NATURAL FORMS: STIMULI FOR URBAN
ARCHITECTURE

By

Vernon Perkins

Paul Emmons, chair, Architecture Department

(ABSTRACT)

The implications of geology, climate, and season are studied for the purpose of generating ideas for appropriate design of a master plan for a city block and the details of an inn that is part of the master plan. The design is studied in the context of the Clarendon sector of Arlington County, Virginia. Clarendon was the old commercial center of Arlington, which generated numerous layers of urban form.

ACKNOWLEDGEMENTS

I wish to acknowledge Professor Michael J. O'Brien for his intellectual clarity, honesty, and commitment in the field of architecture and the quality of his teaching methods. I wish to acknowledge Professor Hunter Pittman for his strong sense of quality in design. I wish to acknowledge Professor David Lever for the depth of his research and the quality of his teaching methods. Thanks to Professors Hugh Munson, Mario Cortes, Mehdi Setareh, and Jim Jones for their commitment to and presentation of technical issues in architecture. Thanks to Professor Hans Rott for making sure that students were exposed to significant architectural achievements in Europe. I wish to thank Professor Paul Emmons for his patience in guiding me through the thesis process. I wish to thank Virginia Tech and the Commonwealth of Virginia for maintaining a fine architecture library at the Blacksburg campus, and for maintaining a high quality of infrastructure for education at the Blacksburg campus and at the facility in Riva San Vitale, Switzerland.

I wish to thank Dawn Arant, Karen Bengel, Cassidy Bolger, Flavio Carvalho, Michael Charles, Brian Fireman, William Gibson, Jason Hejduk, Art Holmes, Jennie Kang, Tza-jen Lin, Jennifer Merritt, Ed Novak, Steve Paxton, Garrett Pressick, Jennifer Rainey, Jay Sherlock, John Shorb, Randy Silag, Jay Smith, and Joyce Van Gilder, my fellow students, who made the experience worthwhile.
