I am grateful for the guidance and patience demonstrated by Dr. Alan R. Esker during my graduate studies at Virginia Tech. I especially appreciate Dr. Esker's flexibility in meeting my unique time and education needs as a member of the military. In addition, I thank Dr. John R. Morris and Dr. Diego Troya for their insight into my research and for serving as members on my committee.

I also thank the members of the Esker research group for their invaluable assistance in the laboratory: Ufuk Karabiyik, Abdulaziz Kaya, Woojin Lee, Zelin Liu, Bingbing Li, Suolong Ni, Ritu Paul, Jae-Hyun Sim, Qiongdan Xie, and Wen Yin. I am especially indebted to Aziz Kaya for his assistance in setting up and calibrating the QCM and to Ritu Paul for her aid in creating LB-films of TPP.

I thank my wife for her generous love, patience, understanding and support through this hectic period of study and during the adjustments brought about by the birth of our first child. I also appreciate the love and support shown by my family and appreciate their assistance during the first few months of our daughter's life.

Finally, I thank the Lord Jesus Christ for the freedoms I now enjoy through His sacrifice.
