

## Table of Contents

CHAPTER 1 INTRODUCTION .....	1
1.1. Time - The Fourth Dimension .....	1
1.1.1. The Role of ITS in Managing Traffic Congestion .....	1
1.1.2. The Role of Operations Research in Transportation Engineering .....	1
1.2. Dynamic Traffic Routing.....	2
1.2.1. Past and Present Approaches to Routing .....	2
1.2.2. The ATIS Scenario .....	3
1.2.3. Example .....	3
1.2.4. Time-Dependent Shortest Path Algorithms .....	4
1.3. Motivation .....	5
1.3.1. Routing - Routing Algorithms For Static and Dynamic ITS Networks .....	5
1.3.2. A Comparison of Computer Networks and Future ITS Road Networks .....	6
1.3.3. What is a Routing Algorithm ? .....	6
1.3.4. Performance Measures for Routing Algorithms .....	7
1.3.5. A Comparative Study of Popular Routing Algorithms.....	9
1.3.6. System-Optimal Routing .....	10
1.3.7. Good and Bad Routing Algorithms .....	11
1.3.8. Distributed and Centralized Algorithms .....	12
1.3.9. Conclusions From the Study of Routing in Computer Networks .....	14
1.4. The Linear Programming Formulation of the Shortest Path Problem.....	14
1.4.1. The Primal Formulation.....	15
1.4.2. The Dual Formulation.....	15
1.4.3. Labeling Algorithms for the SP Problem .....	16
1.4.4. A Shortest Path Algorithm for a Network having Mixed Costs .....	16
CHAPTER 2 LITERATURE REVIEW .....	19
2.1 Deterministic Time-Dependent Shortest Path Algorithms .....	29
2.1.1 A Dynamic Programming Formulation for the TDSP Problem .....	19
2.1.2 Solving the TDSP problem using Dijkstra's Algorithm.....	21
2.1.3 The Case of Restricted Waiting at Nodes .....	22
2.1.4 First-in, First-Out (FIFO) Delays, Non-FIFO delays and Waiting Models .....	23
2.1.5 The Time-Space Network Formulation .....	27
2.1.6 User-Optimal Starting Time Considerations .....	29
2.1.7 An Efficient TDSP Algorithm for Practical Implementation .....	29
2.1.8 Modeling of Realistic Delay Functions for ATIS Applications .....	30
2.2 Stochastic Time-Dependent Shortest Paths - Hall's Procedure.....	32
2.2.1 The Branch-and-Bound Procedure of Hall .....	33
2.2.2 A Time-Space Network Formulation for the Stochastic SP Case .....	34
2.2.3 A Markov Chain Model for Stochastic Link Delays .....	34
2.2.4 Pareto-Optimal Paths .....	36
2.3 $k$ -Shortest Paths - Algorithms and Implementation Procedures .....	40
2.3.1 $k$ -Shortest Path Problem Formulation.....	40

