(ABSTRACT)

This thesis develops a philosophy for management, preservation, and interpretation of Woodlands Farm and Thomas’s Wharf in Northampton County on Virginia’s Eastern Shore. The U. S. Department of the Interior, National Park Service methodology for historic properties, including cultural landscapes, is used to complete this study. The National Park Service method includes four interrelated steps: (1) historical research, and (2) inventory and documentation of existing conditions, (3) site analysis and evaluation of significance and integrity, and (4) recommendations for future management.

Essential to the future of Woodlands Farm and Thomas’s Wharf is continued use of the property while retaining character defining features that make them significant. The most suitable management philosophy for a historic property that allows for protection and maintenance of significant features, as well as future use and development, is Rehabilitation.

Thomas’s Wharf’s significance is derived from fragments of many periods and histories can be read on the landscape; a palimpsest. The U.S. Department of the Interior, National Park Service evaluates a landscape much as one evaluates a historic building, defining it as a type or from a specific time period. The U.S. Department of the Interior’s criteria for significance does not address a landscape, like Thomas’s Wharf, as part of the continuum of history. Rather the study of landscapes is limited and the criteria does not acknowledge a site’s broader continuum of significance. Landscapes that are records of change and evolution, palimpsests of a people, culture, and place, need to be identified and deemed significant for that quality.
ACKNOWLEDGMENTS

Many thanks go out to those who supported my efforts. Their kind words and encouragement helped this work come to fruition.

Doris Adler kindly shared her home, research, and insights. Indefatigable, her energy and scholarship are an inspiration to my work.

Terry Clements, who willingly accepted the request to chair my committee, was the critical eye that guided this thesis. An inquiring and thoughtful mentor, she constantly challenged and supported me throughout the long months. Terry is a wonderful role model and friend, and I thank her profusely for her interest in my work.

Committee members Ron Kagawa and Betty Fine were pillars of strength. Their active participation and critical insights helped move the project along.

Frank Strassler gave unselfishly of his time, love, and hard work to get us through this project. His personal and professional enthusiasm for this project was contagious and spurred me on. We did it.

Finally, thanks to my family for their endless support of all my efforts.
