

## ACKNOWLEDGEMENTS

I wish to express my most sincere gratitude and appreciation to Dr. Antoine G. Hobeika for his guidance, patience and encouragement throughout the development of the project. I would also like to thank Dr. Antonio Trani and the rest of the Transportation Division Faculty in the Civil Engineering Department for their assistance and help in the development of my program of study at Virginia Tech.

I would like to thank National Highway Institute, Turner Fairbank Highway Research Center (TFHRC) and FHWA for helping me to get the Eisenhower Research Fellowship. During my fellowship at TFHRC, I had the privilege of working with fellow students, researchers and center's staff such as M.Vasudevan, A. Barakawi, G. Mchale and J. Harding, who were there to answer all my questions.

I would also like to wish my deepest thanks to Dr Henry Lieu, who was instrumental in getting me started with the research and without whose help, guidance and patience, the thesis wouldn't have been successful. I am also sincerely grateful to Mr. Jim Clark for his guidance, advice and help rendered to me.

My parents, Chitra and G. Ramachandran watched me from a distance while I worked towards my degree. The completion of this thesis will mean a lot to them, particularly "seeing more of me". So I dedicate this project to my loving parents, without whose love, affection and encouragement this work would not have been possible.

I am also grateful to my roommate V. Srinivas and my uncle and aunt, my friends G. Kannan, P. Chand for helping me tremendously during the last two hectic weeks of my thesis work.

Finally I would like to thank my friends A. Shah, K. Deepak, P. Vianni, S. Vikram, R. Turochy for making my stay in Blacksburg a pleasant and memorable one.