2.3.2 $k$ -SP Obtained as Deviations from the Shortest Path.....	40
2.3.3 Labeling Algorithms for Solving the $k$ -SP .....	42
2.3.4 Adaptive Algorithms for a Fixed Destination $k$ -SP Problem.....	45
2.3.5 Lawler's Algorithm for $k$ -SPs having No Repeated Nodes .....	46
2.3.6 Special Forms of LS and LC Algorithms for the Single SP ( $k = 1$ ) Case.....	47
2.3.7 The Work of Mahmassani and the Authors of <i>DYNASMART</i> .....	48
2.4 Implementation Issues for Shortest Path Algorithms .....	50
2.4.1 Implementation Methods for LC Algorithms .....	50
2.4.2 Implementation Techniques for LS Algorithms .....	51
2.4.3 The Double-Ended Queue ( <i>DQ</i> ) .....	52
CHAPTER 3 A TIME-DEPENDENT $k$ -SHORTEST PATH ALGORITHM FOR ATIS APPLICATIONS .....	55
3.1. Extension of a Static $k$ -SP Algorithm to the Time-Dependent Case .....	55
3.2. Program TD- $k$ SP.....	60
3.2.1. Generation of Time-Dependent Link Delays.....	60
CHAPTER 4 OBJECT-ORIENTED DESIGN METHODS FOR SOFTWARE IMPLEMENTATION.....	62
4.1 Development of an Interactive Network Optimization Environment.....	62
4.2 Dynamic Data Structures and Shortest Path Classes .....	65
4.3 Object Oriented Analysis.....	66
4.3.1 Transforming the Problem Domain into a Conceptual Model.....	66
4.4 Object Oriented Design .....	68
4.4.1 Software Design Layout .....	68
4.4.2 Message Map and Class Relationships at the Macro Level.....	68
4.4.3 Class behaviors, responsibilities and definitions for design level model .....	69
4.4.4 Server Objects .....	70
4.4.5 The Service_Message (SM) object .....	71
4.4.6 Class Behaviors at the Analysis Level.....	75
4.4.7 Class Definitions/Responsibilities for a Simulation/Optimization Problem ....	76
4.5 C++ Class Implementations .....	80
4.6 Changing Scenarios, Analysis, and Client Needs.....	81
4.7 Integration of Shortest Path Algorithms within WAIMSS.....	83
CHAPTER 5 COMPUTATIONAL PERFORMANCE TESTS FOR ALGORITHM TD- $k$ SP .....	85
5.1. List of Tests Carried Out .....	85
5.2. The Random Network Generator Programs .....	85
5.2.1. The Random Connected Digraph.....	85
5.2.2. The Random Layered Network.....	87
5.3. Computational Results for Algorithm TD- $k$ SP .....	88
5.4. Multiple Regression Analysis.....	101

CHAPTER 6 SUMMARY AND CONCLUSIONS .....	108
6.1 Summary of Objectives .....	108
6.2 Summary of the Research Work Completed in this Study .....	108
6.3 Conclusions .....	110
6.4 Recommendations for Future Research.....	111
APPENDIX A DEFINITIONS FOR REGRESSION RESULTS (TABLES 16-18) ....	112
APPENDIX B PSEUDOCODE FORM OF ALGORITHM TD- <i>k</i> SP .....	116
REFERENCES .....	120

## List of Figures

Figure 1. A Simple Two-Route Case that Illustrates Routing Issues. ....	3
Figure 2. The Interaction of Routing and Flow Control. ....	8
Figure 3. A Case Where Multiple Shortest Paths are Necessary. ....	9
Figure 4. Good and Bad Routing Algorithms. ....	11
Figure 5. A Network Example with a Non-FIFO Link. ....	25
Figure 6. A Network Example with Random Time-Dependent Travel Times. ....	32
Figure 7. Message Map Diagram for the Client-Server Model. ....	69
Figure 8. A Class Scenario Diagram that Illustrates Message Passing. ....	75
Figure 9. A Class Scenario Diagram for a Vehicle Routing Problem. ....	80

## List of Tables

Table 1. Waiting Models for TDSP algorithms.....	24
Table 2. The Two-Way Sequence List.....	51
Table 3. Messages Processed by the Network Object. ....	70
Table 4. Class Structure for the Network, Message and Server Classes .....	73
Table 5. Class Structure for the Vehicle Routing Analysis Problem.....	78
Table 6. Computational Times (in seconds) for Extremely Sparse Random Networks	89
Table 7. Empirical Expressions for $T(\rho)$ and $T(m)$ .....	91
Table 8. Computational Times (in seconds) for Large Random Networks .....	93
Table 9. Computational Times (in seconds) for Varying values of $k$ .....	95
Table 10. Empirical Expression for $T(k)$ .....	96
Table 11. Computational Times for Varying Values of $M$ .....	97
Table 12. Empirical Expression for $T(M)$ .....	98
Table 13. Computational Times for Layered Networks .....	99
Table 14. Empirical Expressions for $T(m)$ .....	100
Table 15. Empirical Expressions for $T(m, \alpha)$ .....	100
Table 16. Multiple Regression Results for Random Networks and $\rho < 10\%$ .....	104
Table 17. Multiple Regression Results for Random Networks and Unrestricted $\rho$ .....	106
Table 18. Multiple Regression Results for Layered Networks .....	107
