Dedication

This thesis is dedicated to my mother, my brother, and my fiancée.
Acknowledgements

The author would like to express his gratitude to the chairman of his committee, Dr. Gerardo W. Flintsch, for his support and encouragement. Thanks are also due to the co-chairman, Dr. Imad L. Al-Qadi, for giving his time and expertise to help in the completion of this work. Thanks are also given to Dr. David A. Dillard for his helpful comments.

The author extends his heartfelt appreciation to his mother, Dr. Aicha Deff, his brother, Dr. Mohamed Elseifi, and his fiancée, Miss Marwa Hassan, for their unending support and understanding. Additionally, the assistance of the author's colleagues, especially Amara, Walid and Samer greatly contributed to the author's knowledge. Also, the assistance of Alex, Brian, Erin, Ramzi, Robin and Stacey contributed to the progress of this research.
# Table of Contents

**List of Figures**

vii

**List of Tables**

xv

## Chapter 1: Introduction

1. **Background**
2. **Historical Developments**
3. **Problem Statement**
4. **Objectives**
5. **Scope**

## Chapter 2: State of Knowledge

1. **Asphalt Cements**
   1.1. Production
   1.2. Structure and Chemistry of Asphalt Binders
   1.3. Asphalt Models
2. **Conventional Asphalt Binder Tests**
3. **SuperPave™ Asphalt Binder Tests and Specifications**
   3.1. SuperPave™ Physical tests for Asphalt Binders
4. **Polymer Modified Binder**
   4.1. Polymer Modifiers
   4.2. Polymer-Binder Mixing Process
5. **Linear Viscoelastic Theory**
   5.1. Constitutive Models
      5.1.1. The Basic Elements: Spring and Dashpot
      5.1.2. The Governing Differential Equation (GDE)
      5.1.3. The Harmonic Response Functions
2.5.1.4. Relations between Standard Response Functions Associated with Creep and Relaxation 33
2.5.1.5. Electromechanical Analogies 34
2.5.1.6. The Maxwell and Voigt Units 34
2.5.2. Continuous Time Spectra 36

2.6. Complex Shear Modulus Master Curves 39

2.7. Viscoelastic Response Models of Asphalt Binders 41
   2.7.1. Van der Poel's Nomograph 42
   2.7.2. Jongepier and Kuilman's Model 42
   2.7.3. Dobson's Model 43
   2.7.4. Dickinson and Witt's Model 44
   2.7.5. Christensen and Anderson's Model 45
   2.7.6. Gahvari's Model 46
   2.7.7. Stastna and Zanzotto's Model 47
   2.7.8. Marasteanu and Anderson's Model 48

2.8. Model Applicability to Polymer Modified Binders 49

Chapter 3: Experimental Program 51
3.1. Selection of Materials 51
3.2. Instruments Used in This Study 55
   3.2.1. Dynamic Shear Rheometer 55
   3.2.2. Rolling Thin Film Oven 58
   3.2.3. Pressure Aging Vessel 59
3.3. Modified-Asphalt Preparation 61
3.4. Designation of Binders 62
3.5. Dynamic Mechanical Analysis 62
   3.5.1. Strain Sweeps 62
   3.5.2. Frequency Sweeps 65
3.6. Master Curve Construction 65
Appendix B: Model Fitting for Proposed Complex Shear Modulus Equation 133

Appendix C: Model Fitting for Proposed Phase Angle Equation 148
