

List of Equations

Equation1. Hypothesis One, part 1.....	4
Equation2. Hypothesis One, part 2.....	4
Equation3. Hypothesis One, part 3.....	4
Equation4. Hypothesis Two, part 1.....	5
Equation5. Hypothesis Two, part 2.....	5
Equation6. Hypothesis Two, part 3.....	5
Equation7. The net rate of radiation heat exchange between a surface and its surroundings.....	13
Equation8. Sensible heat gain.....	13
Equation9. Solar energy flux component.....	14
Equation10. Incident angle calculation.....	21
Equation11. Solar altitude calculation.....	21
Equation12. Solar declination calculation.....	21
Equation13. Solar hour angle calculation.....	21
Equation14. Apparent solar time calculation.....	21
Equation15. Temperature increment over distance regression for Collector One.....	23
Equation16. Temperature increment over distance regression for Collector Two.....	23
Equation17. Temperature increment over distance regression for Collector Three.....	24
Equation18. Balance point temperature equation.....	30
Equation19. Balance point temperature calculation.....	30
Equation20. Daylight Factor calculation.....	31
Equation21. Air flow rate due to infiltration.....	32
Equation22. Heating season space heating energy collection calculation equation for the ranch house.....	36
Equation23. Heating season hot water preheating energy collection calculation equation for the ranch house.....	36
Equation24. Heating season space heating energy collection calculation equation for the two-story house.....	37
Equation25. Heating season hot water preheating energy collection calculation equation for the two-story house.....	37
Equation26. Cooling season hot water preheating energy collection calculation equation for the ranch house.....	44
Equation27. Cooling season hot water preheating energy collection calculation equation for the two-story house.....	44
Equation28. Regression for Collector One in temperature range from 30°F to 50°F.....	51
Equation29. Regression for Collector One in temperature range from 50°F to 70°F.....	51
Equation30. Regression for Collector One in temperature range from 70°F to 90°F.....	51
Equation31. Regression for Collector Two in temperature range from 30°F to 50°F.....	51
Equation32. Regression for Collector Two in temperature range from 50°F to 70°F.....	51
Equation33. Regression for Collector Two in temperature range from 70°F to 90°F.....	52
Equation34. Regression for Collector Three in temperature range from 30°F to 50°F.....	52
Equation35. Regression for Collector Three in temperature range from 50°F to 70°F.....	52
Equation36. Regression for Collector Three in temperature range from 70°F to 90°F.....	52
