

## List of Tables

Table		Page
1	Summary of dates and locations for field experiments.	18
2	Summary of agronomic measurements at the Blacksburg location in 1998.	21
3	Summary of insect ratings at the Blacksburg location in 1998.	21
4	Summary of insect ratings at the Whitethorne location in 1998.	21
5	Summary of agronomic measurements for full season corn at the Whitethorne location in 1999.	23
6	Summary of fungicide response for full season corn at the Whitethorne location in 1999.	24
7	Summary of agronomic measurements for full season corn at the Whitethorne location in 2000.	26
8	Summary of fungicide response for full season corn at the Whitethorne location in 2000.	26
9	Summary of measured responses to insecticide treatments for full season corn at the Whitethorne location in 2000.	27
10	Summary of fungicide response for double-cropped corn at the Whitethorne location in 2000.	28
11	Yield differences among insecticide treatments for double-cropped corn at the Whitethorne location in 2000.	28
12	Factors and weighting used in site suitability analysis for full season and double cropped corn.	32
13	Usual Planting and Harvesting Dates for Barley, Corn, and Wheat in Virginia (USDA NASS).	33
14	Degree-day (base 50) suitability classification for full season corn.	34
15	Degree-day (base 50) suitability classification for double-cropped corn.	34

16	Frost free days (mean) suitability classification for full season and double cropped corn.	35
17	Approximate accumulated MGDD units for corn development (95 -105 day relative maturity).	36
18	Classification of full season corn silking months PET-P.	38
19	Classification of double cropped corn silking months PET-P.	38
20	Classification of percent slope for full season and double cropped corn.	42
21	Classification of aspect (degrees) for full season and double cropped corn.	42
