Acknowledgments

The contributions and support of several individuals made this work possible. Foremost, I am grateful to my committee chair, Dr. Ruby Cox, for her insight into the Expanded Food and Nutrition Education Program (EFNEP) and Smart Choices Nutrition Education Program (SCNEP). Her guidance and resources certainly made this research possible. Her generosity, encouragement, and amiability contributed significantly to my ability to complete my graduate work and enjoy the process.

I also acknowledge my remaining committee members, Dr. Douglas Southard and Dr. Bonnie Billingsley, who provided invaluable feedback regarding the development and implementation of my study.

The statistical expertise of Clark Gaylord made the data analysis portion of this study possible. I truly learned more about statistics in our sessions than I had previously in any formal classroom. I’m thankful for his instruction on SAS programming (although I’m not quite certain of my gratitude for Vi) and his introduction to UNIX.

I also recognize the following program assistants that aided with the data collection and lesson delivery during this study: Carol Greear, Jo Combs, Patti Harden, Dorothy O’Quinn, Brenda Seamster, Carolyn Fenner, Wanda Evans, Mary Warren, Iris Miller, and Donna Walters. I would also like to express appreciation for the exceptional efforts of the EFNEP and SCNEP unit secretaries and area supervisors that ensured the processing and timely return of assessment forms.

Many thanks to Julie Haines at Pennsylvania State Cooperative Extension who assisted me with the background information concerning their Behavior Checklist.

In addition, I would like to thank Lesia Robertson, Mary Taylor, Sherry Terry, and Sherry Seville for their assistance during my graduate study. Likewise, I am grateful for the support and encouragement provided by the faculty and staff of the Department of Human Nutrition, Foods and Exercise at Virginia Polytechnic Institute & State University.

For those times when data collection seemed endless, I am grateful for the encouragement of my friends Lisa Alleyene and Karen Lillard and the support of my fellow graduate students.

I’d also like to thank my mother, Myrtle Hogbin, who reviewed those first drafts of my thesis; and my father, William Hogbin, who provided technical and software support for my computer.

Finally, I am grateful to Percy White who has shared my joys and difficulties during this period. It is with his support that I was able to complete my graduate studies.
