerous students who monitored exercise sessions, assisted in data collection, and provided education to the subjects allowed for the study to be completed as planned.

Thank you to Dr. Forrest Thye and Dr. Richard Winett for serving on this committee. Your dedication is greatly appreciated.

I would like to thank Roxann Polo, my research partner. Without Roxann's organization and devotion this study never would have progressed as smoothly as it did.

Lastly, thank you to Dr. Rankin for giving me the opportunity to be a part of this study. She has provided me with the necessary guidance to successfully complete both my coursework and this project. I greatly appreciate everything she has done for me.
