NATIONAL SURVEY OF PLANETARIUM DIRECTORS OPERATING PUBLIC-SCHOOL-OWNED PLANETARIA

Robert J. Hitt Jr.

ABSTRACT

This is a descriptive quantitative study of public-school-owned and operated planetarium facilities across the United States. A random sample of 210 planetarium directors was selected, and 131 were used in the data analysis to benchmark current practices involving public school planetaria in five domains: (1) the job of planetarium director, (2) the curriculum used in public school planetaria, (3) the organization of the planetarium, (4) the facility, and (5) the directors.

Data were collected over a 10-week period in the spring of 1999 with a mail survey containing 72 questions. Frequency counts, percentages, means, and standard deviations were used to report the descriptive data. Results and conclusions are organized around each of the five domains.

The major conclusion is that planetaria in the nation’s public school systems are not in the educational mainstream as much as they were 20 years ago. Although some facilities appear to be well maintained and have added automation and new video equipment, a majority of the facilities are not properly maintained or supported by school administrators.
DEDICATION

To: My Mother and Father who always stressed the importance of a college education.
ACKNOWLEDGMENTS

Completing this dissertation was not an individual act. I would like to thank many people for their support in helping me complete this challenging but wonderful project:

The faculty of Virginia Tech are the first I would like to extend my sincere appreciation and thanks. Without their support and help this dissertation would not have been possible. In each class taken, the faculty offered encouragement and expert advise. I would like to acknowledge Dr. Bob Richards for his insight in my abilities to do the work and for allowing me to enter the doctoral program. I would like to acknowledge Dr. Mary Yakimowski for her research training, encouragement, and support. I would like to acknowledge my committee members, Dr. Dan Graves, Dr. Jennifer Sughrue, Dr. Stephen Parson, and Dr. Glen Earthman for their advise and friendly guidance in this study.

I am convinced that this dissertation would not have been completed without the support and help of my advisor, Dr. David Parks. I owe him more than any words can convey. I thank him for his constant “edits” and “re-writes” which helped make my study stronger and better. His dedication to my study and his diligent work will always be remembered with the warmest appreciation.

Lastly, I would like to thank my loving family and friends, and my study group (LyVonna, Ella, Pat, and Sam) for sticking together throughout this project. Everyone encouraged me and offered to help. I thank you all.
